The skills required by children s nurses are many and varied and are undertaken in a variety of settings Sick children are cared for at home in children s units and hospitals and sometimes in adult wards In addition children with disabilities may need nursing care while at special schools or in residential settings This book provides a clinical manual of common practices Each practice is research based and presented in a common format which covers Objectives Rationale Factors to note Guidelines Positioning Equipment Method Special observations and possible complications References and further reading The guidelines have been written specifically for children s nursing by contributors from well known children s units They are not simply adaptations from adult practices and therefore recognise the unique differences between adult and children s nursing The introductory section covers common concepts and infection control There is also a chapter on complementary therapies and an appendix on the use of play as a distraction All hospital and community nurses dealing with children whether at home in specialised units or in community settings will find the book of great practical help The common format of each practice makes the book easy to use and refer to in a clinical setting Each practice is based on the latest research to ensure it is evidence based and up to date Introductory chapters cover issues common to all practices to make the book easier to use The appendix on play reinforces its common usage as a distraction technique A chapter on complementary therapies explains these as they are becoming more widespread All practices have been reviewed by regional centres to avoid parochialism Content reorganised to reflect the Essential Skills Clusters from the NMC New chapter on communicating with children All chapters updated to reflect the current evidence base **National Medical Audiovisual Center Catalog** National Medical Audiovisual Center,1977 Films for the health sciences Imaging Practice and Radiation Protection in Pediatric Radiology Michael Seidenbusch,Veronika Rösenberger,Karl Schneider,2019-12-05 This book offers the reader sound advice on how to perform optimal conventional pediatric radiographs and how to obtain quick and easy organ dose estimates in order to improve the optimization process in pediatric imaging Clear guidelines are provided for minimization of the radiation exposure of children through optimization of the radiation exposure conditions and conversion coefficients are

presented for calculation of the organ doses achieved in organs and tissues during conventional pediatric radiography taking into consideration both optimal and suboptimal radiation field settings Previously published conversion coefficients have failed to represent the variation in radiation field settings in daily clinical routine which has made it difficult for the pediatric radiologist to estimate the impact of the field settings on absorbed doses in organs and tissues The aim of this book co written by a pediatric radiologist a physician and physicist and a medical radiation technologist is to address this issue by providing for the first time a thorough overview of clinical radiation field settings and their implications for radiation protection An accompanying volume is devoted to fluoroscopy
