Environmental historian Steven Stoll identifies 1945 as the birth of American environmentalism, the point when conservation and nature advocacy fused with activism to form a political movement. In this thematically organized collection of primary sources, Stoll traces the development of the environmental movement and identifies its central issues and ideologies, including the politics of preservation, population growth, biological interdependence, ecodefense, climate change, ethical consumption, and environmental justice. Stoll's insightful introduction provides students with a solid overview of environmentalism's origins and contextualizes the topics raised by the documents. It will also explore costs of damage to the very resources on which economies rely and the values of environmental goods and services and the controversies surrounding such valuations. It is organized around environment-people interactions, livelihoods, poverty, income, economic growth, environment-environment interactions, do people matter, and people-people interactions, collective action, challenges, institutions.
