Protoarchitecture Bob Sheil, 2008-08-04 The illusive and uncertain world of translating ideas into matter is a negotiation between the ideal and the real and a central preoccupation of architectural production By invading the toolbox of digital

fabrication design has transgressed into protocols of manufacturing previously the domain of other disciplines and skills sets Craft assembly and installation once the realm of trades are qualities that are now dependent upon design information and its status as an instruction to make The ensuing loop between the physical and tactile the imaginary and speculative has defined a new expectation in making architecture as a construct that is part real part ideal With contributions from Lebbeus Woods Evan Douglas Theo Jansen Shin Egashira and many more Protoarchitecture presents an explicitly diverse collection of works from leading and emerging practitioners educators researchers and visionaries from all corners of this innovative field

Computer-Assisted Language Learning: Concepts, Methodologies, Tools, and Applications Management Association, Information Resources,2019-01-04 In a diverse society the ability to cross communication barriers is critical to the success of any individual personally professionally and academically With the constant acceleration of course programs and technology educators are continually being challenged to develop and implement creative methods for engaging English speaking and non English speaking learners Computer Assisted Language Learning Concepts Methodologies Tools and Applications is a vital reference source that examines the relationship between language education and technology and the potential for curriculum enhancements through the use of mobile technologies flipped instruction and language learning software This multi volume book is geared toward educators researchers academics linguists and upper level students seeking relevant research on the improvement of language education through the use of technology AHMM Neil Spiller,2021-05-10 AHMM is a premier international architectural practice Established over 30 years ago it has won numerous awards including the Stirling Prize Through the contributions of journalists clients fellow professionals and academics this AD issue celebrates the practice s achievements in all areas of architectural production featuring archive material new works and unparalleled access to the AHMM organisation revealing new insights into their work and urban philosophies To get to this eminent position the office has consistently responded in innovative and imaginative ways to the changing imperatives of art science and economics that influence our built environment These parameters have metamorphosed considerably since AHMM was founded in terms of advances in digitisation material science and changes to

contract management what constitutes sustainability procurement routes construction methods collaboration and architectural education Above all this AD will explore AHMM s practice as a holistic design project in itself in terms of building buildings but also in using a design ethos to cope with shifts in workload and the firm s varying business activities and its administration over the years thus providing insight for a future generation of potentially successful architectural professionals

Surface Giuliana Bruno, 2014-06-09 What is the place of materiality the expression or condition of physical substance in our visual age of rapidly changing materials and media How is it fashioned in the arts or manifested in virtual forms In *Surface* cultural critic and theorist Giuliana Bruno deftly explores these questions seeking to understand materiality in the contemporary world Arguing that materiality is not a question of the materials themselves but rather the substance of material relations Bruno investigates the space of those relations examining how they appear on the surface of different media on film and video screens in gallery installations or on the skins of buildings and people The object of visual studies she contends goes well beyond the image and engages the surface as a place of contact between people and art objects As Bruno threads through these surface encounters she unveils the fabrics of the visual the textural qualities of works of art whether manifested on canvas wall or screen Illuminating the modern surface condition she notes how fa ades are becoming virtual screens and the art of projection is reinvented on gallery walls She traverses the light spaces of artists Robert Irwin James Turrell Tacita Dean and Anthony McCall touches on the textured surfaces of Isaac Julien s and Wong Kar wai s filmic screens and travels across the surface materiality in the architectural practices of Diller Scofidio Renfro and Herzog de Meuron to the art of Doris Salcedo and Rachel Whiteread where the surface tension of media becomes concrete In performing these critical operations on the surface she articulates it as a site in which different forms of mediation memory and transformation can take place Surveying object relations across art architecture fashion design film and new media *Surface* is a magisterial account of contemporary visual culture

Computer Vision Systems Bernt Schiele, Gerhard Sagerer, 2003-05-15 Following the highly successful International Conference on Computer Vision stems held in Las Palmas Spain ICVS 99 this second International Workshop on Computer Vision Systems ICVS 2001 was held as an associated workshop of the International Conference on Computer Vision in Vancouver Canada The organization of ICVS 99 and ICVS 2001 was motivated by the fact that the jority of computer vision conferences focus on component technologies However Computer Vision has reached a level of maturity that allows us not only to p form research on individual methods and system components but also to build fully integrated computer vision

systems of significant complexity This opens a number of new problems related to system architecture methods for system synthesis and verification active vision systems control of perception and tion knowledge and system representation context modeling cue integration etc By focusing on methods and concepts for the construction of fully integrated vision systems ICVS aims to bring together researchers interested in computer vision systems Similar to the previous event in Las Palmas ICVS 2001 was organized as a single track workshop consisting of high quality previously unpublished papers on new and original research on computer vision systems All contributions were presented orally A total of 32 papers were submitted and reviewed thoroughly by program committee members Twenty of them have been selected for presentation We would like to thank all members of the organizing and program committee for their help in putting together a high quality workshop

Component-Based Software Quality Alejandra Cechich,Mario Piattini,Antonio Vallecillo,2003-11-06 Component based software development CBSD is no longer just one more new paradigm in software engineering but is effectively used in development and practice So far however most of the efforts from the software engineering community have concentrated on the functional aspects of CBSD leaving aside the treatment of the quality issues and extra functional properties of software components and component based systems The 16 revised chapters presented were carefully reviewed and selected for inclusion in the book together with an introductory survey they give a coherent and competent survey of the state of the art in the area The book the first to focus on quality issues of components and component based systems is organized in topical parts on COTS selection testing and certification software component quality models formal models to quality assessment and CBSD management

Beyond Archigram Hadas A. Steiner,2013-09-13 Beyond Archigram is the first study of the prehistory of digital representation to focus on the magazine Archigram the magazine published in London irregularly between 1961 and 1970 and the name of the group that created it Archigram is among the most significant phenomena to emerge in post war architectural culture The wired environments first advertised on its pages formulated an architectural vocabulary of metamorphosis and obsolescence that cross pollinated industrial and digital technology at the same time as complex systems were becoming commercially available Through archival theoretical and visual analysis Hadas Steiner explores the process through which this model was envisaged and disseminated within an international network of practitioners and shows how the assimilation of Archigram imagery set the course for the visual output of what are now commonplace tools in architectural practice This book will provide a foundation for further inquiry into the integration of digital technology at every level of design

Inclusive Design Rob Imrie,Peter Hall,2003-09-02 First book to document property professionals attitudes and practices towards the building needs of disabled people Discusses elements of best practice in responding to disabled people s design needs Cross national data provided Based on ESRC funded project Supplemented by illustrated case studies

Software Engineering for Large-Scale Multi-Agent Systems Alessandro Garcia,Carlos Lucena,Franco Zambonelli,Andrea Omicini,Jaelson Castro,2003-08-03 Nowadays engineering large scale

software systems means dealing with complex systems composed of pervasive software components that move around and adapt to nondeterministic and open environments like the Internet in order to achieve systems design goals through the coordination of autonomously distributed services. The agent metaphor in particular, software agents and multi agent systems MAS constitutes a promising approach for covering most of the software development life cycle from conceptual modeling and requirements specification to architectural definition, design and implementation. This book presents 17 carefully reviewed papers arranged in order to provide a coherent survey of how to exploit agent properties and MAS issues in today's software systems. The book offers the following topical sections: software engineering foundations, requirements engineering and software architecture, coordination and mobility, reuse, dependability, empirical studies and applications.
