It addresses various aspects of structural seismology and its applications to other fields of Earth sciences. The book is organized into four parts. The first part principally covers theoretical developments and seismic data analysis techniques from the end of the nineteenth century until the present with the main emphasis on the development of instrumentation and its deployment. The second part reviews the status of knowledge on the structure of the Earth's shallow layers starting with a global review of the Earth's crustal structure. The third part focuses on the Earth's deep structure divided into its main units: the upper mantle, the transition zone, and upper mantle discontinuities, the D region at the base of the mantle, and the Earth's core. The fourth part comprises two chapters which discuss constraints on Earth structure from fields other than seismology: mineral physics and geodynamics. Self-contained volume starts with an overview of the subject then explores each topic with in-depth detail. Extensive reference lists and cross references with other volumes to facilitate further research. Full color figures and tables support the text and aid in understanding. Content suited for both the expert and non-expert. **Seismic Reflection Profiles in the Western Pacific, 1965-1974** Sadanori Murauchi, Toshio Asanuma, 1977 Since 1965 Seismic reflection profiles have been recorded as part of the seismic refraction and reflection studies conducted by one of the authors on behalf of the Ocean Seismic Research Group of Japan Sedimentologic consequences of convulsive geologic events Geological Society of America.
