Aquaculture, Innovation and Social Transformation Keith Culver, David Castle, 2008-09-15

Keith Culver and David Castle Introduction Aquaculture is at the leading edge of a surprisingly polarized debate about the way we produce our food According to the United Nations Food and Agriculture Organization aquaculture production has increased 8.8% per year since 1970 far surpassing productivity gains in terrestrial meat production at 2.8% in the same period FAO 2007 Like the green revolution before it the blue revolution in aquaculture promises rapidly increased productivity through technology driven intensification of aquaculture animal and plant production Costa Pierce 2002 The Economist 2003 Proponents of further aquaculture development emphasize aquaculture's ancient origins and potential to contribute to global food security during an unprecedented collapse in global fisheries World Fish Center Meyers and Worm 2003 Worm et al 2006 For them technology driven intensification is an ordinary and unremarkable extension of past practice Opponents counter with images of marine and freshwater environments devastated by intensive aquaculture practices producing unsustainable and unhealthy food products They view the promised revolution as a scam nothing more than clever marketing by profit hungry shareholders looking for ways to distract the public from the real harms done by aquaculture The stark contrast between proponents and opponents of modern aquaculture recalls decades of disputes about intensive terrestrial plant and animal agriculture disputes whose vigor shows that the debate is about much more than food production Ruse and Castle 2002

Governability of Fisheries and Aquaculture: Theory and Applications Maarten Bavinck, Ratana Chuenpagdee, Svein Jentoft, Jan Kooiman, 2013-04-10 Following from Fish for Life Interactive Governance for Fisheries Kooiman et al 2005 which presents an interdisciplinary and intersectoral approach to the governance of capture and aquaculture fisheries this volume pursues what interactive governance theory and the governability perspective contribute to

the resolution of key fisheries problems these include overfishing unemployment and poverty food insecurity and social injustice Since these problems are varied and can be felt among governments resource users and communities globally the diagnosis must be holistic and take account of principles institutions and operational conditions The authors argue that wicked problems and institutional limitations are inherent to each setting and must be included in the analysis The volume thereby offers a new lens and a systematic approach for analysing the nature of problems and challenges concerning the governance of fisheries explores where these problems are situated and how potential solutions may be found It now seems clear that the crisis in the world s fisheries is a much larger and more complex problem than many had imagined Yet examining it through the lens of governability may offer the best hope for alleviating it as well as alleviating similar crises in other social systems James R McGoodwin Professor Emeritus University of Colorado

Aquaculture and the Environment Barbara Sladonja, 2011-12-22 Aquaculture is the art science and business of cultivating aquatic animals and plants in fresh or marine waters It is the extension of fishing resulted from the fact that harvests of wild sources of fish and other aquatic species cannot keep up with the increased demand of a growing human population Expansion of aquaculture can result with less care for the environment The first pre requisite to sustainable aquaculture is clean wate but bad management of aquatic species production can alter or even destroy existing wild habitat increase local pollution levels or negatively impact local species Aquatic managers are aware of this and together with scientists are looking for modern and more effective solutions to many issues regarding fish farming This book presents recent research results on the interaction between aquaculture and environment and includes several case studies all over the world with the aim of improving and performing sustainable aquaculture

Environmental Effects of Marine Finfish Aquaculture Barry Hargrave, 2005-08-24 Environmental risks associated with large scale marine finfish cage aquaculture cast doubt on the sustainability of the industry This book divides the topic into its broad parts Eutrophication Sedimentation and Benthic Impacts Changes in Trophic Structure and Function and Managing Environmental Risks and goes further to analyze methods and models currently used to measure near and far field environmental effects of finfish mariculture and and their implications for management

World Fish Farming: Cultivation and Economics E. Brown, 2012-12-06 Until the First Edition of World Fish Farming Cultivation and Econom ics was published several years ago there was little or no economic and technical information on commercial aquaculture either by countries or by species I tried at that time to partially fill the gap in the literature In this Second Edition I have updated data originally presented and increased the scope by adding new countries New trout data have been added for 10 western European countries sections on cost of production of food sized catfish and fingerlings in the USA new and improved chapters for Japan Hungary Indonesia the Philippines and the United Kingdom and com pletely new chapters pertaining to Poland Thailand and Czechoslovakia have all been added to this edition The book now includes 31 countries including all major producing ones Between 5 5 and 6

0 million metric tons of finfish shrimp and crayfish cultured production are represented which accounts for about 90% of the world's total. The People's Republic of China and the USSR as well as countries on the continents of Europe, Asia, North America and Oceania are represented. Because of only minimal reported cultured fish production in Africa and South America, these continents have been omitted. Also, according to information received from New Zealand, there is no culturing of fish in that country other than for restocking of public waters. More than 100 species of cultured fish, seven species of shrimp and prawns and six species of crayfish are discussed.

Final Report of the Subcommittee to Study Salmon Aquaculture in Maine Maine. Legislature. Joint Standing Committee on Marine Resources. Subcommittee to Study Salmon Aquaculture in Maine, 1990. *Aquaculture Environment Regulation and System Engineering* Ce Shi, Zhangying Ye, Dibo Liu, 2023-11-02

The Fight Over Food Wynne Wright, Gerad Middendorf, 2010-11. One problem with the food system is that price is the bottom line rather than having the bottom line be land stewardship, an appreciation for the environmental and social value of small scale family farms or for organically grown produce. Interview with farmer in Skagit County, Washington. For much of the later twentieth century, food has been abundant and convenient for most residents of advanced industrial societies. The luxury of taking the safety and dependability of food for granted pushed it to the back burner in the consciousness of many. Increasingly, however, this once taken-for-granted food system is coming under question on issues such as the humane treatment of animals, genetically engineered foods, and social and environmental justice. Many consumers are no longer content with buying into the mainstream commodity-driven food market on which they once depended. Resistance has emerged in diverse forms from protests at the opening of McDonald's restaurants worldwide to ever greater interest in alternatives such as CSAs, community-supported agriculture, fair trade, and organic foods. The food system is increasingly becoming an arena of struggle that reflects larger changes in societal values and norms as expectations are moving beyond the desire for affordable, convenient foods to a need for healthy and environmentally sound alternatives. In this book, leading scholars and scholar activists provide case studies that illuminate the complexities and contradictions that surround the emergence of a new day in agriculture. The essays found in *The Fight Over Food* analyze and evaluate both the theoretical and historical contexts of the agrifood system and the ways in which trends of individual action and collective activity have led to an accumulation of resistance that greatly affects the mainstream market of food production. The overarching theme that integrates the case studies is the idea of human agency and the ways in which people purposefully and creatively generate new forms of action or resistance to facilitate social changes within the structure of predominant cultural norms. Together, these studies examine whether these combined efforts will have the strength to create significant and enduring transformations in the food system.
