Boggs, 1976 **Radiological Safety Aspects of the Operation of Proton Accelerators** Ralph H. Thomas, Graham R. Stevenson, International Atomic Energy Agency, 1988 This report serves as a guide for the planning and implementation of radiation protection programmes for all types of positive ion accelerators The basic types of accelerators are briefly described followed by a detailed description of several installations covering the energy range from 10 MeV to 500 GeV Special emphasis is given to the production of ionizing radiation and its transmission through shielding computer techniques for shield design radiation measurement and interpretation and the radiological impact of accelerators on the environment Extensive references are given so the book can serve as a source to the published literature *Radiation Protection for Particle Accelerator Facilities* National Council on Radiation Protection and Measurements, 2003 **Safety of Radiation Generators and Sealed Radioactive Sources** International Atomic Energy Agency, 2006 The objective of this Safety Guide is to assist Member States in implementing regulatory requirements for radiation sources that will ensure their safety To that end this publication provides guidance on infrastructure responsibilities for safety on methodologies for performing safety assessments and on specific design and operational measures that should be taken to ensure safety throughout the life cycle of radiation generators and sealed radioactive sources The safety measures recommended are also applicable to radioactive sources in nuclear facilities or radioactive waste disposal facilities while recognizing that these facilities should in any case provide a high standard of source safety
