Management of Extended Parotid Tumors

Victor-Vlad Costan,2016-02-03 This extensively illustrated book aims to systematize the selection of treatment options in patients with parotid tumors that extend beyond the borders of the parotid tissue and therefore present particular problems for the surgeon Reconstruction of the postoperative defect is especially difficult in such cases because of the complexity and density of the anatomical structures in the lateral region of the head and neck and also the general condition of most patients who tend to be elderly and to have accompanying disorders The difficulty in the management of extended parotid tumors is increased by the need to sacrifice the facial nerve even if only partially The book provides clear criteria to assist in the choice of treatment from the simplest options involving use of local flaps to the most sophisticated ones It will assist the surgeon in ensuring that the patient achieves the best possible quality of life no matter what the patient's age or the associated comorbidities

Radiotherapy for Head and Neck Cancers Xinyuan Chen,Minglei Kang,Jun-Lin Yi,2025-04-10 Radiotherapy is a crucial treatment modality for head and neck cancers encompassing a range of malignancies in the upper aerodigestive tract Advanced approaches such as intensity modulated radiation therapy IMRT and particle therapy with the emergence of image guided radiation therapy IGRT techniques offer enhanced precision and improved outcomes Encouragingly combining radiotherapy with chemotherapy has shown promising results in locally advanced cases However the proximity of tumors to critical structures remains challenging to manage acute and late toxicities which demands innovative strategies to reduce radiation related side effects Addressing long term toxicities is an essential research focus with efforts toward adaptive radiotherapy radioprotective agents and other novel treatment techniques These endeavors aim to mitigate radiation induced fibrosis dysphagia dysphonia and secondary malignancies thereby enhancing patients quality of life Moreover advances in multimodal imaging techniques including computed tomography CT magnetic resonance imaging MRI positron emission tomography PET and onboard volumetric image systems have facilitated treatment planning target delineation and response assessment during and after radiotherapy Thus radiotherapy continues to be an integral component in head and neck cancer treatment and ongoing research efforts are directed toward overcoming challenges related to precision toxicities and long term outcomes

Malignancies of the Nasal Vestibule Francesco Bussu,2023-10-17 This book provides up to date information on nasal vestibule malignancies outlining the specific clinical history and pattern of spread It also describes the flaws in TNM staging which can be attributed to factors ranging from the anatomy to the definition of the main prognostic parameters Nasal vestibule malignancies are associated with a peculiar oncological history but there are also clear issues related to the reconstructive phase following ablative surgery due to the anatomic peculiarities Such issues deeply impact the cosmetic and functional results and hence the quality of life of surviving patients Additionally the book describes novel evidence on treatment outcomes for these malignancies in terms of both oncological and functional results It proposes a new standard based on interstitial HDR brachytherapy for the primary lesion and on surgery for regional metastases The book appeals to a wide readership ranging from otolaryngologists to radiation and clinical oncologists dermatologists plastic
