Tropical Rain Forests Richard T. Corlett, Richard B. Primack, 2011-03-03 The first edition of *Tropical Rain Forests* an Ecological and Biogeographical Comparison exploded the myth of the rain forest as a single uniform entity In reality the major tropical rain forest regions in tropical America Africa Southeast Asia Madagascar and New Guinea have as many differences as similarities as a result of their isolation from each other during the evolution of their floras and faunas This new edition reinforces this message with new examples from recent and on going research After an introduction to the environments and geological histories of the major rain forest regions subsequent chapters focus on plants primates carnivores and plant eaters birds fruit bats and

gliding animals and insects with an emphasis on the ecological and biogeographical differences between regions This is followed by a new chapter on the unique tropical rain forests of oceanic islands The final chapter which has been completely rewritten deals with the impacts of people on tropical rain forests and discusses possible conservation strategies that take into account the differences highlighted in the previous chapters This exciting and very readable book illustrated throughout with color photographs will be invaluable reading for undergraduate students in a wide range of courses as well as an authoritative reference for graduate and professional ecologists conservationists and interested amateurs Rain Forests Lynn M. Stone,1989 Examines the rain forest as an ecological niche and describes the plant and animal life supported there
