Markov Chain Monte Carlo in Practice W.R. Gilks,S. Richardson,David Spiegelhalter,1995-12-01 In a family study of breast cancer epidemiologists in Southern California increase the power for detecting a gene environment interaction In Gambia a study helps a vaccination program reduce the incidence of Hepatitis B carriage Archaeologists in Austria place a Bronze Age site in its true temporal location on the calendar scale And in France researchers map a rare disease with relatively little variation Each of these studies applied Markov chain Monte Carlo methods to produce more accurate and inclusive results General state space Markov chain theory has seen several developments that have made it both more accessible and more powerful to the general statistician Markov Chain Monte Carlo in Practice introduces MCMC methods and their applications providing some theoretical background as well The authors are researchers who have made key contributions in the recent development of MCMC methodology and its application Considering the broad audience the editors emphasize practice rather than theory keeping the technical content to a minimum The examples range from the simplest application Gibbs sampling to more complex applications The first chapter contains enough information to allow the reader to start applying MCMC in a basic way The following chapters cover main issues important concepts and results techniques for implementing MCMC improving its performance assessing model adequacy choosing between models and applications and their domains Markov Chain Monte Carlo in Practice is a thorough clear introduction to the methodology and applications of this simple idea with enormous potential It shows the importance of MCMC in real applications such as archaeology astronomy biostatistics genetics epidemiology and image analysis and provides an excellent base for MCMC to be applied to other fields as well Markov Chain Monte Carlo in Practice W.R. Learning in Graphical Models M.I. Jordan, 2012-12-06 In the past decade a number of different research communities within the computational sciences have studied learning in networks starting from a number of different points of view There has been substantial progress in these different communities and surprising convergence has developed between the formalisms The awareness of this convergence and the growing interest of researchers in understanding the essential unity

of the subject underlies the current volume Two research communities which have used graphical or network formalisms to particular advantage are the belief network community and the neural network community Belief networks arose within computer science and statistics and were developed with an emphasis on prior knowledge and exact probabilistic calculations Neural networks arose within electrical engineering physics and neuroscience and have emphasised pattern recognition and systems modelling problems This volume draws together researchers from these two communities and presents both kinds of networks as instances of a general unified graphical formalism The book focuses on probabilistic methods for learning and inference in graphical models algorithm analysis and design theory and applications Exact methods sampling methods and variational methods are discussed in detail Audience A wide cross section of computationally oriented researchers including computer scientists statisticians electrical engineers physicists and neuroscientists

Geometrically Constructed Markov Chain Monte Carlo Study of Quantum Spin-phonon Complex Systems Hidemaro

Suwa, 2013-11-05 In this thesis novel Monte Carlo methods for precisely calculating the critical phenomena of the effectively frustrated quantum spin system are developed and applied to the critical phenomena of the spin Peierls systems Three significant methods are introduced for the first time a new optimization algorithm of the Markov chain transition kernel based on the geometric weight allocation approach the extension of the worm directed loop algorithm to nonconserved particles and the combination with the level spectroscopy Utilizing these methods the phase diagram of the one dimensional XXZ spin Peierls system is elucidated Furthermore the multi chain and two dimensional spin Peierls systems with interchain lattice interaction are investigated The unbiased simulation shows that the interesting quantum phase transition between the 1D like liquid phase and the macroscopically degenerated dimer phase occurs on the fully frustrated parameter line that separates the doubly degenerated dimer phases in the two dimensional phase diagram The spin phonon interaction in the spin Peierls system introduces the spin frustration which usually hinders the quantum Monte Carlo analysis owing to the notorious negative sign problem In this thesis the author has succeeded in precisely calculating the critical phenomena of the effectively frustrated quantum spin system by means of the quantum Monte Carlo method without the negative sign
