## **Regenerating The Cities:**

*Creating Regenerative Cities* Herbert Girardet, 2014-09-19 Large modern cities have effectively declared their independence from nature But while they take up only three percent of the world's land surface their ecological footprints actually cover the entire globe Humanity is building an urban future yet urban resource use is threatening the future of humanity and the natural world To meet the aspirations of city people in both developing and developed countries bold new initiatives are needed Modern cities are an astonishing human achievement As centres of innovation they are humanity's cultural playgrounds Their communication and transport systems have developed a global reach They are attractive to investors because they can offer a vast variety of services at comparatively low per capita costs But are they viable as ecological systems The planning of new cities as well as the retrofit of existing cities needs to undergo a profound paradigm shift Mere sustainable development is not enough To be compatible with natural systems cities need to move away from linear systems of resource use and learn to operate as closed loop circular systems To ensure their long term future they need to develop an environmentally enhancing restorative relationship between themselves and the natural systems on which they still depend *Creating Regenerative Cities* is a concise solution oriented manual for creating regenerative urbanisation A wide range of technical management and policy solutions already exist but implementation has been too slow and too little in large part because the kinds of holistic approaches needed are still unfamiliar to fragmented and process driven urban policy making and governance Herbert Girardet's 30 years experience as an ecologist thinker film maker and consultant working around the world has created this unique combination of tried and tested best practices and policies which outlines the fundamental shifts needed in the way we think about our cities

*Regenerating the Cities* Michael Parkinson, Bernard Foley, Dennis R. Judd, 1989

*Regenerating Cities* Maria Elena Zingoni de Baro, 2022-01-18 This book sets out the discussion on how cities can contribute solutions to some of the challenges the urbanised world is facing such as the pressure of growing populations mitigation of effects of and adaptation to globally changing environmental climate and public health conditions Presenting a detailed explanation of the causes behind the current state of modern cities the book advocates for a paradigm shift to improve the quality of life of ever increasing urban inhabitants whilst nourishing the natural systems that sustain human and non human life in the planet Recognising the precious role that nature plays in the functioning of cities it delves into the study of biophilic design and regenerative development The book argues that these social ecological design approaches can act as catalysts to develop conditions in urban settings that are beneficial for natural and human systems to thrive and flourish both in ecosystem services and social cultural systems This is particularly relevant for the design of new quality precincts or the regeneration of degraded urban spaces to promote health wellbeing and urban resilience A framework is proposed to guide the process of thinking about designing and building healthier more liveable and resilient urban environments that raise the quality of life in cities The method can be used by researchers practitioners urban

designers urban planners architects and landscape architects interested in developing their work within a social ecological perspective It can also be used by local governments and agencies to underpin policy making and by educational institutions to prepare graduates with necessary skills to respond to current and future built environment challenges

**Design for Regenerative Cities and Landscapes** Rob Roggema, 2022-05-06 This book discusses the way to design and plan for regenerative cities and landscapes Where sustainability aims to safeguard the resources for future generations and the resilience concept focuses on dealing with shocks to keep the system functioning regeneration aims to give back more than it takes from the system This principle is often used in analytical and assessment literature but not yet elaborated in a spatial planning and design context which this book does It offers insights from a range of perspectives spatial scales such as the country level neighbourhood public space streets and the building levels scientific fields and continents amongst which Africa Oceania and Europe

*Revising Smart Cities with Regenerative Design* Zaheer Allam, Peter Newman, 2023-04-12 This book presents a road map to urban regeneration through the contemporary concept of smart cities It investigates why the concept has gained adoption as it has but until now it has been geared towards a profit making venture by large corporations and ignoring the economic aspirations of smaller companies and city councils The technologies can provide enhanced liveability levels if the concept is redefined This work will be of interest to academics and policy makers looking at exploring how to drive urban regeneration in a sustainable and inclusive fashion while supporting local economies It presents a case study of Port Louis Mauritius with unique insights and data Academics policy makers and urban developers could potentially adopt the model and calibrate it to various cities and quantify the economic and social benefits
