Moll, 2004-04-08 The underlying theme of this book is that a widespread taxonomically diverse group of animals important both from ecological and human resource perspectives remains poorly understood and in decline while receiving scant attention from the ecological and conservation community This volume proposes a comprehensive overview of the world's river turtles ecology conservation and management It begins with a categorization of taxa which inhabit flowing water habitats followed by information on their evolutionary and physical diversity and biogeography Within the framework of ecology the authors discuss the composition of river turtle communities in different types of lotic habitats and regions population dynamics movements reproductive characteristics and behavior predators and feeding relationships In a conservation and management section the authors identify and evaluate the nature and intensity of factors which threaten river turtle survival almost all of which involve direct human exploitation or indirect effects of human induced habitat alteration and degradation They then list and evaluate the various schemes which have been proposed or employed to halt declines and restore populations and make recommendations for future management plans for specific species and regions In closing they state their viewpoint concerning future research directions and priorities and an evaluation of future prospects for survival of the world's river turtle species **Mississippi and Illinois Rivers Pools 24-26 (MO,IL)**, 1976 Dams and Geomorphology P.J. Beyer, 2005-12-19 Dams profoundly impact the geomorphology of rivers by altering the natural patterns of water sediment and energy flow in rivers These changes have a largely negative impact on aquatic and riparian ecosystems upstream and downstream of the dam Natural dams also impact river geomorphology although with

positive and negative repercussions for aquatic and riparian organisms In 2002 the 33rd Binghamton Geomorphology Symposium convened under the theme Dams and Morphology and featured invited papers and contributed posters on topics of natural dams artificial dams and dam removal Fourteen of these papers have been included in this volume *Man and River Systems* Josselin Garnier, J.-M. Mouchel, 2013-04-17 The volume focuses on the ecological functioning of rivers which has received less attention than functioning of lakes and reservoirs The selected papers cover a large range of topics relating to aquatic communities eutrophication nutrient dynamics and organic pollution erosion and sediment transport and fate of micropollutants at the basin scale Integrated approaches developed in order to study the ecological functioning of fluvial systems perturbed by human activity are presented This functioning is analysed from the point of view of fundamental research but insights into system management are not neglected This book will be of interest to researchers in the field of aquatic ecology river system functioning and water surface pollution to postgraduate students to the institutions involved in water resource management and to the drinking water and waste water treatment industries It draws information from many large river systems in the world Ecology of Streams and Rivers Eugene Angelier, 2019-05-07 Aiming to describe the role of dominant ecological factors and of human activities on the organisms of running water and the functioning of the ecosystem this work covers the few European water courses that are well known in ecological studies **The Rivers Handbook** Peter P. Calow, Geoffrey E. Petts, 2009-07-08 Fast changing legislation and increasing environmental awareness within the non scientific community demands that the modern approach to the management of rivers and water resources should be based on a sound understanding and application of the scientific and ecological principles that underlie freshwater processes In two volumes The Rivers Handbook offers an expert and exhaustive insight into the principles methods and tools of modern river management always within an integrated and environmentally acceptable framework This second volume develops the principles and philosophies expounded in the first volume into the management sphere organizing the approach around problems diagnosis and treatment A fully comprehensive reference to sound methods of modern river management The ideal information resource for all river managers Comparative Reservoir Limnology and Water Quality Management M. Straskraba, J.G. Tundisi, A.
