Rivers Keith Richards, 2024-04-01 Originally published in 1982 this book presents a detailed review of alluvial river form and process and integrates the distinct but related approaches of geomorphologists geologists and engineers to the subject It outlines the environmental catchment factors that control the development of channel equilibrium and provides a detailed account of the sediment transport processes that represent the physical mechanisms by which channel adjustment occurs Where possible it evaluates theoretical analyses in the context of the empirical evidence Rivers should prove a valuable textbook for geomorphology students on advanced undergraduate courses on river behaviour and will also be of interest to students of hydraulics and sedimentology and to those concerned with civil and environmental engineering river management and channel design maintenance and management in the water industry *Rivers, Form and Process in*

Fluvial Forms and Processes David Knighton, 2014-04-08 David Knighton's best selling book looks at the wide range of forms developed by natural rivers and the processes responsible for that development The book combines empirical and theoretical approaches and provides a critical assessment of the many schools of thought which have emerged for dealing with adjustment in the fluvial system It is fully illustrated throughout by a superb range of figures photographs and tables Starting with the network scale the book examines the interaction of hillslopes drainage networks and channels and goes on to considerations of catchment hydrology and catchment denudation Fluvial processes are analysed in detail from the mechanics of flow to sediment transport and deposition Detailing the major components of river channels the book examines the nature of river adjustment particularly with respect to equilibrium concepts and concludes with a look at channel changes through time affected by flood discharges climatic change and human activities River Confluences, Tributaries and the Fluvial Network Stephen Rice, Andre Roy, Bruce Rhoads, 2008-07-31 River Confluences and the Fluvial Network brings together state of the art thinking on confluence dynamics tributary impacts and the links between processes at these scales and river network functions The book is unique in focus content scope and in bringing together engineering ecological and geomorphological approaches to the three key areas of river system science Taking a global approach this multi

The Ganges Water Diversion: Environmental Effects and Implications M. Monirul Qader Mirza,2006-02-03 This book deals with environmental effects on both sides of the border between Bangladesh and India caused by the Ganges water diversion This issue came to my attention in early 1976 when news media in Bangladesh and overseas began publications of articles on the unilateral withdrawal of a huge quantity of water from the Ganges River through the commissioning of the Farakka Barrage in India I

first pursued the subject professionally in 1984 while working as a contributor for Bangladesh Today Holiday and New Nation During the next two decades I followed the protracted hydro political negotiations between the riparian countries in the Ganges basin and I traveled extensively to observe the environmental and ecological changes in Bangladesh as well as India that occurred due to the water diversion The Ganges one of the longest rivers of the world originates at the Gangotri glacier in the Himalayas and flows across the plains of North India Eventually the river splits into two main branches and empties into the Bay of Bengal The conflict of diversion and sharing of the Ganges water arose in the middle of the last century when the government of India decided to implement a barrage at Farakka to resolve a navigation problem at the Kolkata Port

landscape systematics *Riverbank Erosion Hazards and Channel Morphodynamics* Sourav Dey, Sujit Mandal, 2022-06-30

This book explores fluvial processes and their consequences on river dynamics in India. It discusses the integration of geomorphic, hydrologic, and socio-economic data with various policies and decisions regarding sustainable river basin management. The volume looks at the origin and development of streams, chronology of fluvial geomorphology, fluvial system concept, process-form interaction, river dynamics, channel migration, flow regime, channel types, and hydraulic and morphometric parameters, and explains how changing hydro-geomorphological dynamics have influenced land use patterns, nature of fluids, behaviour of floods, etc. It examines channel migration vulnerability and bank erosion hazard vulnerability of the Torsa River in the eastern region of India as a case study using channel migration zone and Bank Erosion Hazard Index models. The book presents a new research framework based on field surveys, scientific investigations, and analytical techniques and methods to interpret key geoinformatics data. With its extensive illustrations, this book will be useful to students, teachers, and researchers of geography, earth sciences, environmental geology, and environment and disaster management. It will also interest geographers, civil engineers, hydrologists, geomorphologists, planners, and other individuals and organizations working on fluvial processes and riverbank erosion problems globally.

The SAGE Handbook of Geomorphology Kenneth J. Gregory, Andrew S. Goudie, 2011-06-13. Geomorphology is the study of the Earth's diverse physical land surface features and the dynamic processes that shape these features. Examining natural and anthropogenic processes, *The SAGE Handbook of Geomorphology* is a comprehensive exposition of the fundamentals of geomorphology that examines form, process, and applications of the discipline. Organized into five substantive sections, the Handbook is an overview of Foundations and Relevance, including the nature and scope of geomorphology, the origins and development of geomorphology, the role and character of theory in geomorphology, geomorphology and environmental management, and geomorphology and society. Techniques and Approaches, including observations and experiments, geomorphological mapping, the significance of models, process and form, dating surfaces and sediment, remote sensing in geomorphology, GIS in geomorphology, biogeomorphology, human activity, Process and Environment, including the evolution of regolith, weathering, fluids, flows, and fluxes, sediment transport and deposition, hill slopes, riverine environments, glacial geomorphology, periglacial environments, coastal environments, aeolian environments, tropical environments, karst and karst processes, Environmental Change, including landscape evolution and tectonics, interpreting quaternary environments, environmental change, disturbance, and responses to geomorphic systems, Conclusion, including challenges and perspectives, and a concluding review. The Handbook has contributions from 48 international authors and was initially organized by the International Association of Geomorphologists. This will be a much-used and much-cited reference for researchers in Geomorphology, Physical Geography, and the Environmental Sciences.
