1 What is Riverbank Filtration The purpose of this book is to show that riverbank filtration RBF is a low cost and efficient alternative water treatment for drinking water applications There are two immediate benefits to the increased use of RBF Minimized need for adding chemicals like disinfectants and coagulants to surface water to control pathogens Decreased costs to the community without increased risk to human health But what exactly is RBF In humid regions river water naturally percolates through the ground into aquifers which are layers of sand and gravel that contain water underground during high flow conditions In arid regions most rivers lose flow and the percolating water passes through soil and aquifer material until it reaches the water table During these percolation processes potential contaminants present in river water are filtered and attenuated If there are no other contaminants present in the aquifer or if the respective contaminants are present at lower concentrations the quality of water in the aquifer can be of higher quality than that found in the river In RBF production wells which are placed near the banks of rivers pump large quantities of water

Riverbank Filtration Hydrology Stephen A. Hubbs, 2007-11-04 Riverbank Filtration RBF has gained popularity in the past decade as an excellent source of high quality water for public water supply This text compliments the existing literature on RBF water quality and provides much needed guidance in the design and operation of RBF facilities RBF has proven effective in many hydrogeological settings worldwide and can be an excellent solution to water supply problems in both developed and developing countries Topics covered include surface stream hydrology particle clogging and biological geochemical processes Data and case histories are provided from dozens of installations providing much needed practical information regarding RBF design operation and performance This book provides the necessary tools to evaluate potential RBF sites and is a must have if you are considering RBF as a source of water supply

Riverbank Filtration for Water Security in Desert Countries Chittaranjan Ray, Mohamed Shamrukh, 2010-12-14 Riverbank filtration is a low cost yet efficient water treatment technology It has most potential to provide safe drinking water to large cities located along rivers or lakes In particular it is ideal for large population centres in developing countries where the cost of building extensive treatment facilities is prohibitive Water filtration can be successfully implemented using naturally occurring sand and gravel along the river lake banks The cost of water produced by this means is much lower than that of water treated in conventional treatment plants Authored by a multi disciplinary team of experts this volume addresses the scientific basis of the filtration process and also numerous topics of importance for the planning technical realization and security of such plants Their application for the removal of relevant chemical pollutants and a variety of pathogens is analysed in detail

Efficiency of Bank Filtration and Post-Treatment Thomas Grischek, Chittaranjan Ray, 2019-08-08 This book is a printed edition of the Special Issue Efficiency of Bank Filtration and Post Treatment that was published in **Water Drinking Water Treatment** Eckhard Worch, 2019-10-08 This publication provides the scientific fundamentals for understanding chemical physical and biological processes that are used in drinking water treatment such as filtration coagulation softening deironing demanganization and others Written in a compact and easily accessible form the book is focused on the objectives the theoretical basics and the practical implementation of the treatment processes *Anthropogenic Aquifer Recharge* Robert G. Maliva, 2019-05-07 The book is an overview of the diversity of anthropogenic aquifer recharge AAR techniques that use aquifers to store and treat water It focusses on the processes and the hydrogeological and geochemical factors that affect their performance This book is written from an applied perspective with a focus of taking advantage of global historical experiences both positive and negative as a guide to future implementation Most AAR techniques are now mature technologies in that they have been employed for some time their scientific background is well understood and their initial operational challenges and associated solutions have been identified However opportunities exist for improved implementation and some recently employed and potential future innovations are presented AAR which includes managed aquifer recharge MAR is a very important area of water resources management and there is no recent books that specifically and comprehensively addresses the subject **Arid Lands Water Evaluation and Management** Robert Maliva, Thomas Missimer, 2012-06-09 A large part of the global population lives in arid lands which have low rainfall and often lack the water required for sustainable population and economic growth This book presents a comprehensive description of the hydrogeology and hydrologic processes at work in arid lands It describes the techniques that can be used to assess and manage the water resources of these areas with an emphasis on groundwater resources including recent advances in hydrologic evaluation and the differences between how aquifer systems behave in arid lands versus more humid areas Water management techniques are described and summarized to show how a more comprehensive approach to water management is required in these areas including the need to be aware of cultural sensitivities and conditions unique to many arid regions The integration of existing resources with the addition of new water sources such as desalination of brackish water and seawater along with reusing treated wastewater will be required to meet future water supply needs Also changing climatic conditions will force water management systems to be more robust so that future water supply demands can be met as droughts become more intense and rainfall events become more intense A range of water management techniques are described and discussed in order to illustrate the methods for integrating these measures within the context of arid lands conditions Natural Water Treatment Systems for Safe and Sustainable Water Supply in the Indian Context: Saph Pani Thomas Wintgens, Anders Nattorp, Lakshmanan Elango, Shyam R. Asolekar, 2016-07-15 Natural Water Treatment Systems for Safe and Sustainable Water Supply in the Indian Context is based on the work from the Saph Pani project Hindi word

Multiple Objective Treatment Aspects of Bank Filtration Sung Kyu Maeng, 2023-05-09 Bank filtration BF is a natural water treatment process which induces surface water to flow in response to a hydraulic gradient through soil sediment and into a vertical or horizontal well It is a relatively cost effective robust and sustainable technology From a historical perspective BF is first mentioned in the bible and the process has been recognized as a proven method for drinking water treatment in Europe for more than 100 years However the mechanisms of removal of different contaminants during BF are not fully understood This study showed that BF is an effective multiple objective barrier for removal of different contaminants present in surface water sources including bulk organic matter and organic micropollutants OMPs like pharmaceutically active compounds and endocrine disrupting compounds It was found that biodegradation and adsorption play primary and secondary roles respectively in the removal of OMPs during soil passage Furthermore using field data from BF sites and chemical properties of OMPs models were developed to estimate the removal of OMPs during soil passage It can be concluded that the removal efficiencies of BF for these contaminants can be maximised by proper design and operation of recovery wells taking into consideration source water quality characteristics and local hydrogeological conditions
