The Human Relationship to Nature Matthew R. Foster, 2016-11-02 Growing alarm over the harm done by humans to the natural world and even to the viability of our own industrial civilization compels us to ask the deeper moral question What should be the human relationship to nature Matthew R Foster starts by assessing three contrasting

patterns of moral reasoning the Progress Ethic that created the world we live in the biblically inspired Stewardship Ethic and the Connection Ethic based on scientific understanding of the interdependence of all natural entities Critical analysis reveals that none of these ethics is able to sustain the values it advocates due to two unsupportable presumptions that the norms of human morality are commensurate with the natural world and that the value of an entity is an intrinsic property Foster argues that in order for a future environmental ethic to be both logically coherent and environmentally constructive it must start from unconventional notions First because nature will never be commensurate with human moral reasoning non rational resources must be employed despite the risks involved Second value resides in the relationship of one entity to another and does not belong intrinsically to either in short value is foremost a verb rather than a noun Foster proposes a new paradigm attentive to the realm of value relations among all natural entities one which offers mediating opportunities between nature and morality In this new ethic there are no shoulds Rather moral responsibilities to the natural entities around us are elective placing us in an unfamiliar yet potentially liberating network of relationships This book will be of interest to scholars both instructors and students of environmental ethics philosophy religion and intellectual history and all who are concerned about the environmental challenges of our time **Let's Save Our Planet: Forests** Jess

Marianne Levy The i Paper **The Earth Remains Forever** Rob Jackson,2010-07-05 Writing especially for people who ve tuned out the environmental debate Rob Jackson persuasively argues that we re at a crucial turning point in environmental history where choices we make now will determine the quality of life into the unforeseeable future Laying out the scientific facts in plain language and with flashes of humor he shows how the escalation of population growth and resource consumption in the twentieth century caused problems from ozone depletion to global warming habitat destruction and

biodiversity loss At the same time however he highlights ongoing solutions to these problems and ways in which we can create a sustainable future for subsequent generations and all life on earth His urgent message is not that we've already failed but that we can succeed *Fate of the Rain Forest* ,1996 Presents the classroom student's text and teacher's guide for coordinating and implementing all aspects of an interdisciplinary unit on the rain forest **Farming Forever** ,1994
