The Temple of Fame and Friendship Annette

Richards, 2022-09-20 This book examines the renowned portrait collection assembled by C P E Bach J S Bach s second son One of the most celebrated German composers of the eighteenth century C P E Bach spent decades assembling an extensive portrait collection of some four hundred music related items from oil paintings to engraved prints The collection was dispersed after Bach s death in 1788 but with Annette Richards s painstaking reconstruction the portraits once again present a vivid panorama of music history and culture reanimating the sensibility and humor of Bach s time Far more than a mere multitude of faces Richards argues the collection was a major part of the composer s work that sought to establish music as an object of aesthetic philosophical and historical study The Temple of Fame and Friendship brings C P E Bach s collection to life giving readers a sense of what it was like for visitors to tour the portrait gallery and experience music in rooms thick with the faces of friends colleagues and forebears She uses the collection to analyze the portraitive aspect of Bach s music engaging with the influential theories of Swiss physiognomist Johann Caspar Lavater She also explores the collection as a mode of cultivating and preserving friendship connecting this to the culture of remembrance that resonates in Bach s domestic music Richards shows how the new music historiography of the late eighteenth century rich in anecdote memoir and verbal portrait was deeply indebted to portrait collecting and its negotiation between presence and detachment fact and feeling

jun 29 2022 alternating current circuits or ac circuits are simply circuits powered by an alternating source either current or voltage an alternating voltage or current is one in which the amount of either the voltage or the current alters about a distinct mean value and reverses direction periodically in an ac circuit the source voltage and current

ω represents the frequency of a sine wave when we write it this way $\sin \omega t$ if $\omega = 1$ the sin completes one cycle in 2π seconds if $\omega = 2\pi$ the sin completes one cycle sooner every 1 second for $f = 1$ if $\omega = 2\pi f$ the sin completes one cycle even faster every $1/f$ seconds or equivalently sin completes f cycles in 1 second
