Sea Monster:

Sea Monsters Walter Buehr, 1970 **Sea Monsters** Joseph Nigg, 2014-01-03 The mythic creature expert and author of *Phoenix* takes readers through a bestiary of sea monsters featured on the famous 16th century map *Carta Marina*. In the sixteenth century sea serpents, giant men eating lobsters, and other monsters were thought to swim the waters of Northern Europe, threatening seafarers who ventured too far from shore. Thankfully, Scandinavian mariners had Olaus Magnus, who in 1539 charted these fantastic marine animals in his influential map of the Nordic countries, the *Carta Marina*. In *Sea Monsters*, mythologist Joseph Nigg brings readers face to face with these creatures and other magnificent components of Magnus's map. Nearly two meters wide in total, the map's nine wood block panels comprise the largest and first realistic portrayal of the region. But in addition to its important geographic significance, Magnus's map goes beyond cartography to scenes both domestic and mystic. Close to shore, Magnus shows humans interacting with common sea life: boats struggling to stay afloat, merchants trading, children swimming, and fisherman pulling lines. But from the offshore depths rise some of the most terrifying sea creatures imaginable, like sea swine, whales as large as islands, and the Kraken. In this book, Nigg draws on Magnus's own text to further describe and illuminate these inventive scenes and to flesh out the stories of the monsters. *Sea Monsters* is a stunning tour of a world that still holds many secrets for us, land dwellers who will forever be fascinated by reports of giant squid and the real-life creatures of the deep that have proven to be as bizarre and otherworldly as we have imagined for centuries. It is a gorgeous guide for enthusiasts of maps, monsters, and the mythic. A beautiful new exploration of the *Carta Marina*. Wired

A Sea Monster's Tale Colin Speedie, 2021-06-08 There are few marine creatures as spectacular as the Basking Shark At up to 11 metres in length and seven tonnes in weight this colossal plankton feeding fish is one of the largest in the world second only to the whale shark Historically Basking Sharks were a familiar sight in the northern hemisphere off the coasts of Norway Scotland Ireland Canada and the USA for example In an 18th Century world without electricity they became the focus of active hunting for their huge livers containing large amounts of valuable oil primarily used in lamps Catch numbers were small enough to leave populations largely intact but during the 20th Century a new breed of hunter joined the fray some driven as much by a need for adventure as for financial gain With improved equipment and experience they exploited the shark on an industrial scale that drastically reduced numbers leading to localised near extinction in some areas From the 1970s onward a new generation took to the seas this time with conservation in mind to identify where the shark might still be found in the waters around the British Isles employing new technologies to solve long standing mysteries about the behaviour of this elusive creature Using the best of both old and new research techniques the case was built to justify the species becoming one of the most protected sharks in the oceans Today the Basking Shark is a much loved cornerstone of our natural heritage There are positive signs that the population has stabilised and may even be slowly recovering from the damage of the past proving that timely conservation measures can be effective Join us on a journey amidst wild seas places people and conservation history in the battle to protect this iconic creature a true sea monster's tale
