Papovaviridae The Polyomaviruses:

The Papovaviridae Norman P. Salzman, 2011-10-21 It has been more than twenty years since the isolation of polyoma virus and SV40 and the reports that they could produce tumors in animals and transformation of cells in culture What was startling was that these biologic properties are associated with viruses that contain genetic information that is able to code for only five or six proteins Since that time investigations with these viruses have been in four principal areas One major area of study has been on cells transformed by viruses that show altered growth properties and specify new viral and cellular proteins Transformation studies have focused on the tumor T antigens that are specified by the virus and are required to initiate and to maintain the transformed state Current studies on transformation are summarized in Chapter 4 The second broad area of investigation concerns replication of viruses during a lytic cycle of infection T antigens that are the hallmark of transformed cells are also expressed in cells that are lytically infected and are required for viral DNA replication and also function to alter rates of transcription of the early and late viral genes Except for T antigen virus replication depends on the cellular enzymatic machinery and so the description of viral macromolecular synthesis has provided valuable insights into the cellular biosynthetic pathways These studies are described in Chapters 1-3 The studies that have medical relevance concern JC and BK viruses and there is evidence of widespread exposure of human populations to these agents **Polyomaviruses**

and Human Diseases Nasimul Ahsan, 2007-06-25 Science never solves a problem without creating ten more George Bernard Shaw How prophetic the above words prove to be when applied to the advances of 20th century medicine Prior to Banting and Best clinicians were unaware of the ravages of diabetes patients simply wasted away and died Following the purification of insulin clinicians now had to deal with diabetic retinopathy diabetic nephropathy and all the other complications of long term diabetes A little over 50 years ago the first successful human kidney transplant was performed in Boston The first 30 years of the experience had successes when compared to the alternative but were a constant struggle to get even 50% of the grafts from deceased donors to survive more than a year However the science continued to advance knowledge of the immune response With this came more and increasingly powerful tools for the clinician Suddenly success rates of 80-90% at one year were attainable With this success came new problems new complications and clinicians now had to worry about the long term consequences of their therapy as patients were surviving with functional grafts for extended periods A particular infectious complication evolved with the application of ever more powerful immunosuppressant drugs Astute clinicians noted that occasionally cellular rejections seemed to get worse with steroids Despite their best efforts and the use of powerful drugs patients lost their grafts to overwhelming interstitial infiltrates not seen before Human Polyomaviruses Kamel Khalili, Gerald L. Stoner, 2004-03-24 Human Polyomaviruses Molecular and Clinical perspectives Edited by Kamel Khalili and Gerald L. Stoner Our understanding of human polyomaviruses has evolved profoundly in the last fifteen years creating an urgent need for an updated resource Drs Khalili and Stoner have collected the contributions of

renowned researchers and clinicians in this cutting edge volume Human Polyomaviruses Molecular and Clinical Perspectives presents in depth analyses comprehensive reviews and timely assessments of recent discoveries and ongoing controversies focused on these important viral pathogens Beginning with an historical perspective this book covers up to date investigations into the molecular biology and pathogenesis of human polyomaviruses All aspects of these persistent infections are subsequently covered including clinical issues from diagnosis to information on treatment and drug trials Central topics are BK virus JC virus Simian virus 40 SV40 and its potential as a human pathogen Progressive multifocal leukoencephalopathy PML This reference is a superb indoctrination for graduate students medical students high level undergraduates and anyone engaged in the study of DNA viruses and their molecular biology evolution transmission and pathological potential
