Radiation Science For Physicians And Public Health Workers:

Radiation Science for Physicians and Public Health Workers Marco Zaider,Harald H. Rossi,2012-12-06 We have considered it to be a demanding assignment to provide a complete exposition dealing with the nature of radiation its effects and protection against it to workers in health related activities Radiation and more precisely ionizing radiation is emitted by X ray machines nuclear reactors and nuclear weapons but also comes from natural sources to which we are all exposed It would have been easier to deal with this subject area with the terminology and mathematics employed by specialists However although most of the potential readers probably have obtained further pertinent knowledge we assume no more than a high school education in science and mathematics and the challenge was to provide maximum information within this constraint This book contains five sections A Radiation Physics B Radiological Physics C Radiation Biology D Radiation Effects on Human Populations and E Radiation Protection Each section is preceded by a synopsis covering its essential features It provides sufficient information to enable readers to obtain a general understanding of the subject of the section and an adequate background for comprehension of other sections The more detailed presentation in the bulk of each section is followed by appendixes that generally contain more advanced topics This scheme necessarily involves some repetition but permits a more flexible approach for readers who are especially interested in the contents of particular sections **Utility**

Correction Paul W. Gooch, 2019-03-01 Course Correction engages in deliberation about what the twenty first century university needs to do in order to re find its focus as a protected place for unfettered commitment to knowledge not just as a space for creating employment or economic prosperity The university s business Paul W Gooch writes is to generate and critique knowledge claims and to transmit and certify the acquisition of knowledge In order to achieve this a university must have a reputation for integrity and trustworthiness and this in turn requires a diligent and respectful level of autonomy from state religion and other powerful influences It also requires embracing the challenges of academic freedom and the effective governance of an academic community Course Correction raises three important questions about the twenty first century university In discussing the dominant attention to student experience the book asks Is it now all about students Secondly in questioning What knowledge should undergraduates gain it provides a critique of undergraduate experience advocating a Socratic approach to education as interrogative conversation Finally by asking What and where are well placed universities the book makes the case against placeless education offered in the digital world in favour of education that takes account of
