The Sea Around Us James A. Kolb, 1996 **the sea around us** rachel l. carson, 1951 *Strata* Laura Poppick, 2025-07-15 An extraordinary book Marcia Björnerud author of *Turning to Stone* A revelatory journey through four moments in Earth's deep past and their lessons for our future The epic stories of our planet's 4.54 billion year history are written in strata ages old remnants of ancient seafloors desert dunes and riverbeds striping landscapes around the world In this brilliantly original debut work science writer Laura Poppick decodes strata to lead us on a journey through four global transformations that made our lives on Earth possible the first accumulations of oxygen in the atmosphere the deep freezes

of Snowball Earth the rise of mud on land and accompanying proliferation of plants and the dinosaurs reign on a hothouse planet Poppick introduces us to the researchers who have devoted their careers to understanding the events of deep time including the world's leading stegosaurus scientist She travels to sites as various as a Minnesotan iron mine that runs half a mile deep and a corner of the Australian Outback where glacial deposits date from the coldest times on Earth Ultimately she demonstrates that the planet's oceans continents atmosphere life and ice have always conspired to bring stability to Earth even if we are only just beginning to understand how these different facets interact A work in the tradition of John McPhee Strata allows us to observe how the planet has responded to past periods of environmental upheaval and shows how Earth's ancient narratives could hold lessons for our present and future *Applying Benford's Law for Assessing the Validity of Social Science Data* Michael A. Long, Paul B. Stretesky, Kenneth J. Berry, Janis E. Johnston, Michael J. Lynch, 2023-11-23 Benford's Law is a probability distribution for the likelihood of the leading digit in a set of numbers This book seeks to improve and systematize the use of Benford's Law in the social sciences to assess the validity of self-reported data The authors first introduce a new measure of conformity to the Benford distribution that is created using permutation statistical methods and employs the concept of statistical agreement In a switch from a typical Benford application this book moves away from using Benford's Law to test whether the data conform to the Benford distribution to using it to draw conclusions about the validity of the data The concept of Benford validity is developed which indicates whether a dataset is valid based on comparisons with the Benford distribution and in relation to this diagnostic procedure that assesses the impact of not having Benford validity on data analysis is devised **Interrogating Boundaries of the Nonhuman** Sune Borkfelt, Matthias Stephan, 2022-05-23 *Interrogating Boundaries of the Nonhuman* Literature Climate Change and Environmental Crises asks whether literary works that interrogate and alter the terms of human nonhuman relations can point to new more sustainable ways forward Bringing insights from the field of literary animal studies a diverse and international group of scholars examine literary contributions to the ecological framing of human nonhuman relationships Collectively the contributors to this edited collection contemplate the role of literature in the setting of environmental agendas and in determining humanity's path forward in the company of nonhuman others *The World in Which We Occur* Neil W. Browne, 2007-10-31 Understanding our environment American philosopher John Dewey considered all human endeavors to be continuous with the natural world In his writings particularly *Art as Experience* 1934 Dewey insists on the primacy of the environment in aesthetic experience Dewey's conception of environment includes both the natural and the man-made Neil Browne highlights this notion in order to define what he terms pragmatist ecology a practice rooted in the interface of the cultural and the natural which he finds to be a significant feature of some of the most important ecological writing of the last century To fully understand human involvement in the natural world Browne argues disciplinary boundaries must be opened up This is primarily important between the arts and science with profound implications for the practice of democracy The degradation of the physical

environment and democratic decay for Browne are rooted in the same problem our persistent belief that humans are somehow separate from their physical environment Browne probes the work of a number of major American writers through the lens of Dewey's philosophy Among other texts he examines John Muir's *My First Summer in the Sierra* 1911 *Sea of Cortez* 1941 by John Steinbeck and Edward Ricketts Rachel Carson's three books about the sea *Under the Sea Wind* 1941 *The Sea Around Us* 1951 and *The Edge of the Sea* 1955 John Haines's *The Stars the Snow the Fire* 1989 Tarry Lopez's *Arctic Dreams* 1986 and Terry Tempest Williams's *Refuge* 1991 Together these texts with their combinations of scientific observation and personal meditation challenge the dichotomies to which we've become accustomed and affirm the values of a pragmatist ecology one in which ecological and democratic values go hand in hand

On a Farther Shore William Souder,2013-09-03 A New York Times Notable Book of 2012 Rachel Carson loved the ocean and wrote three books about its mysteries But it was with her fourth book Silent Spring that this unassuming biologist transformed our relationship with the natural world Silent Spring was a chilling indictment of DDT and other pesticides that until then had been hailed as safe and wondrously effective It was Carson who sifted through all the evidence documenting with alarming clarity the collateral damage to fish birds and other wildlife revealing the effects of these new chemicals to be lasting widespread and lethal Silent Spring shocked the public and forced the government to take action despite a withering attack on Carson from the chemicals industry It awakened the world to the heedless contamination of the environment and eventually led to the establishment of the EPA and

to the banning of DDT By drawing frightening parallels between dangerous chemicals and the then pervasive fallout from nuclear testing Carson opened a fault line between the gentle ideal of conservation and the more urgent new concept of environmentalism Elegantly written and meticulously researched On a Farther Shore reveals a shy yet passionate woman more at home in the natural world than in the literary one that embraced her William Souder also writes sensitively of Carson's romantic friendship with Dorothy Freeman and of Carson's death from cancer in 1964 This extraordinary new biography captures the essence of one of the great reformers of the twentieth century **Silent Spring at 50** Roger Meiners, Pierre Desrochers, Andrew Morriss, 2012-09-18 Widely credited with launching the modern environmental movement when published 50 years ago Rachel Carson's Silent Spring had a profound impact on our society As an iconic work the book has often been shielded from critical inquiry but this landmark anniversary provides an excellent opportunity to reassess its legacy and influence In Silent Spring at 50 The False Crises of Rachel Carson a team of national experts explores the book's historical context the science it was built on and the policy consequences of its core ideas Their findings much of what Carson presented as fact was slanted and today we know much of it is simply wrong
