An Ecosystem Services Approach to Assessing the Impacts of the Deepwater Horizon Oil Spill in the Gulf of Mexico National Research Council,Division on Earth and Life Studies,Ocean Studies Board,Committee on the Effects of the Deepwater Horizon Mississippi Canyon-252 Oil Spill on Ecosystem Services in the Gulf of Mexico,2014-01-20

As the Gulf of Mexico recovers from the Deepwater Horizon oil spill natural resource managers face the challenge of understanding the impacts of the spill and setting priorities for restoration work The full value of losses resulting from the spill cannot be captured however without consideration of changes in ecosystem services the benefits delivered to society through natural processes

An Ecosystem Services Approach to Assessing the Impacts of the Deepwater Horizon Oil Spill in the Gulf of Mexico discusses the benefits and challenges associated with using an ecosystem services approach to damage assessment describing potential impacts of response technologies exploring the role of resilience and offering suggestions for areas of future research This report illustrates how this approach might be applied to coastal wetlands fisheries marine mammals and the deep sea each of which provide key ecosystem services in the Gulf and identifies substantial differences among these case studies The report also discusses the suite of technologies used in the spill response including burning skimming and chemical dispersants and their possible long term impacts on ecosystem services

Global Dynamics of the Earth: Applications of Viscoelastic Relaxation Theory to Solid-Earth and Planetary Geophysics Roberto Sabadini,Bert Vermeersen,Gabriele Cambiotti,2016-05-27

This volume opens up new perspectives on the physics of the Earth s interior and planetary bodies for graduate students and researchers working in the fields of geophysics planetary sciences and geodesy It looks at our planet in an integrated fashion linking the physics of its interior to geophysical and geodetic techniques that record over a broad spectrum of spatial wavelengths and time scales the ongoing modifications in the shape and gravity field of the planet Basic issues related to the rheological properties of the Earth and to its slow deformation are considered in both mathematical and physical terms within the framework of an analytical relaxation theory Fundamentals of this theory are developed in the first two Chapters Chapters 3 9 deal with a wide range of applications ranging from changes in the Earth s rotation to post seismic deformation and from sea level variations induced by post glacial rebound to tidal deformation of icy moons of the Solar System This Second Edition improves substantially our formalism implementing compressibility in viscoelastic relaxation Chapter 5 now contains new developments in the physics of the gravitational effects of large earthquakes at subduction zones made possible by new

gravity data from space missions The new Chapter 9 of this Second Edition on deformation and stresses of icy moons enlarges the applications of the book to Planetology dealing with the additional complications in the theory of viscoelastic relaxation introduced by the shallow low viscosity zones and inviscid water layers of the moons of Jupiter and Saturn

Sea-level Change in Mesolithic Southern Scandinavia Peter Moe Astrup, 2018-12-17 The

seabed in southern Scandinavia contains numerous traces of a submerged landscape that is thought to be the remnant of a once important habitat for Mesolithic hunter gatherers. Large parts of this landscape were gradually flooded by rising seas between 9500 and 4000 BC and perceptions of the Maglemose culture 9500-6400 BC have consequently been based almost exclusively on former inland settlements. As a result, Early and Late Mesolithic societies have been understood as almost diametrically opposed with regards to their reliance upon marine resources and their degree of sedentism. The main objective of the book is to investigate two questions that are directly related to our current understanding of the populations of the now submerged areas: 1. Do we have a representative picture of the spread of Early Mesolithic sites in southern Scandinavia or does the weighting towards inland sites reflect the fact that coastal sites have not been identified below present day sea level? 2. How did sea level changes impact Mesolithic populations at different temporal and spatial scales and how were these experienced from 8000-4000 BC? The book presents an extensive and up to date review of various types of evidence from the Boreal period such as faunal remains, fishing instruments, $\delta^{13}C$ values in bones, settlement positions and available marine resources. These are used to discuss the extent to which marine resources were utilised in the Maglemose culture. Another central component of this book is a series of new coastline models made to determine the Mesolithic sea level changes, coastline positions. The eight new coastline models are created to facilitate new evaluations of possible relationships between sea level changes and cultural changes. On the basis of the new coastline models, the book also presents the preliminary results of 47 diver investigations conducted with the aim of identifying potential coastal settlements from the Maglemose culture.

Encyclopedia of Modern Coral Reefs David Hopley, 2010-11-26. Coral reefs are the largest landforms built by plants and animals. Their study therefore incorporates a wide range of disciplines. This encyclopedia approaches coral reefs from an earth science perspective, concentrating especially on modern reefs. Currently, coral reefs are under high stress, most prominently from climate change, with changes to water temperature, sea level and ocean acidification particularly damaging. Modern reefs have evolved through the massive environmental changes of the Quaternary, with long periods of exposure during glacially lowered sea level periods and short periods of interglacial growth. The entries in this encyclopedia condense

the large amount of work carried out since Charles Darwin first attempted to understand reef evolution. Leading authorities from many countries have contributed to the entries covering areas of geology, geography and ecology, providing comprehensive access to the most up-to-date research on the structure, form and processes operating on Quaternary coral reefs.

Encyclopedia of Paleoclimatology and Ancient Environments Vivien Gornitz, 2008-10-31. One of Springer's Major Reference Works, this book gives the reader a truly global perspective. It is the first major reference work in its field. Paleoclimate topics covered in the encyclopedia give the reader the capability to place the observations of recent global warming in the context of longer-term natural climate fluctuations. Significant elements of the encyclopedia include recent developments in paleoclimate modeling, paleo-ocean circulation as well as the influence of geological processes and biological feedbacks on global climate change. The encyclopedia gives the reader an entry point into the literature on these and many other groundbreaking topics.

Sea Level Change and Maritime Boundaries Antoine Grima, 2023-06-23. Climate change is modifying in varying measure the coastal geography of States. The phenomenon is not temporary but is expected to carry on during the 21st century and beyond. A distinctive feature of modern international law is the concept of maritime zones. Each maritime area is subject to an intricate scheme of States' rights and obligations. Coastal geography is a fundamental component of a long-standing method developed and agreed upon between States to establish the outward limits of these areas. A feature of this method is the baseline. In international law, it is the only reference line from where the outward limits of maritime zones are measured. There are clear rules on how this is established along a coast. There is a concern amongst a number of States that rising sea water levels as a result of climate change may compel them to shift their baselines inward, thus affecting the outward limits of their maritime zones. It is clear that the stability of maritime boundaries is put into question and this may bring about serious political, legal and economic repercussions. This concern may also affect the outcome of dispute settlement procedures before a competent international court or tribunal, the purpose of which is to resolve overlapping maritime claims. Key questions emerge: What is the role played by coastal geography in the legal regime determining the outward limits of maritime zones? What are the consequences of changes to coastal geography? To what extent are dispute settlement procedures before a Court or Tribunal immune from this concern? Is international law able to address this? If so, in what way and what are its limits? What can be done to resolve this?

Shortly after the creation of the Vrije Universiteit Brussel (Free University Brussels) in 1970, currently labelled as VUB, a Department of Quaternary Geology was installed within the Faculty of Science in 1974. At the beginning, it dealt mainly with the study of periglacial loess deposits of the Pleistocene Glacial Period in Central Belgium and with coastal deposits in relation to sea level rise during the warm Holocene period covering the last 10,000 years, in which the dawn of civilization took place step by step. Today, the same research teams widen their scope of interest; they are presently studying

the loess plateau in the People's Republic of China and the world wide problems associated with sea level rise coastal erosion being one of the most devastating natural hazards More and more emphasis is put on problems concerning environmental engineering and those dealing with global change Since 1975 UNESCO sponsored a number of symposia of the International Union for Quaternary Research INQUA whose secretariat was located on the VUB Campus grounds from 1973 to 1982 In 1981 the Applied Geology Department of the Faculty of Applied Sciences was created The NATO Advanced Research Workshop ARW organized in Fuerteventura Canary Islands Spain in March 1989 was a climax of this series of Global Change gatherings As Rector of the VUB I am satisfied that the VUB through its Earth Technology Institute of both USA and Belgium could cooperate with NATO and the National Science Foundations in cosponsoring such an initiative
