South Shore Larry McCormick, 1984 The south shore of Long Island one of New York's greatest recreational assets is receding at the rate of up to six feet per year In many cases efforts to halt this erosion actually have increased it Buildings once thought safely constructed back from high tidemarks today protrude far into the water Even more the number of homes and facilities built too close to the sea's edge has dramatically increased making the south shore probably less ready to withstand a major storm than at the time of the cataclysmic hurricane of 1938 Thus the question of what to do now to overcome and avoid these hazards takes on real urgency Pointing to past mistakes many Long Islanders insist that only by acting in an informed reasonable way can safe and environmentally sound development be possible for everyone

New Key Geography for GCSE David Waugh, Tony Bushell, 2002. Now available as a single textbook. Key Geography for GCSE has been completely revised and updated to meet all the requirements of the 2002 GCSE Geography specifications. The core content from the previous editions has been combined in one textbook. Suitable for all the GCSE specifications from each awarding body, this edition builds on the popular approach of the revised Key Stage 3 Key Geography series. The revised Teacher Resource Guide has been completely rewritten, providing generic resources to support the core textbook. An accompanying CD-ROM contains all the teacher resources in a downloadable format and editable schemes of work linking the text to each of the GCSE specifications and Standard Grade. *Coastal Engineering* Dominic Reeve, Andrew Chadwick, Christopher Fleming, 2004-09-16.

The United Nations estimate that by 2004 in excess of 75% of the world's population will live within the coastal zone. These regions are therefore of critical importance to a majority of the world's citizens. The coastal zone provides important economic, transport, residential and recreational functions, all of which depend upon its physical characteristics: appealing landscape, cultural heritage, natural resources and rich marine and terrestrial biodiversity. This resource is thus the foundation for the well-being and economic viability of present and future generations of coastal zone residents. The pressure on coastal environments is also being exacerbated by rapid changes in global climate. The value of the coastal zone to humanity and the enormous pressure on it provide strong incentives for a greater scientific understanding which can ensure effective coastal engineering practice and efficient and sustainable management. *Coastal Engineering Processes: Theory and Design Practice* is the only book providing a thorough introduction to all aspects of coastal processes, morphology and design of coastal defences. The use of detailed and state-of-the-art modelling techniques are an important theme of this book, and there are numerous case studies showing actual examples where mathematical modelling has been applied through engineering judgement. With thorough coverage of the theory and practical demonstration of the applications, *Coastal Engineering Processes: Theory and Design Practice* is a must-have for all students and engineers working in coastal management and engineering. *Natural Hazards* Edward A. Keller, Duane E. DeVecchio, 2019-03-29. The new revised fifth edition of *Natural Hazards* remains the go-to introductory level survey intended for university and college courses that are concerned with earth processes that have direct and often sudden and violent impacts on human society. The text integrates principles of geology, hydrology, meteorology, climatology, oceanography, soil science, ecology and solar system astronomy. The textbook explains the earth processes that drive hazardous events in an understandable way, illustrates how

these processes interact with our civilization and describes how we can better adjust to their effects Written by leading scholars in the area the new edition of this book takes advantage of the greatly expanding amount of information regarding natural hazards disasters and catastrophes The text is designed for learning with chapters broken into small consumable chunks of content for students Each chapter opens with a list of learning objectives and ends with revision as well as high level critical thinking questions A Concepts in Review feature provides an innovative end of chapter section that breaks down the chapter content by parts reviewing the learning objectives summary points important visuals and key terms New case studies of hazardous events have been integrated into the text and students are invited to actively apply their understanding of the five fundamental concepts that serve as a conceptual framework for the text Figures illustrations and photos have been updated throughout The book is designed for a course in natural hazards for nonscience majors and a primary goal of the text is to assist instructors in guiding students who may have little background in science to understand physical earth processes as natural hazards and their consequences to society
