McClendon, 2005-01-01 This book is the first devoted to the important innovations in architecture that took place in western Europe between the death of emperor Justinian in A D 565 and the tenth century During this period of transition from Late Antiquity to the Middle Ages the Early Christian basilica was transformed in both form and function Charles B McClendon draws on rich documentary evidence and archaeological data to show that the buildings of these three centuries studied in isolation but rarely together set substantial precedents for the future of medieval architecture He looks at buildings of the so called Dark Ages monuments that reflected a new assimilation of seemingly antithetical barbarian and classical attitudes toward architecture and its decoration and at the grand and innovative architecture of the Carolingian Empire The great Romanesque and Gothic churches of subsequent centuries owe far more to the architectural achievements of the Early Middle Ages than has generally been recognized the author argues **Synopsis: An Annual Index of Greek Studies, 1993, 3** Andrew D. **Anglo-Saxon Towers of Lordship** Michael G. Shapland, 2019-01-10 It has long been assumed that England lay outside the Western European tradition of castle building until after the Norman Conquest of 1066 It is now becoming apparent that Anglo Saxon lords had been constructing free standing towers at their residences all across England over the course of the tenth and eleventh centuries Initially these towers were exclusively of timber and quite modest in their scale although only a handful are known from archaeological excavation There followed the so called tower nave churches towers with only a tiny chapel located

inside which appear to have had a dual function as buildings of elite worship and symbols of secular power and authority For the first time this book gathers together the evidence for these remarkable buildings many of which still stand incorporated into the fabric of Norman and later parish churches and castles It traces their origin in monasteries where kings and bishops drew upon Continental European practice to construct centrally planned tower like chapels for private worship and burial and to mark gates and important entrances particularly within the context of the tenth century Monastic Reform Adopted by the secular aristocracy to adorn their own manorial sites it argues that many of the known examples would have provided strategic advantage as watchtowers over roads rivers and beacon systems and have acted as focal points for the mustering of troops The tower nave form persisted into early Norman England where it may have influenced a variety of high status building types such as episcopal chapels and monastic belltowers and even the keeps and gatehouses of the earliest stone castles The aim of this book is to finally establish the tower nave as an important Anglo Saxon building type and to explore the social architectural and landscape contexts in which they operated
