Radiation Protection In The Radiologic And Health Sciences:

Radiation Protection in the Radiologic and Health Sciences Marilyn E. Noz, Gerald Q. Maguire, 1985 **Radiation Protection in the Health Sciences** Marilyn E. Noz, Gerald Q. Maguire, 1995 **Radiation Protection In The Health Sciences** Marilyn E. Noz, Gerald Q. Maguire Jr, 1995-12-31 This book takes a very practical approach to presenting a readable source of radiation protection material for anyone working in the areas of radiological and health sciences. It is a suitable text on the subject for students preparing for careers as radiologic and nuclear medicine technologists for residents and for medical health physicists. It is a good reference guide for anyone using radiation in the health field including physicians. The first seven chapters consist of radiation protection principles which have general application. These include a discussion of instruments used in the field of radiation protection both for area and personnel monitoring which is rarely found elsewhere. Additionally, a description is given of SI units for radioactivity, exposure, absorbed dose, kerma, and effective equivalent dose, as well as risk assessment and the current recommendations of the International Commission on Radiation Protection (ICRP) and the United States National Council on Radiation Protection and Measurements (NCRP). The basic radiation protection principles of time, distance, and shielding are also discussed here. The next three chapters are concerned with the practical implementation in the workplace of the principles discussed earlier, including a chapter on specific recommendations for the safe use of common sources of radiation, the laws governing the use of these sources, and the calculation of shielding required for these various sources of radiation. The last two chapters detail the methods of calculating absorbed dose from internally deposited radionuclides, including a very lucid discussion of the method proposed by the Medical Internal Radiation Dose (MIRD) Committee of the Society of Nuclear Medicine, and external radiation, including a discussion of the Bragg-Gray method. Each chapter has self-assessment review questions and problems as a useful aid to retaining important information. The four appendices discuss the current status of the units and their current and former usage, as well as the concepts of logarithms. A complete glossary and set of references are also included. Answers to the problems are provided at the end of the book.

Radiation Protection in the Radiologic and Health Sciences Marilyn E. Noz, Gerald Q. Maguire, 1979 **Radiation Protection In The Health Sciences (With Problem Solutions Manual) (2nd Edition)** Marilyn E. Noz, Gerald Q. Maguire Jr, 2007-04-12 This book takes a very practical approach to radiation protection and presents very readable information for anyone working in the radiation field or with radioactive material. Offering information rarely found elsewhere, the authors describe in detail both the basic principles and practical implementation recommendations of radiation protection. Each chapter includes self-assessment review questions and problems with answers provided to help readers master important information. Coupled with a teacher's manual, this book is highly suitable as an undergraduate text for students preparing for careers as X-ray radiation oncology or nuclear medicine technologists. It can also be used as a reference for residents in radiology and radiation oncology, medical personnel, or anyone working with radioactive materials such as those involved in

homeland security emergency services or employed at a nuclear power plant
