

Medium- and low-level radioactive waste management

Most radioactive waste generated in Spain is low and medium level. It is produced in hospitals, research centers, industries and nuclear power plants. This waste is placed in definitive storage in El Cabril (Cordoba), a world reference.

This storage facility also handles very low level waste that, due to its low radioactivity, faces less requirements and is stored in other specific structures.

Radioactive Waste Disposal Low High Level:

Improving the Regulation and Management of Low-Activity Radioactive Wastes National Research Council, Division on Earth and Life Studies, Board on Radioactive Waste Management, Committee on Improving Practices for Regulating and Managing Low-Activity Radioactive Wastes, 2003-10-14 Low activity radioactive wastes include a broad spectrum of materials for which a regulatory patchwork has evolved over almost 60 years These wastes present less of a radiation hazard than either spent nuclear fuel or high level radioactive waste Low activity wastes however may produce potential radiation exposure at well above background levels and if not properly controlled may represent a significant chronic and in some cases an acute hazard For some low activity wastes the present system of controls may be overly restrictive but it may result in the neglect of others that pose an equal or higher risk The purpose of this interim report is to provide an overview of current low activity waste regulations and management practices Improving the Regulation and Management of Low Activity Radioactive Wastes Interim Report on Current Regulations Inventories and Practices identifies gaps and inconsistencies that suggest areas for improvements The final report will assess options for improving the current practices and provide recommendations Radioactive Waste Disposal William R. Shillenn, 1984 **Understanding Radioactive Waste** Raymond L. Murray, 1994 This objective report originally prepared for the U S Department of Energy tells the glowing happy story of nuclear waste disposal in America The fourth edition has been updated to include the latest legislative and technical changes It begins by explaining what radioactivity is and goes on to explore the merits of various methods of disposal and the use of licensing and regulation as forms of protection Filled with graphs tables diagrams and black and white photos Annotation copyright by Book News Inc Portland OR *Radioactive Waste Processing and Disposal* U.S. Nuclear Regulatory Commission, 1980 *Civilian Nuclear Waste Disposal* Mark Holt, 2012-10-07 Nuclear Waste Disposal Warren S. Melfort, 2003 The disposal of nuclear waste is becoming a major concern Many nuclear power plants around the world are nearing the end of their operating lives This is particularly true in the United States where most nuclear power plants are approaching the end of the operational time period allowed in their licenses The disposal of radioactive waste from nuclear power plants and nuclear missiles is as politically intense an issue as the plants and missiles themselves Yet the three issues have remained curiously separate in spite of their close physical ties Few debates on nuclear power or nuclear weapons discuss the problems of waste disposal should the power plant or missile be decommissioned Few debates on nuclear waste disposal discuss the opportunities to close nuclear power plants or get rid of nuclear weapons a disposal site would afford Nuclear waste can be generally classified as either low level radioactive waste or high level radioactive waste Low level nuclear waste usually includes material used to handle the highly radioactive parts of nuclear reactors i e cooling water pipes

and radiation suits and waste from medical procedures involving radioactive treatments or x rays Low level waste is comparatively easy to dispose of The level of radioactivity and the half life of the radioactive isotopes in low level waste is relatively small Storing the waste for a period of 10 to 50 years will allow most of the radioactive isotopes in low level waste to decay at which point the waste can be disposed of as normal refuse High level radioactive waste is generally material from the core of the nuclear reactor or nuclear weapon This waste includes uranium plutonium and other highly radioactive elements made during fission Most of the radioactive isotopes in high level waste emit large amounts of radiation and have extremely long half lives some longer than 100 000 years creating long time periods before the waste will settle to safe levels of radioactivity This new book explores the issues pertaining either directly or indirectly to nuclear waste disposal *Low and Intermediate Level Radioactive Waste Management: High level radioactive waste and spent fuel management* Denis Alexandre,1993 *Risk and Decisions About Disposition of Transuranic and High-Level Radioactive Waste* National Research Council,Division on Earth and Life Studies,Board on Radioactive Waste Management,Committee on Risk-Based Approaches for Disposition of Transuranic and High-Level Radioactive Waste,2005-02-07 The U S Department of Energy DOE manages dozens of sites across the nation that focus on research design and production of nuclear weapons and nuclear reactors for defense applications Radioactive wastes at these sites pose a national challenge and DOE is considering how to most effectively clean them up Some of the greatest projected risks cleanup costs and technical challenges come from processing and disposing transuranic and high level radioactive waste This report addresses how DOE should incorporate risk into decisions about whether the nation should use alternatives to deep geologic disposal for some of these wastes It recommends using an exemption process involving risk assessment for determining how to dispose of problematic wastes The report outlines criteria for risk assessment and key elements of a risk informed approach The report also describes the types of wastes that are candidates for alternative disposition paths potential alternatives to deep geologic disposal for disposition of low hazard waste and whether these alternatives are compatible with current regulations *Radioactive Waste Management* ,1981 **The Impact of Low-Level Radioactive Waste Management Policy on Biomedical Research in the United States** National Research Council,Commission on Life Sciences,Board on Radiation Effects Research,Committee on the Impact of Low-Level Radioactive Waste Management Policy on Biomedical Research in the United States,2001-03-09 The National Research Council s Committee on the Impact of Low Level Radioactive Waste Management Policy on Biomedical Research in the United States was called on to assess the effects of the low level radioactive waste management policy on the current and future activities of biomedical research This report provides an assessment of the effects of the current management policy for low level radioactive waste LLRW and resulting consequences such as higher LLRW disposal costs and onsite storage of LLRW on the current and future activities of biomedical research That assessment will include evaluating the effects that the lack of facilities and disposal capacity and rules of disposal
