Flow Control to Manage River Ice Andrew M. Tuthill,1999 This report describes flow control methods for reducing ice problems in rivers Objectives include reducing ice interference with winter hydroelectric production and navigation ice jam flood mitigation as well as ensuring minimum winter flows for fish and water supply The winter season is divided into three periods During early winter the main objective of flow control is to promote the rapid formation of a smooth stable ice cover For the midwinter period the aim of the river regulation is to maintain an intact ice cover and avoid premature ice breakup During the final winter period the goal is to minimize adverse effects of ice breakup Examples illustrate the methods and objectives emphasizing innovative approaches Available flow regulation planning tools are described and valuable research directions identified Ice Breakup on the Chena River 1975 and 1976 Terry T. McFadden,Charles M. Collins,1977

River Ice Jams S. Beltaos,1995 Trends in Streamflow, River Ice, and Snowpack for Coastal River Basins in Maine During the 20th Century Robert W. Dudley,2002 Morphology, Hydraulics and Sediment Transport of an Ice-covered River Cold Regions Research and Engineering Laboratory (U.S.),1986 This initial study of the ice covered Tanana River near Fairbanks Alaska attempted to 1 establish field methods for systematic and repetitive quantitative analyses of an ice covered river s regime 2 evaluate the instruments and equipment for sampling and 3 obtain the initial data of a long term study of ice cover effects on the morphology hydraulics and sediment transport of a braided river A methodology was established and detailed measurements and samplings including profiling by geophysical techniques were conducted along cross sections of the river A small portable rotary drill rig equipped with a 356 mm 14 in ice auger was used to cut large diameter holes in the ice cover for through the ice measurements Portable heat sources and a heated shelter were required to continuously thaw and dry equipment for the repetitive measurements Measurements included ice cover thickness water level water depth temperature flow velocity suspended load and bed load frazil ice distribution and bed material composition Remotely gathered data included apparent resistivity and subsurface radar profiling The various techniques sampling gear and

problems encountered during use in the subfreezing cold are described in detail in this report *Ice Jam Flooding on the Missouri River Near Williston, North Dakota*, **River Ice Processes and Ice Flood Forecasting** Karl-Erich Lindenschmidt, 2019-09-25 This book exposes practitioners and students to the theory and application of river and lake ice processes to gain a better understanding of these processes for modelling and forecasting It focuses on the following processes of the surface water ice freeze up ice cover thickening ice cover breakup and ice jamming The reader will receive a fundamental understanding of the physical processes of each component and how they are applied in monitoring and modelling ice covers during the winter season and forecasting ice floods Exercises accompany each component to reinforce the theoretical principles learned These exercises will also expose the reader to different tools to process data such as space borne remote sensing imagery for ice cover classification A thread supporting numerical modelling of river ice and lake ice processes runs through the book *River Ice Data Instrumentation*, **The Forms of Water in Clouds and Rivers, Ice and Glaciers** John Tyndall, 1896 **Gravel Bed Rivers** Michael Church, Pascale Biron, Andre Roy, 2012-02-10 Gravel Bed Rivers Processes Tools Environments presents a definitive review of current knowledge of gravel bed rivers derived from the 7th International Gravel bed Rivers Workshop the 5 yearly meeting of the world's leading authorities in the field Each chapter in the book has been specifically commissioned to represent areas in which recent progress has been made in the field The topics covered also represent a coherent progression through the principal areas of the subject hydraulics sediment transport river morphology tools and methods applications of science Definitive review of the current knowledge of gravel bed rivers Coverage of both fundamental and applied topics Edited by leading academics with contributions from key researchers Thoroughly edited for quality and consistency to provide coherent and logical progression through the principal areas of the subject *A Mathematical Model for River Ice Processes* A. M. Wasantha Lal, Hung Tao Shen, 1993 **The Forms of Water in Clouds & Rivers, Ice & Glaciers by John Tyndall** John Tyndall, 1874 **Design Factors for River Ice Booms Analyzed** A. M. Latyshenkov, 1975 Model studies were made to determine hydraulic characteristics of structures for protecting ships wintering in rivers under conditions similar to those observed in European and Siberian rivers ice cover thickness up to 1.8m and river depth to 12m The experiments are described and data are mathematically analyzed Formulas and graphs for calculating the stresses as a function of ice cover thickness flow speed and width and depth of the river are suggested The ice pressure on protective booms in a stream wider than 30 m was found to increase 85-90% due to the friction between the lower ice surface and flowing water The friction coefficient is proportional to the ratio of ice thickness to flow depth Maximum Thickness and Subsequent Decay of Lake, River, and Fast Sea Ice in Canada and Alaska Michael A. Bilello, 1980 Analyses weekly measurements of thickness of these ices made over period of 10 to 15 years at 66 locations Studies especially effect of thawing temperatures
