

TOP 5 WAYS

WELDERS ARE KILLED

POISONOUS FUMES/GASES

Whether it's the materials being welded, the type of welding being done, and solvents used to prepare surfaces being welded, **ALL WELDING PRODUCES POISONOUS FUMES AND GASES!** Though gases such as carbon monoxide can kill immediately, most of the chemicals and heavy metals released into the air through welding produce chronic and progressive conditions which kill over time (e.g., emphysema and cancers). Risk reduction includes: Reading and understanding Safety Data Sheets of ALL materials/products being used and following the recommended protocols. Only weld materials you have been qualified to work on.

ELECTROCUTION

Don't become part of the circuit.

Risk reduction includes: Avoiding work in wet conditions. Always using dry gloves. (Change gloves if they become moist.)

MELANOMAS [SKIN CANCERS]

These can form on eyes as well as skin from exposure to UV radiation. Risk reduction includes: Always using appropriate PPE to cover any skin that can be exposed.

EXPLOSIONS

- **Pressurised cans with explosive propellants (e.g., WD40).** Risk reduction includes: Keeping such containers at a safe distance from work space.
- **Containers/Drums with residual explosive vapours inside.** Risk reduction includes: Ensuring all containers are PROPERLY cleaned and tested.

FALLS FROM HEIGHT

Never work anywhere there is ANY chance of falling to a lower level and being injured! Only work when there are appropriate fall prevention methods in place.
