Neptune's Ark David Rains Wallace,2007-05-14 Spanning five hundred million years of evolution a study of marine life along the Pacific coast of North America captures the remarkable diversity of creatures past and present that have made the habitat their home from ancient giant sea cows and flightless toothed birds to modern day orcas and sea otters

Dinosaurs at the Dinner Party Edward Dolnick,2025-08-12 From the bestselling author of The Clockwork Universe and The Writing of the Gods an utterly delightful hugely entertaining Air Mail book about the eccentric Victorians who discovered dinosaur bones leading to a whole new understanding of human history In the early 1800s the natural world was a safe and cozy place or so people believed But then a twelve year old farm boy in Massachusetts stumbled on a row of fossilized three toed footprints the size of dinner plates the first dinosaur tracks ever found Soon in England scientists unearthed enormous bones that reached as high as a man s head Outside of myths and fairy tales no one had even imagined that creatures like three toed giants had once lumbered across the land nor dreamed that they could all have vanished hundreds of millions years ago In Dinosaurs at the Dinner Party celebrated storyteller and historian Edward Dolnick leads us through a compelling true adventure as the paleontologists of the early 19th century puzzled their way through the fossil record to create the story of dinosaurs we know today The tale begins with Mary Anning a poor uneducated woman who had a sixth sense for finding fossils buried deep inside cliffs moves to William Buckland an eccentric geologist who filled his home with specimens and famously pieced together a prehistoric scene from the fossil record inside a cave and then on to the controversial Richard Owen the era s best known scientist and the one who coined the term dinosaur Exuberant Kirkus Reviews entertaining erudite and featuring an unconventional cast of characters Dinosaurs at the Dinner Party tells the story of how the accidental discovery of prehistoric creatures upended humanity s understanding of the world and its own place within it

Paleoecology David J. Bottjer,2016-02-10 PALEOECOLOGY PALEOECOLOGY Past Present and Future Paleoecology is a discipline that uses evidence from fossils to provide an understanding of ancient environments and the ecological history of life through geological time This text covers the fundamental approaches that have provided the foundation for present paleoecological understanding and outlines new research areas in paleoecology for managing future environmental and ecological change Topics include the use of actualism in paleoecology development of paleoecological models for paleoenvironmental reconstruction taphonomy and exceptional fossil preservation evolutionary paleoecology and ecological change through time and conservation paleoecology Data from

studies of invertebrates vertebrates plants and microfossils with added emphasis on bioturbation and microbial sedimentary structures are discussed Examples from marine and terrestrial environments are covered with a particular focus on periods of great ecological change such as the Precambrian Cambrian transition and intervals of mass extinction Readership This book is designed for advanced undergraduates and beginning graduate students in the earth and biological sciences as well as researchers and applied scientists in a range of related disciplines

Singing Whales and Flying Squid Richard Ellis, 2006-01-01 Two thirds of this planet is covered by water inhabited by an incredible variety of living organisms ranging in size from microbe to whale and in abundance from scarce to uncountable Whales and dolphins must surface to breathe and some fishes occupy surface waters and can easily be seen from boats or shore but most of the marine bio profusion is hidden from human eyes often under thousands of feet and millions of tons of water which is usually cold dark and utterly inhospitable to humans By definition the study of marine life has been quantitatively and qualitatively different from the study of terrestrial life it is if you will a different kettle of fish What do we know today how have we learned it and what remains unknown and unknowable about inner space Because there have been so few human visitors to the uninviting world of the deep sea scientists have had to rely on trawled specimens photographs taken by robotic cameras or occasionally observations from deep diving submersibles to get even the vaguest idea of the nature of life in the abyss So far even our most elaborate efforts to penetrate the blackness have produced only minimal results It is as if someone lowered a collecting basket from a balloon high above the tropical rain forest floor and tried to analyze the nature of life in the jungle from a couple of random hauls The inner space of the deep offers the last frontier on the planet Even now we know more about the back side of the moon than we do about the bottom of the ocean but then the surface of the moon is not hidden under miles of impenetrable water But we do know that living in this inaccessible medium are some of the most fascinating creatures on Earth An understanding of the interrelationships between various creatures including the one predator that has the power to distort damage or even eliminate populations of marine animals is necessary if we are to survive in harmony with these populations Although new technologies have given us tools to better census the whales dolphins and fishes and to see heretofore unexpected life and geological forms deep under the sea we are a long way from comprehending the nature and importance of marine biodiversity Singing Whales Flying Squid and Swimming Cucumbers is an attempt to put the search for knowledge into perspective to try to find out how we got here and where with the help of curiosity science and technology we might be headed With this as our Baedeker we will voyage through time and space tracing the history of the discovery of marine biology from the moment that the first scientists although for the most part science had barely been invented tried to figure out what sorts of creatures lived in the Mediterranean the sea right off their shores So join Richard Ellis on an underwater adventure like no other you ve ever taken or heard of a voyage to discover the mysteries and reveal the wonders of marine life more unusual and more astonishing than you or anyone else ever imagined

Oceans of Kansas Michael J.

Everhart,2021-12-22 Excellent Those who are interested in vertebrate paleontology or in the scientific history of the American midwest should really get a copy PalArch s Journal of Vertebrate Paleontology Revised updated and expanded with the latest interpretations and fossil discoveries the second edition of Oceans of Kansas adds new twists to the fascinating story of the vast inland sea that engulfed central North America during the Age of Dinosaurs Giant sharks marine reptiles called mosasaurs pteranodons and birds with teeth all flourished in and around these shallow waters Their abundant and well preserved remains were sources of great excitement in the scientific community when first discovered in the 1860s and continue to yield exciting discoveries 150 years later Michael J Everhart vividly captures the history of these startling finds over the decades and re creates in unforgettable detail these animals from our distant past and the world in which they lived above within and on the shores of America s ancient inland sea Oceans of Kansas remains the best and only book of its type currently available Everhart s treatment of extinct marine reptiles synthesizes source materials far more readably than any other recent nontechnical book length study of the subject Copeia The book will be most useful to fossil collectors working in the local region and to historians of vertebrate paleontology Recommended Choice Swordfish Richard Ellis,2013-04-15 Provides a comprehensive history of the swordfish from prehistoric fossils to its present day endangerment and describes its adaptability and its relationship with humans **Fossil Legends of the First Americans** Adrienne Mayor,2023-04-11 This book examines the discoveries of enormous bones and uses of fossils for medicine hunting magic and spells Well before Columbus Native Americans observed the mysterious petrified remains of extinct creatures and sought to understand their transformation to stone In perceptive creation stories they visualized the remains of extinct mammoths dinosaurs pterosaurs and marine creatures as Monster Bears Giant Lizards Thunder Birds and Water Monsters Their insights some so sophisticated that they anticipate modern scientific theories were passed down in oral histories over many centuries Drawing on historical sources archaeology traditional accounts and extensive personal interviews Adrienne Mayor takes us from Aztec and Inca fossil tales to the traditions of the Iroquois Navajos Apaches Cheyennes and Pawnees **Species, Serpents, Spirits, and Skulls** Sherrie Lynne Lyons,2010-07-02 Science permeates nearly every aspect of our lives and yet as current debates over intelligent design the causes of global warming and alternative health practices indicate the question of how to distinguish science from pseudoscience remains a difficult one To address this question Sherrie Lynne Lyons draws on four examples from the nineteenth century sea serpent investigations spiritualism phrenology and Darwin s theory of evolution Each attracted the interest of prominent scientists as well as the general public yet three remained at the edges of scientific respectability while the fourth evolutionary theory although initially regarded as scientific heresy ultimately became the new scientific orthodoxy Taking a serious look at the science behind these examples Lyons argues that distinguishing between science and pseudoscience particularly in the midst of discovery is not as easy as the popular image of science tends to suggest Two examples of present day controversies surrounding evolutionary psychology and the meaning of fossils confirm

this assertion She concludes that although the boundaries of what constitutes science are not always clear cut the very intimate relationship between science and society rather than being a hindrance contributes to the richness and diversity of scientific ideas Taken together these entertaining and accessible examples illuminate important issues concerning the theory practice and content of science **Dinosaurs and Other Reptiles from the Mesozoic of Mexico** Héctor E.

Rivera-Sylva,Kenneth Carpenter,Eberhard Frey,2014-04-15 This overview of dinosaur discoveries in Mexico synthesizes current information about the geography and environment of the region during the Mesozoic when it was the western margin of the ancient continent of Pangea The book summarizes research on various groups including turtles lepidosauromorphs plesiosaurs crocodyliforms pterosaurs and last but not least dinosaurs In addition chapters focus on trackways and other trace fossils and on K P boundary the Chicxulub crater beneath the Gulf of Mexico has been hypothesized as the site of the boloid impact that killed off the dinosaurs Dinosaurs and Other Reptiles from the Mesozoic of Mexico is an up to date informative volume on an area that has not been comprehensively described until now [Ocean News & Technology](#) ,2003

The Concept of Water Rupert D. V. Glasgow,2009 Water is commonly taken for granted and treated with contempt yet it is the very foundation of human existence Assuming countless forms it is deeply associated both with life and death body and soul purity and pollution creation and destruction The Concept of Water seeks to bring together the various aspects of our deeply ambiguous relationship with water providing a systematic account of its symbolic and philosophical significance This involves looking at how water has been conceived and the role it has played in everyday thought mythology literature religion philosophy politics and science both across cultures and through history R D V Glasgow was born in Sheffield and currently lives in Zaragoza His previous books are Madness Masks and Laughter 1995 Split Down the Sides 1997 and The Comedy of Mind 1999 **Fossil Impossible** Sven Erik Gehrman,2023-02-14 If you put the fossil relics of prehistoric

creatures in relation to the recent species living today you come to astonishing results Many fossils which are supposed to have been formed over millions of years by gradual processes of deposition and fossilisation testify to the exact opposite They are therefore actually completely impossible legacies of prehistory And it is the intention of this work to make the reader think about this Beyond that it is also a matter of showing why science and theology have become completely senseless enemies and how we are all obviously to be latently influenced The author of this work was not interested in supporting one side or the other of this conflict But above all to re enter into a factual dialogue and to discard old thought patterns and didactic mistakes And one thing above all To learn again to discuss with each other in a factual fair and constructive way Long live the subject **Prehistoric Australasia** Michael Archer,Suzanne J. Hand,John Long,Peter Schouten,Trevor H. Worthy,2023-04-03 For most of the past 300 million years the world s continents were interlinked as the supercontinents Pangea and then Gondwana Around 50 million years ago Australia tore itself free from Antarctica to become the huge splendidly isolated island it is today Over time its creatures began to evolve in ways not seen anywhere else on Earth with

tree climbing crocodiles gigantic venomous lizards walking omnivorous bats and flesh eating kangaroos roaming the continent Prehistoric Australasia Visions of Evolution and Extinction presents some of the most extraordinary creatures the world has ever seen all unique to Australia New Guinea New Zealand and their surrounding islands Over 100 meticulously painted panoramas by palaeoartist Peter Schouten are accompanied by descriptions of the unique environments and features of these animals written by four of Australia's foremost palaeontologists This book explores the nature and timing of extinction events in the Southern Hemisphere considers whether some of these losses might be able to be reversed and how we can use the fossil record to help save today's critically endangered species Through stunning artwork and fascinating text Prehistoric Australasia brings this globally unique transformation over time to glorious colourful life Winner The Royal Zoological Society of NSW 2023 Whitley Medal

Biology of Turtles Jeanette Wyneken, Matthew H. Godfrey, Vincent Bels, 2007-12-26 Featuring in depth contributions from an international team of experts the Biology of Turtles provides the first comprehensive review of the Testudinata The book starts with the premise that the structure of turtles is particularly interesting and best understood within the context of their development novelty functional diversity and e

No Turning Back Richard Ellis, 2009-10-06 Nearly every species that has lived on earth is extinct The last of the dinosaurs was wiped out after a Mount Everest sized meteorite slammed into the earth 65 million years ago The great flying and marine reptiles are no more Before humans crossed the Bering Land Bridge some 15 000 years ago North America was populated by mastodons mammoths saber toothed tigers and cave bears They too are MIA The passenger pigeon once the most numerous bird in North America is gone forever In *No Turning Back* renowned naturalist Richard Ellis explores the life and death of animal species immortalizing creatures that were driven to extinction thousands of years ago and those more recently He documents those that were brought back from the brink and most surprisingly he reveals animals not known to exist until the twentieth century an antidote to extinction
