The

Biogeochemistry of the Amazon Basin Michael E. McClain, Reynaldo Victoria, Jeffrey E. Richey, 2001-11-08 With a complex assemblage of largely intact ecosystems that support the earth's greatest diversity of life the Amazon basin is a focal point of international scientific interest And as development and colonization schemes transform the landscape in increasing measure scientists from around the world are directing attention to questions of regional and global significance Some of these questions are What are the fluxes of greenhouse gases across the atmospheric interface of ecosystems How much carbon is stored in the biomass and soils of the basin How are elements from the land transferred to the basin's surface waters What is the sum of elements transferred from land to ocean and what is its marine fate This book of original chapters by experts in chemical and biological oceanography tropical agronomy and biology and the atmospheric sciences will address these and other important questions with the aim of synthesizing the current knowledge of biochemical processes operating within and between the various ecosystems in the Amazon basin

Advanced Computational Techniques for Sustainable Computing Megha Rathi, Adwitiya Sinha, 2022-07-25 Advanced Computational Techniques for Sustainable Computing is considered a multi-disciplinary field encompassing advanced computational techniques across several domains including Computer Science Statistical Computation and Electronics Engineering The core idea of sustainable computing is to deploy algorithms models policies and protocols to improve energy efficiency and management of resources enhancing ecological balance biological sustenance and other services on societal contexts The book offers a comprehensive coverage of some of the most essential topics It provides an insight on building smart sustainable solutions Includes details of applying machine learning IOT and sensor based techniques for sustainable computing Entails data extraction from various sources followed with pre-processing of data and how to make effective use of extracted data for application based research Involves practical usage of data analytic language including R Python etc for improving sustainable services offered by multi-disciplinary domains Encompasses comparison and analysis of recent technologies and trends Includes development of smart models for information gain and effective decision making with visualization The readers would get acquainted with the utilization of massive data sets for intelligent mining and processing It includes the integration of data mining techniques for effective decision making in the social economic and global environmental domains to achieve sustainability The implementation of computational frameworks can be accomplished using open source software for the building of resource efficient models The content of the book demonstrates the usage of data science and the internet of things for the advent of smart and realistic solutions for attaining sustainability

Ecophysiology of Tropical Plants

Sachchidanand Tripathi, Rahul Bhadouria, Pratap Srivastava, Rishikesh Singh, Rajkumari Sanayaima Devi, 2023-10-03 Plants in tropical regions are coping with enormous challenges of physiological stresses owing to changing environmental and climatic conditions. Rapid growth of human population and rampant exploitation of fossil fuels and other developmental activities are actively contributing to such perturbations. The Intergovernmental Panel on Climate Change has projected a sustained increase in carbon dioxide CO₂ emissions and thereby a rise in global temperature in the coming decades. The resultant changes in precipitation patterns are now evident across the globe due to intensification of hydrological cycle. Moreover, gaseous and particulate pollutants are also an immense challenge for tropical plants. Such vagaries in environmental conditions have significant impacts on the ecophysiological traits of plants resulting from altered interactions of tropical plants with each other as well as other biotic and abiotic components within the ecosystem. Books available in the market that particularly focus on ecophysiological responses of tropical plants to abiotic and biotic environmental factors under climate change are limited. This book intends to fill this knowledge gap and provides a detailed analysis on ecophysiological responses of tropical plants to these environmental challenges as well as suggesting some approachable measures for plant adaptations to these challenges. The book is equally applicable to undergraduate and postgraduate students, researchers, teachers, and forest managers and policy makers. Salient features of the book are: A comprehensive discussion on adaptive mechanisms of plants through their ecophysiological responses to various biotic and abiotic stresses; Elaboration on the recent techniques involved in ecophysiological research; A detailed account of evolutionary responses of plants to changing climate; Discussion of recent research results and some pointers to future advancements in ecophysiological research; Presentation of information in a way that is accessible for students, researchers, and teachers practicing in plant physiology and ecology.

[Amazon Tribes](#) Mira Donnelly, AI, 2025-03-19 Amazon Tribes explores the history and present day realities of the Amazon's Indigenous peoples, shedding light on their cultures, survival strategies, and struggles against external forces. These tribes have thrived for millennia in the rainforest, developing intricate social structures and sustainable living practices that offer valuable lessons for contemporary society. The book examines their complex relationship with the environment, showcasing their traditional knowledge systems and resistance to globalization, resource extraction, and deforestation. It highlights the crucial role these communities play in the Amazon's conservation, emphasizing the importance of cultural preservation and land rights. The book progresses chronologically, beginning with an introduction to the diverse tribes and their unique characteristics. It then traces their history from pre-Columbian times to the present, highlighting interactions with colonizers, missionaries, and modern developers. A key focus is on the tribes' survival strategies, such as sustainable agriculture and medicinal practices, demonstrating their deep understanding of the rainforest ecosystem. The book also details their resistance to external pressures, showcasing their ongoing fight to protect their lands and cultures. The study

uses anthropological studies historical documents and first person narratives offering a balanced and nuanced perspective on the challenges faced by these communities It connects to broader discussions about environmentalism human rights and sustainable development challenging readers to reconsider dominant narratives of progress **Four Neotropical**

ICYMARE - Early Career Researchers in Marine Science Simon Jungblut, Carolin Müller, Lena Rölfer, Yvonne Schadewell,2025-06-05 The International Conference for Young Marine Researchers ICYMARE is a recently founded bottom up driven networking initiative ICYMARE conducts an annual on site conference event as well as a monthly Online Forum to foster international exchange and networking among marine early career researchers In both cases on site conference and Online Forum the early careers organize and conduct the whole event but also identify the conference topics and prepare and moderate their topical sessions This Research Topic aims to feature articles authored by early career researchers who were involved as a conference or Online Forum session hosts in the ICYMARE initiative As emerging experts in their respective fields of marine science they are invited to contribute review articles on specific topics within the topical frame of their ICYMARE conference session Thus articles on this Research Topic may come from all fields of marine sciences as it reflects the scope of the ICYMARE conferences Tropical Fire Ecology Mark Cochrane,2010-04-11 The tropics are home to most of the world s biodiversity and are currently the frontier for human settlement Tropical ecosystems are being converted to agricultural and other land uses at unprecedented rates Land conversion and maintenance almost always rely on fire and because of this fire is now more prevalent in the tropics than anywhere else on Earth Despite pervasive fire human settlement and threatened biodiversity there is little comprehensive information available on fire and its effects in tropical ecosystems Tropical deforestation especially in rainforests has been widely documented for many years Forests are cut down and allowed to dry before being burned to remove biomass and release nutrients to grow crops However fires do not always stop at the borders of cleared forests Tremendously damaging fires are increasingly spreading into forests that were never evolutionarily prepared for wild fires The largest fires on the planet in recent decades have occurred in tropical forests and burned millions of hectares in several countries The numerous ecosystems of the tropics have differing levels of fire resistance resilience or dependence At present there is little appreciation of the seriousness of the wild fire situation in tropical rainforests but there is even less understanding of the role that fire plays in the ecology of many fire adapted tropical ecosystems such as savannas grasslands and other forest types *LLM* *LLM* *LLM* *LLM* *LLM*,2025-04-14 AI LLM AI LLM LLM AI AI AI
