

Package Development :: CHEAT SHEET

Package Structure

A package is a convention for organizing files into directories. This cheat sheet shows how to work with the 7 most common parts of an R package:

There are multiple packages useful to package development, including **usethis** which handily automates many of the more repetitive tasks. Load and install **devtools** which wraps together several of these packages to access everything in one step.

Getting Started

Once per machine:

- Get set up with `use_r_profile()`

```
if (interactive()) {
  require("devtools", quietly = TRUE)
  # automatically attaches usethis
}
```

- `create_github_token()` – Set up Github credentials
- `git_vacillate()` – Ignores common special files

Once per package:

- `use_git()` – Activate git
- `use_github()` – Connect to Github
- `use_github_actions()` – Set up automated checks

Having problems with git? Get a situation report with `git_sitrep()`.

Workflow

- `load_all()` (Ctrl/Cmd + Shift + L) – Load code
- `document()` (Ctrl/Cmd + Shift + D) – Rebuild docs and NAMESPACE
- `test()` (Ctrl/Cmd + Shift + T) – Run tests
- `check()` (Ctrl/Cmd + Shift + E) – Check complete package

R/

All of the R code in your package goes in `R/`. A package with just an `R/` directory is still a very useful package.

- Create a new package project with `create_package("path/to/name")`.
- Create R files with `use_r("file-name")`.

- Follow the tidyverse style guide at style.tidyverse.org
- Click on a function and press **F2** to open its definition
- Find a function or file with **Ctrl + ,**

DESCRIPTION

The `DESCRIPTION` file describes your work, sets up how your package will work with other packages, and applies a license.

- Pick a license with `use_mit_license()`, `use_gpl_license()`, `use_proprietary_license()`.
- Add packages that you need with `use_package()`.

Import packages users of your package need. It will install them when it installs your package.

Suggest packages that developers of your package need. Users can install or not, as they like.

NAMESPACE

The `NAMESPACE` file helps you make your package self-contained. It won't interfere with other packages, and other packages won't interfere with it.

- Export functions for users by placing `@export` in their roxygen comments.
- Access objects from other packages with `package::object` or `@importFrom package object` (recommended) or `@import package` (use with caution).
- Call `document()` to generate `NAMESPACE` and `load_all()` to reload.

DESCRIPTION	NAMESPACE
