Fate of Pesticides in the Atmosphere: Implications for Environmental Risk Assessment Harrie F.G. van Dijk,W.

Addo J. van Pul, Pim de Voogt, 2013-04-17 Global pesticide use is currently estimated at approximately 2.5 billion kg per year. Pimentel et al. 1998. To be effective, pesticides need to persist for a certain period of time. However, the longer their persistence, the greater the potential for transport of a fraction of the amount applied away from the target area. Pesticides are dispersed in the environment by water currents, wind, or biota. Pesticides can directly contaminate ground and surface waters by leaching, surface run-off, and drift. Pesticides can also enter the atmosphere during application by evaporation and drift of small spray droplets that remain airborne. Following application, pesticides may volatilise from the crop or the soil. Finally, wind erosion can cause soil particles and dust loaded with pesticides to enter the atmosphere. The extent to which pesticides enter the air compartment is dependent upon many factors: the properties of the substance in question (e.g. vapour pressure), the amount used, the method of application, the formulation, the weather conditions (such as wind speed, temperature, humidity), the nature of the crop, and soil characteristics. Measurements at application sites reveal that sometimes more than half of the amount applied is lost into the atmosphere within a few days. Spencer and Clithero 1990, Taylor and Spencer 1990, Van den Berg et al. this issue.

Aerosol Chemical Processes in the Environment Kvetoslav R. Spurny, 2000-03-23. A compilation of the most important aerosol chemical processes involved in known scientific and technological disciplines. *Aerosol Chemical Processes in the Environment* serves as a handbook for aerosol chemistry. Aerosol science is interdisciplinary, interfacing with many environmental, biological, and technological research fields. Aerosols and aerosol research play an important role in both basic and applied scientific and technological fields. Interdisciplinary cooperation is useful and necessary. *Aerosol Chemical Processes in the Environment* uses several examples to show the impact of aerosol chemistry in several different fields, mainly in basic and atmospheric research. The book describes the most important chemical processes involved in the various scientific and technological disciplines.

Addresses modeling volatilization flux, residues on soil surface, soil incorporated residues, pesticide residues on plants, and water downwind concentrations based on estimated flux, treated foliage, and treated water. Uncertainty in estimated flux, outliers, effect of wind speed and temperature on evaporative flux, soil and plants surfaces, and other flux estimation methods. Eureka Labs and Knudsen Effusion.
