Mineral Deposit Research: Meeting the Global Challenge

Jingwen Mao, Frank P. Bierlein, 2008-01-08 In June 1965 a small group of European economic geologists gathered in Heidelberg Germany at the invitation of Professor G C Amstutz and decided to establish the Society for Geology Applied to Mineral Deposits SGA and to start a journal to be called Mineralium Deposita The first issue of the journal came out in May 1966 and has now matured to a leading journal in economic geology The first Biennial SGA Meeting was held successfully in Nancy France in 1991 with subsequent meetings in Grenada Spain 1993 Prague Czech Republic 1995 Turku Finland 1997 London United Kingdom 1999 Krakov Poland 2001 and Athens Greece 2003 In 2002 the SGA Council decided that its 8 Biennial Meeting in 2005 should be held in Beijing China making this the first Biennial Meeting to be convened outside the rope Significantly 2005 also marks the 40 anniversary of the SGA The decision to host this year's premier meeting in Beijing reflects the Society's successful transition from its traditional European focus to a truly global organization with 24% of SGA members situated in North America 13% in Australia and Oceania and 5% in Asia Over the last 27 years China has made dramatic progress towards political and economic reform and opening the nation to the outside world China's rapid economic development demands increasing amounts of minerals fuels and materials and this is currently a major driver for the global economic markets

Understanding Mineral Deposits Kula Misra, 2012-12-06 Mineral deposits have supplied useful or valuable material for human consumption long before they became objects of scientific curiosity or commercial exploitation In fact the earliest human interest in rocks was probably because of the easily accessible useful e.g red pigment in the form of earthy hematite or valuable e.g native gold and gemstones materials they contained at places In modern times the study of mineral deposits has evolved into an applied science employing detailed field observations sophisticated laboratory techniques for additional information and computer modeling to build complex hypotheses Understanding concepts that would someday help geologists to find new mineral deposits or exploit the known ones more efficiently have always been and will continue to be at the core of any course on mineral deposits but it is a fascinating subject in its own right even for students who do not intend to be professional economic geologists I believe that a course on mineral deposits should be designed as a capstone course that illustrates a comprehensive application of concepts from many other disciplines in geology mineralogy stratigraphy and sedimentation structure and tectonics petrology geochemistry paleontology geomorphology etc This book is intended as a text for such an introductory course in economic geology primarily for senior undergraduate and graduate students in colleges and universities It should also serve as a useful information resource for professional economic geologists

Hydrothermal Mineral Deposits Franco Pirajno, 2012-12-06 This book is intended primarily for exploration geologists and post graduate students attending specialist courses in mineral exploration Exploration geologists are engaged not only in the search for new mineral deposits but also in the extension and reassessment of existing ones To succeed in these tasks the exploration geologist is required to be a generalist of the Earth sciences rather than a specialist The exploration geologist needs to be familiar with most aspects of the geology of ore

deposits and detailed knowledge as well as experience play an all important role in the successful exploration for mineral commodities In order to achieve this it is essential that the exploration geologist be up to date with the latest developments in the evolution of concepts and ideas in the Earth sciences This is no easy task as thousands of publications appear every year in an ever increasing number of journals periodicals and books For this reason it is also difficult at times to locate appropriate references on a particular mineral deposit type although this problem is alleviated by the existence of large bibliographic data bases of geological records abstracts and papers on computers During my teaching to explorationists and indeed during my years of work as an explorationist the necessity of having a text dealing with the fundamental aspects of hydrothermal mineral deposits has always been compelling Metallic mineral deposits can be categorised into three great families namely 1 magmatic 2 sedimentary and residual 3 hydrothermal U.S. Geological Survey Bulletin ,1983

Microfacies of Carbonate Rocks Erik Flügel,2010-07-08 This unparalleled reference synthesizes the methods used in microfacies analysis and details the potential of microfacies in evaluating depositional environments and diagenetic history and in particular the application of microfacies data in the study of carbonate hydrocarbon reservoirs and the provenance of archaeological materials Nearly 230 instructive plates 30 in color showing thin section photographs with detailed explanations form a central part of the content Helpful teaching learning aids include detailed captions for hundreds of microphotographs boxed summaries of technical terms many case studies guidelines for the determination and evaluation of microfacies criteria self testing exercises for recognition and characterization skills and more Mineral Deposits at the Beginning of the 21st Century A. Piestrzynski,2022-05-02 The Joint 6th Biennial SGA SEG Meeting was held in Krakow in August 2001 This volume contains 274 extended abstracts grouped thematically under 18 session titles covering topics such as lead zinc deposits metamorphism affecting mineral deposits and the environmental aspects of mining
