Radiation-induced Cancer from Low-dose Exposure John W. Gofman,1990 Reviewed in New England Journal of Medicine February 14 1991 Strongly recommended excellent This book provides proof that even at the lowest possible doses dose rates exposure to ionizing radiation is carcinogenic contrary to speculation that repair may provide a threshold Additionally in an open checkable step by step analysis from raw data to conclusion Gofman shows that risk per dose unit is much higher than the radiation community s 1990 estimates that ionizing radiation may be the most important single carcinogen to which vast numbers of humans are actually exposed medically environmentally occupationally Gofman also includes chapters on Chernobyl induced cancers radio iodine induced thyroid cancer latency hormesis Gofman is a Ph D nuclear chemist 1943 a physician with an illustrious track record of discovery careful analysis correct forecasting in health research His new findings in Radiation Induced Cancer are essential input for policies toward cancer prevention radioactive waste handling nuclear power revival safe dose assumptions regarding radiation or other mutagens conflict of interest in research the problem of retroactively altered databases Reviewed in Choice January 1991 Thought provoking an important addition to the debate on the health effects of low dose radiation Advances in Mutagenesis Research Günter Obe,2013-03-07 Applied genetic research genetic toxicology and mutation research investigate the mutagenicity and cancerogenicity of chemicals and other agents Permanent mutation in genes and chromosomes can be induced by a plethora of agents including ionizing and nonionizing radiations chemicals and viruses Among the aspects discussed by Advances in Mutagenesis Research are 1 the understanding of the molecular mechanisms leading to mutations and 2 the prevention of a thoughtless introduction of mutagenic agents into the environment **Nuclear Regulatory Commission's Below Regulatory Concern (BRC) Policy** United States. The Scientists Who Alerted Us To The Dangers of Radiation Ian Fairlie, Cindy Folkers, 24-03-29 This book remembers and commemorates many brave radiation scientists most of whom are no longer with us These scientists published findings that radiation risks were more dangerous than officially accepted at the time However they often suffered as a result from official displeasure defamatory articles and public obloquy Scientific findings especially recently have revealed that these defamed and or disadvantaged scientists were actually correct in their assessments that official risk factors for radiation were too low and needed to be increased The lives of these scientists are discussed from early radiation pioneers including Ernest Rutherford Hermann Mueller and Linus Pauling to contemporary scientists such as Steve Wing

community's vain search for justice soon to be a feature documentary Kristen Iversen grew up in a small Colorado town close to Rocky Flats a secret nuclear weapons plant once designated the most contaminated site in America Full Body Burden is the story of a childhood and adolescence in the shadow of the Cold War in a landscape at once startlingly beautiful and unknown to those who lived there tainted with invisible yet deadly particles of plutonium It's also a book about the destructive power of secrets both family and government Her father's hidden liquor bottles the strange cancers in children in the neighborhood the truth about what was made at Rocky Flats best not to inquire too deeply into any of it But as Iversen grew older she began to ask questions and discovered some disturbing realities Based on extensive interviews FBI and EPA documents and class action testimony this taut beautifully written book is both captivating and unnerving *Storage and Disposition of Weapons-usable Fissile Materials*, 1996 *Dismantling the Bomb and Managing the Nuclear Materials* United States. Sunstein, 2002 Publisher Description **Under the Radar** Ellen Leopold, 2009 In Under the Radar Ellen Leopold shows how nearly every aspect of our understanding and discussion of cancer bears the imprint of its Cold War entanglement The current biases toward individual rather than corporate responsibility for rising incidence rates research that promotes treatment rather than prevention and therapies that can be patented and marketed all reflect a largely hidden history shaped by the Cold War Even the language we use to describe the disease such as the guiding metaphor for treatment fight fire with fire can be traced back to the middle of the twentieth century **Beyond Slash, Burn, and Poison** Marcy Jane Knopf-Newman, 2004 Drawing on the writings of Rachel Carson Betty Ford Rose Kushner and Audre Lorde this book explores the various ways in which patient centered texts continue to leave their mark on the political realm of breast cancer and ultimately the disease itself Ordered chronologically the selections trace the progression of discussions about breast cancer from a time when the subject was kept private and silent to when it became part of public discourse The texts included are personal accounts written by women struggling to play an active role in their healing process and at the same time hoping to help others do the same *Environmental Health Perspectives*, 1993 *Savannah River Plant, Aiken, Continued Operation of K-, L- and P-reactors*, 1990 **Megawatts and Megatons** Richard L. Garwin, Georges Charpak, 2002-12-15 In Megawatts and Megatons world renowned physicists Richard L Garwin and Georges Charpak offer an accessible eminently well informed primer on two of the most important issues of our time nuclear weapons and nuclear power They begin by explaining clearly and concisely how nuclear fission and fusion work in both warheads and reactors and how they can impact human health Making a strong and eloquent argument in favor of arms control Garwin and Charpak outline specific strategies for achieving this goal worldwide But they also demonstrate how nuclear power can provide an assured economically feasible and
