remains unsatisfactory if it does not include at its very basis an understanding of the fact that humans are on a perpetual journey towards authentic power In fact authentic empowerment is the target and the purpose of all human beings and the evolutionary processes they undergo

Charles Bonnet, Analytical Essay on the Faculties of the Soul Charles Bonnet,2022 In the course of the eighteenth century understanding human cognitive life came to be construed as something to be explored in terms of the physiology of the sensory organs the nerves and the brain a form of naturalization that effectively moved cognition out of the realm of philosophy as it had traditionally been understood Bonnet s Analytical Essay on the Faculties of the Soul was at the forefront of these developments and this is its first English translation Drawing on his earlier work in natural history he was the leading entomologist of his era he approaches problems of the nature of the mind via the physiology and anatomy of the brain and sensory systems His approach is one of reverse engineering starting from an organic statue without faculties and investigating how it would need to be modified to produce a human being Bonnet takes up a position that cuts across the standard understanding of the period as a clash between materialism and dualism While his approach was rigorously naturalistic and physiological this did not lead him to reject the notion of a soul Instead he argues that in order to make sense of their sensory abilities we need to attribute a soul to animals as well as human beings At the same time he argues that if personal immortality is to be possible it can be conceived along the lines of insect metamorphosis which shows how different biological forms can harbour a single identity

dust jacket The Seat of Consciousness in Ancient Literature Richard E. Lind,2015-01-09 For early civilizations consciousness and the sense of self were experienced as located in the center of the body most often near to or within the physical heart Enlightenment was understood as the illumination of a transformed spiritual heart Thus the mind of the body as a whole was represented by the heart soul In contrast modern culture places consciousness within the brain resulting in a mind body dualism This separation of mind and body has recently been emphasized as characteristic of the psychopathologies of the modern self This volume explores the understanding and experience of consciousness in the earliest civilizations before about 500 BCE Beginning with a description of ancient Western and Eastern heart consciousness the psychological and spiritual manifestations of the ancient mature heart soul are summarized Ancestor worship lineage identity primitive consciousness and the ways in which the external world was mirrored by the inner world provide additional clues about the experience of heart consciousness Finally the work addresses the fundamental changes in the experience of consciousness that led to the mind body dualism of today
