Reflections On The Ice Age In Scotland:

Reflections on the Ice Age in Scotland John E. Gordon, 1997-01-01 **The Oxford Handbook of the Archaeology and Anthropology of Hunter-Gatherers** Vicki Cummings, Peter Jordan, Marek Zvelebil, 2014-04-24 For more than a century the study of hunting and gathering societies has been central to the development of both archaeology and anthropology as academic disciplines and has also generated widespread public interest and debate The Oxford Handbook of the Archaeology and Anthropology of Hunter Gatherers provides a comprehensive review of hunter gatherer studies to date including critical engagements with older debates new theoretical perspectives and renewed obligations for greater engagement between researchers and indigenous communities Chapters provide in depth archaeological historical and anthropological case studies and examine far reaching questions about human social relations attitudes to technology ecology and management of resources and the environment as well as issues of diet health and gender relations all central topics in hunter gatherer research but also themes that have great relevance for modern global society and its future challenges The Handbook also provides a strategic vision for how the integration of new methods approaches and study regions can ensure that future research into the archaeology and anthropology of hunter gatherers will continue to deliver penetrating insights into the factors that underlie all human diversity A Field Guide to British Rivers George Heritage, Andy Large, David Milan, 2021-10-11 Temperate rivers are influenced by many factors including geology climate soils sediment type flow as well as human activity The complex interactions of the non anthropogenic controlling factors have led to a wonderful diversity of river type throughout the British Isles Sadly almost all rivers in the UK have suffered significant and long lasting modification by unsympathetic management that has all but destroyed this variety creating watercourses that are simplified conduits for water and sediment designed primarily to drain the land and reduce flood risk This volume aims to help reverse this illustrating using over 200 images and descriptions this variety of rivers in Britain highlighting the many forms that temperate river systems take and providing an accessible summary of the underlying river science knowledge base A Field Guide to British Rivers covers the full range of upland and lowland channel types and describes the full variety of substrate conditions from bedrock through boulder cobble and gravel to silt dominated systems The authors describe examples gathered from their extensive research and practical experience working with rivers throughout mainland Britain and set those examples in their wider landscape context to exemplify the natural functioning of temperate river types This book offers a practical and contextualised guide to contribute to efforts towards the sympathetic and sustainable restoration and re naturalisation of degraded channels in the UK Offering a unique viewpoint of both the underpinning science and the practicalities of river management A Field Guide to British Rivers is an essential a stand alone guide for anyone involved in river restoration and management as well as for those simply interested in rivers in general Written as a field guide to demonstrate practical examples of river types and to highlight the pressures they experience and their often parlous

condition this book is intended to better inform both river management approaches and the policy necessary to achieve this. Fundamentally the authors seek to demonstrate how the hydrological geomorphological and ecological functions of rivers and their catchments are inexorably intertwined and together how they generate and maintain rivers as dynamic entities.

Quaternary Glaciations - Extent and Chronology J. Ehlers, P.L. Gibbard, Philip D. Hughes, 2011-08-17. The book presents an up to date detailed overview of the Quaternary glaciations all over the world not only with regard to stratigraphy but also with regard to major glacial landforms and the extent of the respective ice sheets. The locations of key sites are included. The information is presented in digital uniformly prepared maps which can be used in a Geographical Information System GIS such as ArcView or ArcGIS. The accompanying text supplies the information on how the data were obtained: geomorphology, geological mapping, air photograph evaluation, satellite imagery, how the features were dated, ¹⁴C, TL, relative stratigraphy and how reliable they are supposed to be. All references to the underlying basic publications are included. Where controversial interpretations are possible e.g. in Siberia or Tibet this is pointed out. As a result the information on Quaternary glaciations worldwide will be much improved and supplied in a uniform digital format. The information on the glacial limits is compiled in digital form by the coordinators of the project and is available for download at <http://booksite.elsevier.com/9780444534477>. Completely updated detailed coverage of worldwide Quaternary glaciations. Information in digital uniformly prepared maps which can be used in a GIS such as ArcView or ArcGIS. Step by step guideline how to open and use ArcGIS files. Possibility to convert the shapefiles into GoogleEarth kmz files. Availability of chronological controls.

Quaternary of South-West England S. Campbell, C.O. Hunt, James D. Scourse, D.H. Keen, N. Stephens, 2012-12-06. STRUCTURE OF THE VOLUME AND TERMINOLOGY USED. This book contains scientific descriptions of 63 localities (Figure A) of at least national importance for Quaternary geology, geomorphology and environmental change in South West England. These sites were selected by the Geological Conservation Review and are accordingly designated GCR sites. Chapter 1 provides an introduction to the Quaternary. Chapter 2 synthesizes the geomorphological development and Quaternary history of the region and outlines the principles involved in site selection. The individual GCR site descriptions form the core of the book. In the following chapters sites are arranged and described in broad geographic areas and by research topic. This is necessitated by the widely disparate nature of the field evidence in South West England: sites demonstrating the full range of Quaternary and geomorphological features are not evenly and conveniently dispersed throughout the region and some areas have significant gaps. Neither do the individual chapters contain sites that necessarily equate with particular site selection networks. Rather the chosen chapter headings provide the least repetitive means of describing the sites and background material. Where possible a chronological approach from oldest to youngest has been used to describe sites within a given chapter. Again this approach is not always possible and a group of sites may show variations on landform or stratigraphic evidence broadly within one major time interval or chronostratigraphic stage; inevitably there are many overlaps.

Geodiversity Murray Gray, 2004-06-25 A counterpoint to biodiversity geodiversity describes the rocks sediments soils fossils landforms and the physical processes that underlie our environment The first book to focus exclusively on the subject Geodiversity describes the interrelationships between geodiversity and biodiversity the value of geodiversity to society as well as current threats to its existence Illustrated with global case studies throughout the book examines traditional approaches to protecting biodiversity and the new management agenda which is starting to be used instead **Hutton's Arse** M. H. Rider, 2005 Featuring spectacular locations across the Northern Highlands of Scotland this book describes modern geological science and explores current theories The extraordinary history of a beautiful landscape should appeal to more general readers as the book combines humour and scientific facts Transactions of the Royal Society of Edinburgh, 2002 **The Quaternary of the Banffshire Coast & Buchan** E. R. Connell, 2000 **Summing Up** Joakim Donner, 2003 **Managing Scotland's Environment** Charles R. Warren, 2002 This book is illustrated with photographs and maps and diagrams It is designed for those studying Scotland's environment at undergraduate and graduate level and for those engaged in farming forestry conservation game sports and employment **Coastal Geomorphology of Great Britain** V. J. May, J. D. Hansom, 2003 Highlights both the conservation value of the coastal geomorphology sites of Great Britain and the important role these sites play in the development of the science of geomorphology Each chapter in this work includes descriptions of the landforms and gives interpretation of dynamics of the geomorphological systems operating within the sites **Discovering the Ice Ages** Tobias Krüger, 2013-06-17 Tobias Krüger explores the discovery of the Ice Ages how the idea was received and what further research it stimulated The approach used in Discovering the Ice Ages is uniquely sweeping The contemporary debates on the subject are compared from an international perspective Krüger retraces the arguments advanced from the middle of the 18th century to the threshold of the 20th century The positions held by defenders of the glacial theory as well as those by its most important opponents are set within the context of the then current understanding of geology In an interdisciplinary overview Krüger then focuses on the impetus gained from early ice age research The most prominent examples worth mentioning are the discovery of trace gases and the greenhouse effect **Exhumation of the North Atlantic Margin** Anthony G. Doré, 2002 *Catholic Thoughts on ...* Frederic Myers, 1874 *The Quaternary of Dumfries and Galloway* R. M. Tipping, 1999 **The Orkney Book** Donald Omand, 2003 Consisting of 67 islands the Orkneys lie to the north of the Scottish mainland This work gives an overview of their history Starting with the prehistoric period it goes on to discuss the flowering of the Celtic Church in the sixth and seventh centuries and the subsequent invasion by the vikings **Proceedings of the Royal Society of Edinburgh** Royal Society of Edinburgh, 1869 List of fellows for 1908 in v 25 Mesolithic Studies in the North Sea Basin and Beyond Clive Waddington, Kristian Pedersen, 2007 The North Sea has acted as both physical barrier separating regions from each other and as the principal means of communication between the same This duality can also be seen in its potential to be both yielding and destructive

providing food and resources but also being capable of causing catastrophe These paradoxical qualities are unlikely to have been lost on our hunter gatherer ancestors and they remain relevant to the way that the sea is perceived today The sixteen papers in this edited volume look at the impact the North Sea had on Northern Europe in the Mesolithic period *British National Bibliography for Report Literature* ,1998
