Gibbons, 2006-05-12 Longitudinal data analysis for biomedical and behavioral sciences This innovative book sets forth and describes methods for the analysis of longitudinal data emphasizing applications to problems in the biomedical and behavioral sciences Reflecting the growing importance and use of longitudinal data across many areas of research the text is designed to help users of statistics better analyze and understand this type of data Much of

the material from the book grew out of a course taught by Dr Hedeker on longitudinal data analysis The material is therefore thoroughly classroom tested and includes a number of features designed to help readers better understand and apply the material Statistical procedures featured within the text include Repeated measures analysis of variance Multivariate analysis of variance for repeated measures Random effects regression models RRM Covariance pattern models Generalized estimating equations GEE models Generalizations of RRM and GEE for categorical outcomes Practical in their approach the authors emphasize the applications of the methods using real world examples for illustration Some syntax examples are provided although the authors do not generally focus on software in this book Several datasets and computer syntax examples are posted on this title s companion Web site The authors intend to keep the syntax examples current as new versions of the software programs emerge This text is designed for both undergraduate and graduate courses in longitudinal data analysis Instructors can take advantage of overheads and additional course materials available online for adopters

Applied statisticians in biomedicine and the social sciences can also use the book as a convenient reference **Modeling Longitudinal Data** Robert E. Weiss,2005-06-28 The book features many figures and tables illustrating longitudinal data and numerous homework problems The associated web site contains many longitudinal data sets examples of computer code and labs to re enforce the material Weiss emphasizes continuous data rather than discrete data graphical and covariance methods and generalizations of regression rather than generalizations of analysis of variance

Th. van der Kamp, Professor Leo J Th Van Der Kamp, Ab Mooijaart, Dr Willem A Van Der Van Der Kloot, Dr Rien Van Der Leeden, Eeke Van Der Burg, 1998-10-26 By looking at the processes of change over time by carrying out longitudinal studies researchers answer questions about learning development educational growth social change and medical outcomes However longitudinal research has many faces This book examines all the main approaches as well as newer developments such as structural equation modelling multilevel modelling and optimal scaling to enable the reader to gain a thorough understanding of the approach and make appropriate decisions about which technique can be applied to the research problem Conceptual explanations are used to keep technical terms to a minimum examples are provided for each approach issues of design measurement and significance are considered and a standard notation is used throughout

**What is Quantitative Longitudinal Data Analysis?** Vernon Gayle, Paul Lambert, 2020 Practical Longitudinal Data Analysis David J. Hand, Martin J. Crowder, 2017-10-06 This text describes regression based approaches to analyzing longitudinal and repeated measures data It emphasizes statistical models discusses the relationships between different approaches and uses real data to illustrate practical applications It uses commercially available software when it exists and illustrates the program code and output The data appendix provides many real data sets beyond those used for the examples which can serve as the basis for exercises **What is Quantitative Longitudinal Data Analysis?** Vernon Gayle, Paul Lambert (Lecturer), 2017 Across the social sciences there is widespread agreement that quantitative longitudinal research designs offer analysts powerful scientific data resources But to date most texts on social survey analysis have been written from a statistical rather than a social science data analysis perspective and they lack adequate coverage of common practical challenges This book aims to provide a practical and up to date introduction to influential approaches to quantitative longitudinal data analysis in the social sciences The book will discuss definitions and terms explain the relative attractions of such a design and enumerate in an accessible way the main techniques of analysis explaining their requirements statistical properties and their substantive contribution The book is designed for postgraduates and researchers across the social sciences considering the use of quantitative longitudinal data resources in their research It will also be an excellent text for undergraduate and postgraduate courses on advanced quantitative methods Bloomsbury Publishing **Longitudinal Data Analysis for the Behavioral Sciences Using R** Jeffrey D. Long, 2012 This book is a practical guide for the analysis of longitudinal behavioural data Longitudinal data consist of repeated measures collected on the same subjects over time

**Longitudinal Categorical Data Analysis** Brajendra C. Sutradhar, 2014-10-30 This is the first book in longitudinal categorical data analysis with parametric correlation models developed based on dynamic relationships among repeated

categorical responses This book is a natural generalization of the longitudinal binary data analysis to the multinomial data setup with more than two categories Thus unlike the existing books on cross sectional categorical data analysis using log linear models this book uses multinomial probability models both in cross sectional and longitudinal setups A theoretical foundation is provided for the analysis of univariate multinomial responses by developing models systematically for the cases with no covariates as well as categorical covariates both in cross sectional and longitudinal setups In the longitudinal setup both stationary and non stationary covariates are considered These models have also been extended to the bivariate multinomial setup along with suitable covariates For the inferences the book uses the generalized quasi likelihood as well as the exact likelihood approaches The book is technically rigorous and it also presents illustrations of the statistical analysis of various real life data involving univariate multinomial responses both in cross sectional and longitudinal setups This book is written mainly for the graduate students and researchers in statistics and social sciences among other applied statistics research areas However the rest of the book specifically the chapters from 1 to 3 may also be used for a senior undergraduate course in statistics

Longitudinal Data Analysis Ikuko Funatogawa, Takashi Funatogawa, 2019-02-04 This book provides a new analytical approach for dynamic data repeatedly measured from multiple subjects over time Random effects account for differences across subjects Auto regression in response itself is often used in time series analysis In longitudinal data analysis a static mixed effects model is changed into a dynamic one by the introduction of the auto regression term Response levels in this model gradually move toward an asymptote or equilibrium which depends on covariates and random effects The book provides relationships of the autoregressive linear mixed effects models with linear mixed effects models marginal models transition models nonlinear mixed effects models growth curves differential equations and state space representation State space representation with a modified Kalman filter provides log likelihoods for maximum likelihood estimation and this representation is suitable for unequally spaced longitudinal data The extension to multivariate longitudinal data analysis is also provided Topics in medical fields such as response dependent dose modifications response dependent dropouts and randomized controlled trials are discussed The text is written in plain terms understandable for researchers in other disciplines such as econometrics sociology and ecology for the progress of interdisciplinary research
