Practical Practice Math Series: Math at Home , *The Internet for Radiologists* Davide Caramella,Paolo Pavone,2012-12-06 Davide Caramella Steffen Achenbach The world around us is changing at an unparalleled pace It is difficult to understand and describe the meaning of this process as no other revolution has involved so many people in such a short time In particular the Internet is about to influence all aspects of our lives In the late 1700s the industrial revolution

forced societies that previously lived on agricultural production to rethink the way they worked. The rapid speed of change also involved non-technical fields. New cities flourished, political systems were changed, the importance of the family was challenged, wars of a new size shook the world, and even landscapes were altered. After centuries of relatively stable economical and sociological conditions, people had to adjust to a new world in no more than a few decades. The information revolution is not willing to give us as much time. This is demonstrated by the short history of the World Wide Web (WWW) which started in 1990 and is growing so quickly that the users can only be estimated approximately. The last estimate that could be found at <http://etrg.findsvp.com> put the number of WWW users in excess of 50 Million in July 1997. Also in the field of radiology, a spectacular growth took place in the last few years in a paper published in the American Journal of Roentgenology (AJR). K. W.

In *Rationalist Pragmatism: A Framework for Moral Objectivism*, Mitchell Silver draws from a wide array of philosophical fields to formulate a comprehensive theory of ethics. He argues that an understanding of justification rooted in pragmatism leads to practical principles that apply to all those we would recognize as persons. The account bears implications for the nature of selfhood, the freedom of the will, the meaning of moral terms, the power of moral principles to motivate conceptions of truth, the nature of value, and the use and abuse of abstract moral theorizing. Rationalist Pragmatism develops its pragmatically informed morality in light of prominent ethical schools as well as relevant topics in the philosophy of language, metaphysics, and epistemology, including the correspondence theory of truth, inferentialist semantics, motivational internalism, the source of value, and experimental philosophy. Finally, Silver explores concrete moral and political implications of his theory, demonstrating that metaethics can affect positions regarding the morality of personal relations, the treatment of animals, and political assessments of democracy, socialism, and nationalism. Silver maintains that our interest in truth, our rational nature, as practical and theoretical beings, forms us as a community of mutually recognizing truth seekers.
