Michael Noah Mautner, 2000 It is the human purpose to propagate Life In this popular science title a well recognized researcher describes how we can seed new solar systems with microbial representatives of our family of organic life The book also describes a life centered astroethics that will motivate these missions based on the unity of all gene protein life a common ancestry a unique complexity and the coincidence of physical laws that allow biology giving life a special place in Nature a shared drive for survival and procreation and a shared future As part of this family it is our purpose to safeguard and expand life in the universe To advance this purpose Professor Mautner pioneered research on the fertilities of extra terrestrial materials in asteroids meteorites The results show that many microorganisms and even plants can grow on resources found commonly in space which are basically similar to Earth materials The conclusions are significant If life can flourish on Earth life can flourish throughout the universe Based on the results on microbes and meteorites the author estimates the ultimate amounts of life that our missions can induce in the cosmological future A life centered astroethics can assure that our descendants will be there to enjoy this future **the latter-day saints' millennial star. vlume xxxviii a.**
