Seismic Risk Reduction Serguei Balassanian, Armando Cisternas, Mikael Melkumyan, 2013-06-29 In 1998 Armenia was commemorating the tenth anniversary of the catastrophic Spitak earthquake The Second International Conference on Earthquake Hazard and Seismic Risk Reduction sponsored by the Government of the Republic of Armenia and United Nations International Decade for Natural Disaster Reduction UN IDNDR was held in dedication to that event between 14-21 September later referred to as Yerevan Conference The Yerevan Conference has been organized by the National Survey for Seismic Protection NSSP of the Republic of Armenia All level s decision makers from the ministers to the local authorities politicians scientists leaders of the executive and legislative powers psychologists leading businessmen representatives from the private sector and the media as well as from the International Organizations have been invited by the Armenian NSSP to take part in joint discussion of the Seismic Risk Reduction Problem for the first time in the history of such forums Armenian NSSP s such initiative has been triggered by the experience of the Spitak earthquake and other disasters They showed that it will be possible to reduce the risks posed by the natural disaster only through the common efforts of all the community in co operation with the International institutions *Promoting the Adoption and Enforcement of Seismic Building Codes* Robert B. Olshansky, 1998 Provides background information and educational materials to help state officials promote the adoption and enforcement of state and local model building codes that contain the latest seismic provisions These codes can reduce the damage that will occur when future earthquakes strike at risk parts of the country It is intended for state earthquake program managers and hazard mitigation officers in the emergency management agencies of the states and territories prone to earthquakes It is designed to help you convince your state and local governments that codes are effective inexpensive and a good investment for the future of our communities Illustrated *U.S. Geological Survey Professional Paper*, 1994

Advances in Earthquake Engineering for Urban Risk Reduction S. Tanvir Wasti, Guney Ozcebe, 2006-06-15 Earthquakes affecting urban areas can lead to catastrophic situations and hazard mitigation requires preparatory measures at all levels Structural assessment is the diagnosis of the seismic health of buildings Assessment is the prelude to decisions about rehabilitation or even demolition The scale of the problem in dense urban settings brings about a need for macro seismic appraisal procedures because large numbers of existing buildings do not conform to the increased requirements of new earthquake codes and specifications or have other deficiencies It is the vulnerable buildings liable to cause damage and loss of life that need immediate attention and urgent appraisal in order to decide if structural rehabilitation and upgrading are feasible Current economic efficient and occupant friendly rehabilitation techniques vary widely and include the application either of precast concrete panels or layers strips and patches of fiber reinforced polymers FRP in strategic locations The papers in this book many by renowned authorities in earthquake engineering chart new and vital directions of research and application in the assessment and rehabilitation of buildings in seismic regions While several papers discuss the probabilistic prediction and quantification of structural damage others present approaches related with the in situ and

occupant friendly upgrading of buildings and propose both economical and practical techniques to address the problem
