a matter of time before we discover the right station

Waiting for Contact tells the story of the Search for Extraterrestrial Intelligence SETI movement which emerged in 1959 as astronomers began using radio telescopes to listen for messages from space New technological developments turned what once was speculation into science Boosted by support from Frank Drake Philip Morrison Carl Sagan and the genre of science fiction the SETI movement gained followers and continues to capture imaginations today In this one of a kind history Lawrence Squeri looks at the people reasons goals and mindsets behind SETI He shows how it started as an expression of the times a way out of Cold War angst with hope for a better world SETI s early advocates thought that with guidance from technically and ethically advanced outsiders humanity might learn how to avoid horrors like nuclear annihilation and societal collapse from overpopulation Some hoped that good news from outer space might reveal a cure for cancer or even the secret of immortality Squeri also describes the challenges SETI has faced over the years the struggle to be taken seriously by the scientific community and by NASA competition for access to radio telescopes perpetual lack of funding and opposition from influential politicians He covers the rise and fall of Soviet SETI and the few rare meetings between Soviet and American astronomers Despite many setbacks the movement pressed forward with the aid of private donations and developed outreach programs Volunteers can now help search for new civilizations on their personal computers by joining the SETI Home project Today SETI researchers continue to see themselves as explorers They often identify with Columbus and just as Columbus never realized the full implications of his discovery we cannot predict what will happen if contact is made This book points out that if against all expectations the embattled SETI movement finally succeeds the long awaited first signal picked up by its radio antennas will usher the greatest shift in human history A new adventure will begin Lawrence Squeri is professor emeritus of history at East Stroudsburg University **The Book of Mars** Samuel Glasstone,1968 For the general reader Nothing Is Too Wonderful to Be True Philip Morrison,1997-05-08 Here is a provocative collection of essays by Philip Morrison widely known for his work on the Manhattan project and later for his involvement in quantum and nuclear physics and high energy astrophysics Morrison offers a stimulating look at diverse subjects ranging from cosmology particularly interstellar communication to nuclear disarmament to creative ways of teaching science He also offers his own perspective on his inspiring friendships with Niels Bohr Richard Feynman Bernard Peters and other physics giants **Significant Achievements in Space Science 1967** United States. National Aeronautics and Space Administration. Scientific and Technical Information Division,1968 **Methods of Detection and Identification of Bacteria (1977)** B. M. Mitruka,2017-11-22 The objective of this book is to present a critical review and evaluation of the so called conventional methods currently being used for bacterial identification as well as to discuss the new approaches for the detection and identification of bacteria Morphological biochemical and serological methods of detection and identification of bacteria in clinical specimens are emphasised and current methods of characterization and enumeration of bacteria in air water milk and other food materials are also described **Technical Report - Jet**
