Louis Agassiz A Life In Science:

Louis Agassiz Edward Lurie,1988-10-01 A giant of nineteenth century natural history study Louis Agassiz made major contributions to modern knowledge of geology paleontology and zoology Agassiz's fame in America was largely as a popularizer of natural history and teacher of advanced students Founding the Museum of Comparative Zoology at Harvard was his lasting teaching and research achievement and the Smithsonian Institution and National Academy of Sciences benefited from his impulse to professionalize science A life long opponent of the theory of evolution Agassiz affirmed the magnificence of God's plan to all who would study nature not books **Life, Letters, and Works of Louis Agassiz** Jules Marcou,1896 **Life, Letters, and Works of Louis Agassiz** Jules Marcou,1972 **Louis Agassiz; His Life and Work** Charles Frederick Holder,1893 **Louis Agassiz** Christoph Irmscher,2013 A provocative new life restoring Agassiz America's most famous natural scientist of the 19th century inventor of the Ice Age stubborn anti Darwinist to his glorious troubling place in science and culture **Louis Agassiz**,1893 **Louis Agassiz** Elizabeth Cabot Cary Agassiz,1885

Encyclopedia of Paleontology Ronald Singer,2019-06-04 The Encyclopedia of Paleontology is designed to address the shortage of general reference works on both vertebrate and invertebrate paleontology and to serve the needs of students and lay persons interested in the field As the encyclopedia aims to provide basic information the majority of the 350 entries are devoted to explanations of paleontological concepts and techniques examinations of the evolutionary development of particular organisms and biological features profiles of major discoveries and biographies of leading scientists Each entry includes an essay and a further reading list An international team of 200 leading experts in the field has prepared the illustrations and the essays which range from concise descriptions to comprehensive discussions **The Poetics of**

Natural History Christoph Irmscher,2019-09-08 Newly expanded and in full color this groundbreaking book argues that early American natural historians had a distinctly poetic sensibility producing work that had a visionary intensity Covering naturalists from John James Audubon to PT Barnum it considers not only natural history writing but also illustrations photographs and actual collections of flora and fauna Photography and all associated expenses made possible by a generous grant from Furthermore a program of the J M Kaplan Fund **Romanticism and the Sciences** Dr. Andrew Cunningham,Nicholas Jardine,1990-06-28 This book presents a series of essays which focus on the role of Romantic philosophy and ideology in the sciences *German Art History and Scientific Thought* Mitchell B. Frank,2017-07-05 A fresh contribution to the ongoing debate between Kunstwissenschaft scientific study of art and Kunstgeschichte art history this essay collection explores how German speaking art historians of the late nineteenth and early twentieth century self consciously generated a field of study Prominent North American and European scholars provide new insights into how a mixing of diverse methodologies took place in order to gain a more subtle and comprehensive understanding of how art history became institutionalized and legitimized in Germany One common assumption about early art historical writing in

Germany is that it depended upon a simplistic and narrowly defined formalism This book helps to correct this stereotype by demonstrating the complexity of discussion surrounding formalist concerns and by examining how German speaking art historians borrowed incorporated stole and made analogies with concepts from the sciences in formulating their methods In focusing on the work of some of the well known fathers of the discipline such as Alois Riegl and Heinrich W Ifflin as well as on lesser known figures the essays in this volume provide illuminating and sometimes surprising treatments of art history s prior and understudied interactions with a wide range of scientific orientations from psychology sociology and physiognomics to evolutionism and comparative anatomy

Early American Nature Writers Daniel Patterson,2007-11-30 At a time when the environment is of growing concern to students and general readers nature writing is especially meaningful This book profiles the literary careers of 52 early American nature writers such as John James Audubon Ralph Waldo Emerson Caroline Stansbury Kirkland Thomas Jefferson Henry David Thoreau and Mabel Osgood Wright Each entry is written by an expert contributor and discusses the writer s life and works Entries close with primary and secondary bibliographies and the encyclopedia ends with suggestions for further reading Global warming pollution and other issues have made the environment a topic of constant discussion these days Many environmental concerns were treated by early American nature writers who recognized the beauty of the natural world in an age of commercial expansion Some of the most famous writers of the 18th and 19th centuries wrote about nature and their works are stylistic masterpieces At a time when students are being encouraged to read and write about nonfiction these masterworks of early American nature writing are all the more important This book gives students and general readers a welcome introduction to early American nature writers

The Scientific Method Henry M. Cowles,2020-04-14 The surprising history of the scientific method from an evolutionary account of thinking to a simple set of steps and the rise of psychology in the nineteenth century The idea of a single scientific method shared across specialties and teachable to ten year olds is just over a hundred years old For centuries prior science had meant a kind of knowledge made from facts gathered through direct observation or deduced from first principles But during the nineteenth century science came to mean something else a way of thinking The Scientific Method tells the story of how this approach took hold in laboratories the field and eventually classrooms where science was once taught as a natural process Henry M Cowles reveals the intertwined histories of evolution and experiment from Charles Darwin s theory of

natural selection to John Dewey's vision for science education Darwin portrayed nature as akin to a man of science experimenting through evolution while his followers turned his theory onto the mind itself Psychologists reimagined the scientific method as a problem solving adaptation a basic feature of cognition that had helped humans prosper This was how Dewey and other educators taught science at the turn of the twentieth century but their organic account was not to last Soon the scientific method was reimagined as a means of controlling nature not a product of it By shedding its roots in evolutionary theory the scientific method came to seem far less natural but far more powerful This book reveals the origin of a fundamental modern concept Once seen as a natural adaptation the method soon became a symbol of science's power over nature a power that until recently has rarely been called into question

Louis Agassiz Elizabeth Cabot Cary Agassiz, 1885 Women in the Biological Sciences Carol A. Biermann, Louise S. Grinstein, Rose K. Rose, 1997-07-16 Biology textbooks and books on the history of science generally give a limited picture of the roles women have played in the growth and development of the biological sciences mentioning primarily the Nobel laureates This book provides a definitive archival collection of essays on a larger group of women profiling both their work and their lives The volume includes 65 representative women from different countries and eras and from as many branches of biological investigation as possible In addition to biographical information and an evaluation of the woman's career and significance each entry provides a full bibliographic listing of works by and about the subject The volume includes entries on women who have gained recognition through attainment of advanced degrees despite familial and societal pressures innovative research results influence exerted in teaching and guidance of students active participation and leadership in professional societies extensive scholarly

publication participation on journal editorial boards extensive field experience and influence on public and political scientific policymaking A woman was considered eligible for inclusion if she met several of these criteria Providing a historical perspective the book is limited to women who were born before 1930 or are deceased **The New Science of Geology**

Martin J.S. Rudwick, 2023-04-14 The science of geology was constructed in the decades around 1800 from earlier practices that had been significantly different in their cognitive goals In the studies collected here Martin Rudwick traces how it came to be recognised as a new kind of natural science because it was constituted around the idea that the natural world had its own history The earth had to be understood not only in relation to unchanging natural laws that could be observed in action in the present but also in terms of a pre human past that could be reliably known even if not directly observable and its traces only fragmentarily preserved In contrast to this radically novel sense of nature s own contingent history the earth s unimaginably vast timescale was already taken for granted by many naturalists though not yet by the wider public and the concurrent development of biblical scholarship precluded any significant sense of conflict with religious tradition A companion volume Lyell and Darwin Geologists Studies in the Earth Sciences in the Age of Reform was published in 2005

The Cambridge History of Science: Volume 6, The Modern Biological and Earth Sciences David C. Lindberg, Peter J. Bowler, Ronald L. Numbers, Roy Porter, 2003 This book in the highly respected Cambridge History of Science series is devoted to the history of the life and earth sciences since 1800 It provides comprehensive and authoritative surveys of historical thinking on major developments in these areas of science on the social and cultural milieus in which the knowledge was generated and on the wider impact of the major theoretical and practical innovations The articles are written by acknowledged experts who provide concise accounts of the latest historical thinking coupled with guides to the most important recent literature In addition to histories of traditional sciences the book covers the emergence of newer disciplines such as genetics biochemistry and geophysics The interaction of scientific techniques with their practical applications in areas such as medicine is a major focus of the book as is its coverage of controversial areas such as science and religion and environmentalism
