Features chapters on the effects of climate change on pelagic species, cod, lobsters, plankton, macroalgae, seagrasses, and coral reefs. Reviews the spread of diseases, economic and social impacts, marine aquaculture, and adaptation in aquaculture under climate change. Includes special reports on the Antarctic Ocean, the Caribbean Sea, the Arctic Ocean, and the Mediterranean Sea. Extensive references throughout the book make this volume both a comprehensive text for general study and a reference guide to further research for fisheries scientists, fisheries managers, aquaculture personnel, climate change specialists, aquatic invertebrate and vertebrate biologists, physiologists, marine biologists, economists, environmentalist biologists, and planners. Microalgal Biotechnology Ajam Shekh, Peer Schenk, R Sarada, 2021-05-10

Microalgae are a group of single-celled photosynthetic microorganisms. They are of great commercial interest as they are capable of producing biomass with a vast array of biochemicals using sunlight, CO<sub>2</sub>, and various other naturally occurring nutrients. Correctly utilised, they have the potential to provide a sustainable supply of commercially relevant biochemicals, biofuels, nutraceuticals, food, and feed supplements. The field of microalgal biotechnology is a fast-paced area of research with technologies coming ever closer to commercial viability. *Microalgal Biotechnology* consolidates the latest research in the field together with a look at market potential and policy considerations. Highlighting the huge potential of microalgae as commercial commodities, it covers progress on various fronts including bio-refinery and its technological challenges, genetic engineering, biosafety, and regulatory issues, open and closed photo-bioreactors for biomass production, market space, and sustainability for algal products. This book is a useful resource for researchers, academicians, postgraduate students, industries, policy makers, and anyone interested in the status and future possibilities of microalgae commercialisation. **Monitoring**

**Artificial Materials and Microbes in Marine Ecosystems: Interactions and Assessment Methods** Toshiyuki Takahashi, 2020-02-10. Marine ecosystems offer several benefits to human communities. To make sustainable use of these benefits, it is necessary to elucidate and conserve marine ecology and strive to maintain a sustainable natural resource management program. For this reason, understanding the diversity and behavior of both macro ecosystems and micro ecosystems are crucial. *Monitoring Artificial Materials and Microbes in Marine Ecosystems* explores microbial roles and their interaction with artificial materials in marine environments. After starting with simple topics for beginners, chapters explore methods to detect microorganisms in marine ecosystems and interactions of marine organisms with artificial materials. The

sequential progression into advanced topics makes it easier to understand how to solve the reduction in marine ecosystem viability caused by adverse events Readers are provided with useful information for rehabilitating marine environments to make them sustainable for communities Topics are covered in 3 parts Part 1 is an introductory guide to marine ecosystems and environmental monitoring assessment Readers are introduced to coral reef ecosystems algal blooms and the role of environmental monitoring services in maintaining and restoring the quality of marine environments This is followed by examples of sustainable marine environment assessment Part 2 provides information about methods to detect microorganisms viruses and bacteria and evaluate marine environments This includes sample enrichment methods electrochemical analysis and single cell imaging techniques The highly sensitive and specific techniques presented in the book are applicable in a wide variety of situations Part 3 is dedicated to interactions between artificial metallic materials and microorganisms in marine environments Chapters in this section share results from several experiments conducted to separate microorganisms and biofilms from such environments This book is intended primarily for marine ecologists microbiologists environmental engineers and engineers associated with industrial projects This book is also useful as a text for undergraduate and graduate level courses in marine biology ecology and microbiology

**Tropical Phyconomy Coalition Development** Alan T. Critchley, Anicia Q. Hurtado, Iain Charles Neish, 2024-03-20 Tropical seaweeds represent a major source of diversity and potential for cultivation Cultivation of seaweeds has been coined phyconomy derived from phycology and agronomy One of the world's most important groups of tropical seaweeds is the eucheumatoids comprising members of the genera *Kappaphycus* and *Eucheuma* Whilst the biomass from these seaweeds is mostly used to produce colloids i.e. various carrageenans trends are changing and new value added applications are emerging including bioactives for agriculture pharmaceutical applications as well as bioplastics and possibly energy when processed as part of a MUZE i.e. multi stream zero effluent or biorefinery approach Phyconomic activities around the production of seaweed biomass provides socio economic benefits for many hundreds of thousands of global coastal dwellers around a circum tropical belt However times are changing and the once repetitive manual aspects of attaching seaweed fragments to ropes and nets is beginning to be mechanized Whilst it has taken agronomy several thousands of years to develop on land its phyconomic counterpart is at best 50 years old in relation to developments in cultivation of eucheumatoids Activities around cultivation of these tropical seaweeds can contribute to achieving the UN Sustainable Development Goals This book contains contributions from many of the world's authorities on tropical seaweed farming with a focus on the eucheumatoids There are many lessons learned and best practice examples which will be of interest to students of phyconomy phycology marine science industrial users of cultivated biomass as well as practitioners in charge of coastal zone management and ensuring responsible and sustainable socio economic benefits are derived from marine resources for coastal dwellers
