Analysis & the Fullness of Reality Richard H. Jones,2013-03-18 Is the world nothing but matter pushing matter in a void Are humans nothing but soulless machines for the survival of genes Is the mind nothing but the brain Is all science reducible to physics Must scientists restrict the substance and structure of reality to physical forces Does society consist merely of individuals or are holistic forces also at work Is God really no more than a projection of nature society or our psyche Or in each case do new realities emerge that cannot be reduced Virtually every scholarly and popular book and magazine article on the mind science or religion touches on these issues of reductionism But for all the interest in the topic no in depth introduction of the subject exists The objective of this philosophical work is to fill that void This book attempts to provide one common framework for studying how the issue of reduction versus emergence arises in each of the areas in which it comes up the natural sciences philosophy of mind the social sciences and religion It tries to resolve some of the disputes by a new analysis differentiating five types of reductionism and antireductionism ontological structural theoretical conceptual and methodological To help clarify the issues a brief history of how reductionism and emergentism have developed in Western philosophy is also presented By distinguishing different types of reductionism and by examining the issues in all the areas of philosophical interest collectively rather than limiting the discussion to just one area the general issues surrounding reduction versus emergence become clearer This approach brings together many of the most interesting questions today in philosophy science and religious studies The attempt throughout the work is to present the reductionists and emergentists strongest case on each issue and to identify problems with both sides But it is argued that in the end the reductionists in each area currently have the weaker position The work concludes with a discussion of the centrality of nonreducible features in reality and asks whether science under a reductionist vision can ever explain the emergence of higher levels of phenomena

The Divine Quest, East and West James L. Ford, 2016-01-28 Looks at the concept of Ultimate Reality in Hinduism, Buddhism, Judaism and Christianity. Many books have discussed the development of the notion of God in Western monotheistic traditions but how have non-Western cultures conceptualized what those in the West might identify as God? What might be learned by comparing different visions of the Divine such as God, gods, Brahman, Nirvana and Emptiness? James L. Ford engages these fascinating questions, exploring notions of the Divine or Ultimate Reality within Jewish, Christian, Hindu and Buddhist traditions. Looking at a multiplicity of divine conceptions even within traditions, Ford discusses the relationship between imagination and revelation in the emergence of visions of ultimacy, consequences and tendencies associated with particular notions of the Ultimate and how new visions of the Ultimate arise in relation to social, cultural, political and scientific developments. Ford reflects on what can be learned through an awareness of

the various beliefs about the Ultimate and on how such disparate visions influence the attitudes and behavior of people in different parts of the world **Epistemology and Metaphysics for Qualitative Research** Tomas Pernecky, 2016-09-22

Lubashevsky, 2017-02-12 This book tackles the challenging question which mathematical formalisms and possibly new physical notions should be developed for quantitatively describing human cognition and behavior in addition to the ones already developed in the physical and cognitive sciences Indeed physics is widely used in modeling social systems where in particular new branches of science such as sociophysics and econophysics have arisen However many if not most characteristic features of humans like willingness emotions memory future prediction and moral norms to name but a few are not yet properly reflected in the paradigms of physical thought and theory The choice of a relevant formalism for modeling mental phenomena requires the comprehension of the general philosophical questions related to the mind body problem Plausible answers to these questions are investigated and reviewed notions and concepts to be used or to be taken into account are developed and some challenging questions are posed as open problems This text addresses theoretical physicists and neuroscientists modeling any systems and processes where human factors play a crucial role philosophers interested in applying philosophical concepts to the construction of mathematical models and the mathematically oriented psychologists and sociologists whose research is fundamentally related to modeling mental processes *Reframing the Social* Professor Poe Yu-ze Wan, 2013-01-28 Drawing extensively on the research findings of natural and social sciences both in America and Europe Reframing the Social argues for a critical realist and systemist social ontology designed to shed light on current debates in social theory concerning the relationship of social ontology to practical social research and the nature of the social It explores the works of the systems theorist Mario Bunge in comparison with the approach of Niklas Luhmann and critical social systems theorists to challenge the commonly held view that the systems based approach is holistic in nature and necessarily downplays the role of human agency Theoretically sophisticated and investigating the work of a theorist whose work has until now received insufficient attention in Anglo American thought this book will be of interest to those working in the field of social theory as well as scholars concerned with philosophy of social science the project of analytical sociology

Kohav, 2019 The volume investigates the question of meaning of mystical phenomena and conversely queries the concept of meaning itself via insights afforded by mystical experiences The collection brings together researchers from such disparate fields as philosophy psychology history of religion cognitive poetics and semiotics in an effort to ascertain the question of mysticism s meaning through pertinent up to date multidisciplinary The discussion commences with Editor s Introduction that probes persistent questions of complexity as well as perplexity of mysticism and the reasons why problematizing mysticism leads to even greater enigmas One thread within the volume provides the contextual framework for continuing fascination of mysticism that includes a consideration of several historical traditions as well as personal accounts of mystical experiences Two contributions showcase ancient Egyptian and ancient Israelite involvements with mystical alterations of consciousness and Christianity s origins being steeped in mystical praxis and four essays highlight mysticism s formative presence in Chinese traditions and Tibetan Buddhism as well as medieval Judaism and Kabbalah mysticism A second more overarching strand within the volume is concerned with multidisciplinary investigations of the phenomenon of mysticism including philosophical psychological cognitive and semiotic analyses To this effect the volume explores the question of philosophy s relation to mysticism and vice versa together with a Wittgensteinian nexus between mysticism facticity and truth language mysticism and supernormal meaning engendered by certain mystical states cognitive poetic analysis of mystical poetry and a semiotic scrutiny of some mystical experiences and their ineffability

Finally the volume includes an assessment of the so called New Age authors contention of the convergence of scientific and mystical claims about reality The above two tracks are appended with personal contemporary accounts of mystical experiences in the Prologue and a futuristic envisioning as a fictitious chronicle from the time to come of life without things mystical in the Postscript The volume contains fourteen chapters its international contributors are based in Canada Israel United Kingdom and the United States

Prescriptions for the Mind Joel Paris, 2008-06-10 The practice of psychiatry has undergone great changes in recent years In this book Joel Paris MD a veteran psychiatrist provides a fluently written and accessible state of the field assessment Himself a clinician researcher and teacher Paris focuses on the most striking change within the field the diverging roles of psychopharmacology and psychotherapy in contemporary practice Where once psychiatrists were trained in Freudian psychoanalysis which involved more than anything else talking current pressures in mental health practice including those imposed by managed care are leading psychiatrists to treat more and more of their patients exclusively with medication which is cheaper and faster At the same time psychotherapy is increasingly not being taught to new psychiatrists in training even though as Paris reveals there is scientific evidence that both talk therapies and medication can play an important role in the treatment of mental illness These developments are occurring against a backdrop of exploding research in the genetics and neurobiology of mental illness that will continue to drive the field Paris ends by contemplating how going forward psychiatry can best respond to all these forces and proposes a team based approach to mental health care The book will appeal both to specialists and nonspecialists particularly psychiatric residents and fellows medical students considering specialization in psychiatry clinical psychologists social workers and general readers especially consumers of mental health services

Curing the Philosopher's Disease Richard H. Jones, 2009-09-28 Curing the Philosopher's Disease is a philosophical examination of the mysteries surrounding the foundations of science philosophy and religion Much of Western philosophy and science is discussed in order to see our epistemological and metaphysical situation The love hate relation philosophers have with mystery is explored as are the contributions of reductionists and antireductionists postmodern relativists and critical realists naturalists and the religious and theologians and mystics The thrust of the arguments affirms that there are limits to what philosophy science religion and mystical experiences can tell us about reality By acknowledging that some questions may be unanswerable and understanding the importance of that fact even as the answers remain ambiguous our true situation in the world is revealed Mystery should be reinstated as a basic feature when we reflect upon the nature of what we know and who we are Mystery frames all of our claims to fundamental knowledge and we must accept that it will remain a permanent fixture Thus the importance of mystery needs to be reaffirmed today during an era when the fullness of reality is often ignored

Religion, Theatre, and Performance Lance Gharavi, 2011-12-21 The intersections of religion politics and performance form the loci of many of the most serious issues facing the world today sites where some of the world's most pressing and momentous events are contested and played out

That this circumstance warrants continued thoughtful and imaginative engagement from those within the fields of theatre and performance is one of the guiding principles of this volume. This collection features a diverse set of perspectives written by some of the top scholars in the relevant fields on the many modern intersections of religion with theatre and performance. Contributors argue that religion can no longer be conceived of as a cultural phenomenon that is safely sequestered in the private sphere. It is instead an explicitly public force that stimulates and complicates public actions and thus a crucial component of much performance. From mystic theologies of acting to the neuroscience of spirituality in rituals to the performance of secularism, these essays address a broad variety of religious traditions sharing a common conception of religion as a crucial object of discourse, one that is formed by and significantly formative of performance.

The Lonely Mind of God Sherman O'Brien, 2021-01-26

Current students of philosophy or armchair philosophers: Want the answer to the Primordial Existential Question: Why is there something rather than nothing? While history has produced no shortage of attempted answers, clearly none is the answer. Now comes the unique perspective of acosmism to provide a complete and plausible answer. After a lifetime of reflection, acosmist Sherman O'Brien offers this analysis of the issues and a thoughtful, reasoned answer to philosophy's most vexing question. The acosmic answer requires no faith whatsoever, either in supernatural or unexplained causes. In fact, it discourages it. Acosmism rejects both traditional religion and philosophically neglectful science. As a metaphysical system, it is based on an epistemological insight with implications for immortality, determinism, ethics, and ultimate purpose. Reasoned wholly from the ground up, its conclusion is the very meaning of existence. The solution to the Omniscience Riddle becomes the key to understanding how the question is best stated and understood. This book represents one person's effort to make sense of what is true and what only seems to be so. Why is there something rather than nothing? What is your potential role in the entirety of experience? This foray into acosmism offers a path to the genuine understanding of both existence and reality. Note: the main text constitutes roughly two-thirds of the total pages; the remainder being mostly endnotes.

The Rise of the Rich Peter Gran, 2009-02-10

The rise of the west has long been the accepted doctrine for framing analysis for world history. Privileging a Eurocentric approach, this traditional paradigm obscures the significance of the indigenous rich in non-Western regions and fails to recognize the contributions of the Orient. In this book, Peter Gran seeks to reframe current historical debates, presenting a model of analysis based on the rise of the rich. Gran outlines the structure of this new paradigm, building upon meta-narrative concepts from Marxism to liberalism. Rather than a history of clashing civilizations, he identifies a history of resolving conflicts through negotiations among wealthy classes in various regions. Fundamental to his theory is the assumption of non-European ruling classes with power in interregional affairs. Far-reaching in its historical scope, Gran's work lays the foundation for a critical rethinking of world history and offers
