Rains Asia An Assessment Model For Acid Deposition In Asia:

Rains-Asia Robert J. Downing, Ramesh Ramankutty, Jitendra J. Shah, 1997-01-01 Asia's rapid economic growth has fueled a growing appetite for commercial energy which is satisfied by fossil fuels that emit pollutants. These pollutants are oxidized and transported into the atmosphere creating acidic depositions known as acid rain that can damage foliage, soils, and surface waters. At current energy consumption growth rates by the year 2000, sulfur dioxide emissions from Asia will surpass the emissions of North America and Europe combined. RAINS ASIA is an assessment tool developed by the World Bank, the Asian Development Bank, and donors to study the implications of alternative energy development strategies for air pollution and acid rain and to help identify cost-effective abatement methods. This report provides an overview of the model and some results of analyses that have been conducted as part of the RAINS ASIA program. *Acid Rain - Deposition to Recovery* Peter Brimblecombe, Hiroshi Hara, Daniel Houle, Martin Novak, 2007-12-11 This book looks at the sources and composition of the atmosphere and rainfall with particular attention on acidifying components and those that affect ecosystems. It further widens the subject to look at trace metals. It includes papers on the impact of deposition on soils and forests and the recovery of the natural environment. Work on critical loads makes a contribution to understanding the degree to which deposition must be reduced to limit its impact. **Acid rain 2000** Kenichi Satake, 2012-12-06 The Acid Rain 2000 Conference in Tsukuba, Japan, held 10-16 December 2000, was the sixth such conference in the series starting with Columbus, Ohio, USA in 1975 and including Sandefjord, Norway in 1980; Muskoka, Canada in 1985; Glasgow, UK in 1990; and Gteborg, Sweden in 1995. This series of International Conferences on the acid rain problem has made a very important contribution to the process of summarising the state of current understanding and making this information available. In the 6th Conference, approximately 600 papers were presented, including talks and posters. About 300 peer-reviewed papers from the presentation appear in this volume and will provide readers with a comprehensive review of the history and scientific aspects of the acid rain problem. The papers appear in three volumes: the first containing the plenary and keynote papers, and the other two the remaining scientific papers. Volume 1 ISBN 0 7923 7132 1; Volume 2 ISBN 0 7923 7133 X; Volume 3 ISBN 0 7923 7134 8. The Conference was arranged under the joint auspices of The Science Council of Japan, The Japanese Society of Limnology, representative academic society, Japan Association of Aerosol Science and Technology, The Japan Society for Analytical Chemistry, Japan Society for Atmospheric Environment, Chemical Society of Japan, The Ecological Society of Japan, The Japanese Society of Environmental Education, Society of Environmental Science, Japan, The Japanese Forestry Society, Japanese Society of Snow and Ice, Japanese Society of Soil Science and Plant Nutrition, and Japan Society on Water Environment, with the cooperation of Ibaraki Prefecture and Japan Environment Agency. The Oxford Companion to Global Change David J. Cuff, 2008 In recent years, global change has become increasingly important in technological, ecological, and political spheres. This companion examines the environmental events of recent times and investigates long-term trends as well as broader issues of global

change **Asia Pacific Journal of Environmental Law** ,2002 *Economic Policies for Sustainable Development* Thomas Sterner,2012-12-06 This book focuses on describing policy instruments in different countries Its purpose is not only descriptive but also to some extent advocacy We believe that economic instruments can make an important contribution to an environmentally less disruptive path of development The design of economic instruments is however a fine art and depends among other things on their political acceptability and this acceptability is of course influenced by experience It is therefore important to provide information on the use of policy instruments in other countries Policies are currently developing quite fast and thus a book such as this one can inevitably not capture more than a snapshot view at a single moment of time We would hope that the book encourages more experimentation with economic instruments and that countries will make a fuller use of the whole arsenal of economic policy instruments If the book does succeed in this sense then it will soon become dated as policies change but that would be a price well worth paying The book combines a dozen country monographs together with a few international surveys on particular topics gasoline pricing vehicle regulations acid rain deforestation and global warming These papers are intended to illustrate the diversity of policy options available The actual policies adopted depend on economic as well as ecological conditions The country studies cover two Western countries and then concentrate on formerly planned and developing countries They show that economic instruments are still generally thought of as new and innovative *Acid Rain in Nepal?* Arnico Kumar Panday,1998 *Acid Deposition and Ecosystem Sensitivity in East Asia* Vladimir Nikolaevich Bashkin,Soon-Ung Park,1998 The rapid growth of industrialisation and urbanisation and a significant increase in agricultural production in East Asia have caused a remarkable increase in SO₂ and NO_x emissions during past several decades The consequences of these growing emissions have been closely connected with enforced acidification loading in ecosystems and that results in actual and potential risk on many sensitive ecosystems Until now only some preliminary attempts have been made to calculate the acidification loading in Asia Thus the main goal of this international project is to gather the existing information on the acid deposition and ecosystem sensitivity in East Asia from the national research teams This volume will provide useful information in developing more profound insight into the complexity of air pollution and its interaction with ecosystems in East Asia **Ecological Security in Northeast Asia** Miranda Alice Schreurs,Dennis Pirages,1998 **Japanese Progress in Climatology** ,2001 *Pacific and Asian Journal of Energy* ,2001 **World Resources 1998-99** World Resources Institute,1998 This is the 8th edition in a series which provides an authoritative assessment of the world s natural resource base This edition focuses on the relationship between environmental change and human health Drawing on the latest scientific data it explores how environmental conditions contribute to death and disease around the world and how that may change in the coming decades *Asia* Kevin Hillstrom,Laurie Collier Hillstrom,2003-06-23 A concise yet thorough overview of the environmental issues problems and controversies facing the world s largest and most populous continent Asia Asia tackles the tough issues the complex

problems and the political controversies surrounding the environment of this vast landmass This volume encompasses everything from economics land use energy and transportation to air pollution rivers and lakes oceans and species and habitat protection In Malaysia unchecked discharges of industrial waste and human sewage led the government to label 42 of its rivers officially dead According to some estimates Southeast Asia alone accounts for more than half of the world s total transport of sediment to the oceans In the Philippines the Chico River dam project which would have subjected 100 000 tribespeople to relocation was canceled when the World Bank withdrew funding after fierce resistance from the indigenous people This fascinating book offers a comprehensive look at how the most populated continent on earth contends with its complicated environment
