A Scientific Search for Altruism C. Daniel Batson, 2018-10-19 For centuries the egoism altruism debate has echoed through Western thought Egoism says that the motivation for everything we do including our seemingly selfless acts of care for others is to gain one or another self benefit Altruism while not denying the force of self interest says that under certain circumstances we can care for others for their sakes not our own Over the past half century social psychologists have turned to laboratory experiments on humans to provide a scientific resolution of this debate about our nature The experiments have focused on the possibility that empathic concern other oriented emotion elicited by and congruent with the perceived welfare of someone in need produces altruistic motivation to remove that need With carefully constructed experimental designs these scientists have tested the nature of the motivation produced by empathic concern determining whether it is egoistic or altruistic and thereby providing an answer to a fundamental question about what makes us tick Framed as a detective story this book traces the scientific search for altruism through numerous studies and attempts to examine various motivational suspects reaching the improbable conclusion that empathy induced altruism is indeed part of our nature The book then considers the implications of this conclusion both for our understanding of who we are as humans the bad news as well as the good and for how we might create a more humane society Chambers's Journal of Popular Literature, Science and Arts ,1889 *Chamber's Journal of Popular Literature, Science and Arts* ,1889 **Scientific**
