Rainforest Cities:

Ecology of Tropical Cities, Volume I Fabio Angeoletto, Piotr Tryjanowski, Mark D. E. Fellowes, 2025-04-15 This contributed volume addresses the global scale of urbanization and its impacts on biodiversity By adding human capital cities are incubators for new ideas and technologies creating the possibility for socially and environmentally sensitive growth but this is rarely seen Urban ecology an essential field that supports planning based on environmental perspectives is a new science in tropical countries This book discusses the social inequity embedded in tropical cities and explores how this inequity also materializes in biodiversity with poor neighborhoods of tropical cities lacking sufficient access to green space and therefore reduced access to the benefits of nature and poor support for biodiversity With the current biodiversity crisis the traditional approach to protecting pristine areas is insufficient The chapters in this volume illustrate how tropical cities can act as spaces for biological conservation Ecological literacy can help cities reconcile the needs of both people and of nature This book compiles studies by experts from more than 100 institutions and 29 countries on the ecology and biodiversity of tropical cities at multiple scales and applies their studies to urban planning and management The audience for this book includes researchers students and professionals working on environmental social economic cultural political architectural and development projects in urban areas offering a deep and timely discussion of their influence on the fauna and flora of tropical cities

Urban Jungle Ben Wilson, 2023-03-07 In this exhilarating look at cities past and future Ben Wilson proposes that in our world of rising seas and threatening weather the natural world may prove the city's savior Illuminating Wilson leaves readers with hope about the future of efforts to preserve the ecosystems that surround us as well as a new perspective that looks beyond the concrete and asphalt when walking along a city's streets Associated Press Since the beginning of civilization humans have built cities to wall nature out then glorified it in beloved but quite artificial parks In Urban Jungle Ben Wilson the author of Metropolis a seven thousand year history of cities that the Wall Street Journal called a towering achievement looks to the fraught relationship between nature and the city for clues to how the planet can survive in an age of climate crisis Whether it was the market farmers of Paris Germans in medieval forest cities or the Aztecs in the floating city of Tenochtitlan pre modern humans had an essential bond with nature But when the day came that water was piped in and food flown from distant fields that relationship was lost Today urban areas are the fastest growing habitat on Earth and in Urban Jungle Ben Wilson finds that we are at last acknowledging that human engineering is not enough to protect us from extremes of weather He takes us to places where efforts to rewild the city are under way to Los Angeles where the city's concrete river will run blue again to New York City where a bleak landfill will be a vast grassland preserve The pinnacle of this strategy will be Amsterdam a city that is its own ecosystem that makes no waste and produces its own energy In many cities Wilson finds nature is already thriving Koalas are settling in Brisbane wild boar may raid your picnic in Berlin Green canopies wildflowers wildlife the things that will help cities survive he notes also make people happy Urban Jungle offers the pleasures of history how backyard gardens spread exotic species all over the world how war produces biodiversity alongside a fantastic vision of the lush green cities of our future Climate change Ben Wilson believes is only the latest chapter in the dramatic human story

of nature and the city **Contemporary Ethnic Geographies in America** Christopher A. Airriess, 2015-09-28 Ethnic diversity has marked the United States from its inception and it is impossible to separate ethnicity from an understanding of the United States as a country and Americans as a people Since the 1965 Immigration and Nationality Act the United States has experienced watershed transformations in its social cultural and ethnic geographies Considering the impact of these wide ranging changes this unique text examines the experiences of a range of ethnic groups in both historical and contemporary context It begins by laying out a comprehensive conceptual framework that integrates immigration theory globalization transnational community formation and urban cultural and economic geography The contributors then present a rich set of case studies of the key Latin American Asian American and Middle Eastern communities comprising the vast majority of newer immigrants Each case offers a brief historical overview of the group s immigration experience and settlement patterns and discusses its contemporary socioeconomic dynamics All these communities have transformed and been transformed by the places in which they have settled Exploring these changing communities places and landscapes this book offers a nuanced understanding of the evolution of America s contemporary ethnic geographies **Wasted World** Rob Hengeveld, 2020-03-04 This biologist s monumental cri de Coeur for our planet offers a holistic view of our species the waste we produce and a path toward sustainability Nature In Wasted World Rob Hengeveld traces the entwined histories of population growth and resource consumption to reveal how our global waste crises came about As Hengeveld explains human life depends on energy which we first obtained through food Later we supplemented this with energy from water wind animals and finally fossil fuels as one source after another fell short of our ever growing needs Greater energy consumption has created greater waste including the atmospheric waste that is driving climate change As we face a web of interconnected problems addressing them individually will not work Instead Hengeveld argues we need to tackle their common cause our staggering population growth A practical look at the sustainability of our planet from a biologist and expert in the abundances and distributions of species Wasted World examines the whole process of using wasting and exhausting energy and material resources And by elucidating the complexity of the causes of our current global state Hengeveld offers us a way forward *Preserving Whose City?* Brian J. Godfrey, 2021-04-28 With Brazil s largest concentration of historic landmarks and famous landscapes Rio de Janeiro s passionate heritage debates have helped to define both the city and the country Taking a critical preservationist stance Brian Godfrey explores how historic designation and urban rebranding have shaped Rio s distinctive sense of place Official heritage programs date from the 1930s when federal authorities centralized power and promoted nationalism The city began a heritage based strategy of urban revitalization and rebranding in the 1980s the Cultural Corridor of historic places downtown Subsequent rediscovery of the old Little Africa district and continuing struggles of favela communities have emphasized narratives of counter memory against racism social injustice and governmental neglect Meanwhile environmental activism has encouraged programs to conserve the historic landscapes of

Rio's famous mountains, forests, beaches, and bays. While historic preservation often presumes to conserve or restore heritage sites according to a preexisting authenticity, Godfrey shows how the past actually becomes a resource for present-day interests. Memory brokers have guided the reinvention of historic places, determining whose past has been preserved. Debates over the right of remembrance he argues shape place memories and identities in this spectacular, if highly unequal, megacity which has much to teach the world about conserving cultural diversity and urban environments.

Latin America & the Caribbean Kevin Hillstrom, Laurie Collier Hillstrom, 2003-12-02 A concise yet thorough overview of the environmental issues, problems, and controversies facing Latin America and the Caribbean from the tip of South America to the Windward Islands. Home to Earth's longest mountain range, largest river, and greatest rainforest, no region boasts greater geographic extremes, faces greater environmental dangers, and enjoys more economic potential from its biodiversity than Latin America and the Caribbean. What are the political and economic factors affecting the Amazon's rapidly disappearing rainforest? What is being done to harvest life-saving drugs from the plants of the Orinoco? And what lies behind the mysterious disappearance of Central America's frogs? The work includes essays, tables, and figures, and an appendix titled "International Environmental and Developmental Agencies, Organizations, and Programs on the World Wide Web." Latin America the Caribbean examines a region waking up to its environmental problems and possibilities.

Conservation and Development Andrew Newsham, Shonil Bhagwat, 2015-12-22 Conservation and development share an intertwined history dating back to at least the 1700s. But what are the prospects for reconciling the two, and how far have we come with this project? This book explores these questions through a detailed consideration of the past, present, and future of the relationship between conservation and development. Bringing to bear conceptual resources from political ecology, social ecological systems thinking, and science and technology studies, *Conservation and Development* sets this relationship against the background of the political and economic processes implicated in environmental degradation and poverty alike. Whilst recognising that the need for reconciling conservation and development processes remains as compelling as ever, it demonstrates why trade-offs are more frequently encountered in practice than synergies. It also flags alternative visions for conservation and development, obscured or ignored by current framings and priorities. Bringing together policy and theory, *Conservation and Development* is an essential resource for undergraduate and postgraduate students and a useful reference for researchers in related fields. Each chapter contains a reading guide with discussion questions. The text is enlivened by a number of new case studies from around the world. A must-read for anyone interested in understanding the history, current state, and projections for future shifts in the relationship between conservation and development.

Planet of Slums Mike Davis, 2007-09-17 Celebrated urban theorist Davis provides a global overview of the diverse religious, ethnic, and political movements competing for the souls of the new urban poor.

City Life from Jakarta to Dakar AbdouMalik Simone, 2010-01-27 By showing how much of what is considered peripheral to urban life is actually critical to it, the book opens up new ways for understanding what it is possible to do in

cities from now on *The City as Power* Alexander C. Diener, Joshua Hagen, 2018-09-18 This interdisciplinary book considers national identity through the lens of urban spaces By bringing together scholars from a range of disciplines *The City as Power* provides broad comparative perspectives about the critical importance of urban landscapes as forums for creating maintaining and contesting identity and belonging Rather than serving as passive backdrops urban spaces and places are active mediums for defining categories of inclusion and exclusion With an international scope and ready appeal to visual learners the book offers a compelling survey of historical and contemporary efforts to enact state ideals express counter narratives and negotiate global trends in cities The contributors show how successive regimes reshape cityscapes to mirror their respective socio political agendas perspectives on history and assumptions of power Yet they must do so within the legal ethnic religious social economic and cultural geographies inherited from previous regimes Exploring the rich diversity of urban space place and national identity the book compares core elements of identity projects in a range of political cultural and socioeconomic settings By focusing on the built form and urban settings for social movements protest and even organized violence this timely book demonstrates that cities are not simply lived in but also lived through *Globalization and New Geographies of Conservation* Karl S. Zimmerer, 2006-09-15 Examining the geographical dimensions of environmental management and conservation activities implemented on landscapes worldwide *Globalization and New Geographies of Conservation* creates a new framework and collects original case studies to explore recent developments in the interaction of humans and their environment *Globalization and New Geographies of Conservation* makes four important arguments about the recent coupling of conservation and globalization that is reshaping the place of nature in human environmental change First it has led to an unprecedented number of spatial arrangements whose environmental management goals and prescribed activities vary along a spectrum from strict biodiversity protection to sustainable utilization involving agriculture food production and extractive activities Conservation and globalization are also leading by necessity to new scales of management in these activities that rely on environmental science thus shifting the spatial patterning of humans and the environment This interaction results as well in the unprecedented importance of boundaries and borders transnational border issues pose both opportunities and threats to global conservation proposed by organizations and institutions that are themselves international Lastly *Globalization and New Geographies of Conservation* argues that the local level has been integral to globalization while the regional level is often eclipsed at the peril of the successful implementation of conservation and management programs Bridging the gap between geography and life science *Globalization and New Geographies of Conservation* will appeal to a broad range of students of the environment conservation planning biodiversity management and development and globalization studies **Entangled Edens** Candace Slater, 2002 The skill with which Slater combines various levels and modalities of narrative utilizing her personal experience as a colorful unifying thread is truly remarkable Antonio Candido author of *Antonio Candido On Literature and Society* Howard S Becker

editor A very important book that quite gracefully elegantly and persuasively moves beyond the usual myth and history format to put at its center stories about the Amazon and the people who tell them Entangled Edens persuasively argues that the Amazon can only be grasped understood and come to terms with through its myths and stories It addresses a very real failing of modern environmentalism which for all its virtues tends to dehumanize and metaphorically depopulate when it does not villainize populations that do share its concerns or share them in very different ways Instead of forcing us to choose between land and people Slater uses the stories and the people who tell them to rethink human relations with nature and each other Richard White author of The Organic Machine The Remaking of the Columbia River Elegant erudite profoundly serious Entangled Edens is a source of inspiration and knowledge for the reader interested in the Amazon Without the cultural tradition and the life experience of Amazonia s people any analysis of the Amazon risks becoming inconsequential or opportunistic This is one of the powerful messages of this important reflection on the Amazon whose greatest riches are ultimately its people Candace Slater has written a book that will last Milton Hatoum author of The Tree of the Seventh Heaven 1994 and The Brothers 2002 Global Environmental Politics Johannes Urpelainen, 2022-07-29 Emerging economies have fundamentally transformed global environmental politics Led by China and India they increasingly make or break international negotiations which now require agreement among a large number of governments with widely varied preferences Emerging economies which still suffer from widespread poverty and frequently struggle with policy implementation often feel that Western led initiatives neglect their needs What does the global environmental policy landscape look like in the age of a rising Global South This book explains why emerging economies have come to dominate global environmental politics and examines the implications for future international cooperation Johannes Urpelainen shows that emerging economies continue to prioritize economic growth and often have limited institutional capacity to contain the environmental destruction that it causes However he argues despite barriers to cooperation innovative bargaining and institutional design offer a way forward Bottom up agreements that respect national sovereignty and invest in capacity building hold more promise than traditional top down treaties with binding commitments The book features detailed discussions of attempts to address hazardous chemicals loss of biodiversity and climate change a comparative analysis of China and India and case studies of nine other emerging economies around the world Global Environmental Politics is an essential forward looking overview of today s most pressing international issue
