Mittal, 2000-09-28 This book chronicles the proceedings of the Second International Symposium on Polymer Surface Modification Relevance to Adhesion held Newark New Jersey May 24 26 1999 Polymeric materials are intrinsically not very adhesionable and this necessitates their surface treatment to enhance their adhesion characteristics to other materials Since the first symposium on this topic held in 1993 there has been a tremendous R Part 2 Other Miscellaneous Surface Modification Techniques and Part 3 General Papers The topics covered include plasma surface modification of a variety of polymers using various plasma gases atmospheric plasma system surface functionalization ultrahydrophobic polymeric surfaces metallization of plasma treated polymers surface modification of polymers via molecular design for adhesion promotion wet chemical methods for polymer surface modification laser surface modification of various polymers UV ozone treatment surface and interface studies of treated polymer surfaces by an array of techniques bioadhesion of polymeric biomaterials to tissue polymer fiber systems and plasma deposited coatings

Modification of Polymers Charles E. Carraher, James A. Moore, 2012-12-06 The sheer volume of topics which could have been included under our general title prompted us to make some rather arbitrary decisions about content Modification by irradiation is not included because the activity in this area is being treated elsewhere We have chosen to emphasize

chemical routes to modification and have striven to present as balanced a representation of current activity as time and page count permit. Industrial applications both real and potential are included. Where appropriate we have encouraged the contributors to include review material to help provide the reader with adequate context. The initial chapter is a review from a historical perspective of polymer modification and contains an extensive bibliography. The remainder of the book is divided into four general areas: Reactions and Preparation of Copolymers; Reactions and Preparation of Block and Graft Copolymers; Modification Through Condensation Reactions; Applications. The chemical modification of homopolymers such as polyvinylchloride, polyethylene, poly(chloroalkylene sulfide), polysulfones, poly(chloromethylstyrene), polyisobutylene, polysodium acrylate, polyvinyl alcohol, polyvinyl chloroformate, sulfonated polystyrene, block and graft copolymers such as poly(styrene-block-ethylene-co-butylene), block styrene-poly(1,4-polybutadiene)-block-ethylene oxide, star-chlorine-telechelic polyisobutylene, poly(isobutylene-co-2,3-dimethyl-1,3-butadiene)-poly(styrene-co-N-butylmethacrylate), cellulose, dextrans and inulin is described.

Plasma Surface Modification of Polymers Mark Strobel, C. S. Lyons, K. L. Mittal, 1994-07. This book is a collection of invited papers previously published in special issues of the Journal of Adhesion Science and Technology written by internationally recognized researchers actively working in the field of plasma surface modification. It provides a current comprehensive overview of the plasma treatment of polymers. In contrast to plasma polymerization, plasma surface modification reactions do not cause thin film deposition and can therefore only modify the surface properties of organic substrates. Plasma surface modifications are fast, efficient methods for improving the adhesion properties and other surface characteristics of a variety of polymeric materials. The focus of this volume is on adhesion phenomena, surface properties and the surface characterization of plasma-treated materials. This book opens with a critical review of the plasma surface modification of polymers for improved adhesion. The remainder of the papers are divided into two sections: one dealing with the characterization of plasma-treated surfaces and the second concerned with various practical applications of plasma-treated surfaces.

Modification of Polymers, 1980 **Heterogeneous Modification of Polymers** Joseph

Jagur-Grodzinski, 1997-07-07. Dealing with bulk and surface modifications, this book covers heterogeneous polymer reactions. Such reactions can yield very different products from the corresponding homogeneous reactions and are of great importance in polymer materials science today. The author combines the discussion of basic principles with an outline of prospective developments leading to novel products and technologies. He concentrates on specific aspects common to heterogeneous polymeric reactions.

Polymer Surface Modification: Relevance to Adhesion, Volume 3 Kash L. Mittal, 2004-08-26. This book documents the proceedings of the Fourth International Symposium on Polymer Surface Modification: Relevance to Adhesion held under the auspices of MST Conferences LLC in Orlando, FL, June 9-11, 2003. Polymers are used for a variety of purposes in a host of technological applications and even a cursory look at the literature will evince that.

Reactive Modifiers for Polymers

S. Al-Malaika, 1997-06-30 There is considerable interest within the polymer industry in developing methods to modify existing polymer systems to achieve improvements in their functional or engineering properties The chemical treatment of polymers either prior to or during processing represents an inexpensive and rapid way of achieving these modifications and a great deal of research is underway directed at improving both the understanding of the processes involved and the development of the practical techniques employed The improvements obtained by chemical treatment range from subtle alteration of the chemical properties of a polymer to wholesale changes in the physical mechanical and chemical properties with the current favourable economics ensuring that industry will continue to exploit the technique in the search for improved polymer materials Written by an international team of authors drawn from both basic and applied research programmes in industry and academia and with a strong emphasis on the underlying chemistry this book forms a timely concise and accessible evaluation of the most promising technologies developed to date Chemists technologists materials scientists and engineers working in all areas of the polymer industry along with academic researchers in those fields will find this book an essential source of reference in the course of their work
