Sustainable Postharvest Technologies for Fruits and Vegetables Sajid Ali, Shabir Ahmad Mir, B.N. Dar, Shaghef Ejaz, 2024-08-30

Fruits and vegetables commonly termed as fresh produce are an important component of the human diet as these provide various beneficial and essential health related compounds Nevertheless fresh produce is susceptible to postharvest deterioration and decay along with loss of certain nutrients due to inappropriate storage conditions and lack of standard postharvest technologies In addition the short shelf life is considered another major constraint that must be extended after harvest to ensure a wider availability window of the fresh produce for consumers From this perspective the use of postharvest approaches is considered imperative to reduce the deterioration of harvested fresh produce in order to extend their storage and shelf life potential on a sustainable basis

Sustainable Postharvest Technologies for Fruits and Vegetables covers various aspects of postharvest technologies with major developments over the recent past and provides a way forward for the future The sustainable use of various technologies and elicitors could be adapted from farm to fork in order to conserve the eating quality of fresh produce Therefore this book covers various sustainable postharvest treatments and technologies that could be considered highly effective for the delay of postharvest senescence and deterioration Among the various technologies the use of preharvest treatments controlled atmosphere dynamic control atmosphere modified atmosphere and hypobaric conditions has tremendous potential for the fresh fruits and vegetables industry In the same way cold plasma pulsed light ultraviolet light ultrasound technology nanoemulsions nano packaging electrolyzed water high pressure processing ozone gas irradiations edible coatings vacuum packaging and active packaging with slow releasing compounds along with nanotechnology are highly practicable and possesses tremendous potential to be used in the maintenance of overall eating quality and storage life extension of the fresh produce

Fruit and Vegetable Processing Wim Jongen, 2002-08-13 Fruit and vegetables are both major food products in their own right and key ingredients in many processed foods. There has been growing research on their importance to health and techniques to preserve the nutritional and sensory qualities desired by consumers. This major collection summarises some of the key themes in this recent research. Part one looks at fruit vegetables and health. There are chapters on the health benefits of increased fruit and vegetable consumption antioxidants and improving the nutritional quality of processed fruits. Part two considers ways of managing safety and quality through the supply chain. A number of chapters discuss the production of fresh fruit and vegetables looking at modelling the use of HACCP systems and ways of maintaining postharvest quality. There are also two chapters on instrumentation for measuring quality. Two final chapters look at maintaining the safety and quality of processed fruit and vegetables. Part three reviews technologies to improve fruit and vegetable products. Two chapters consider how to extend the shelf life of fruits and vegetables during cultivation. The following three chapters then consider how postharvest handling can improve quality covering minimal processing new modified atmosphere packaging techniques and the use of edible coatings. Two final chapters discuss two major recent technologies in processing fruit and vegetables high pressure processing and the use of vacuum technology. With its distinguished editor and international team of contributors Fruit and vegetable processing provides an authoritative review of key research on measuring and improving the quality of both fresh and processed fruits and vegetables. Reviews recent research on improving the sensory nutritional and functional qualities of fruit and vegetables whether as fresh or processed products. Examines the importance of fruits and vegetables in processed foods and outlines techniques to preserve the nutritional and sensory qualities desired by consumers. Discusses two major technologies in processing fruits and vegetables high pressure processing and the use of vacuum technology.

The Produce Contamination Problem Karl Matthews, 2014-02-15 Understanding the causes and contributing factors leading to outbreaks of food borne illness associated with contamination of fresh produce is a worldwide challenge for everyone from the growers of fresh cut produce through the entire production and delivery process. The premise of The Produce Contamination Problem is that when human pathogen contamination of fresh produce occurs it is extremely difficult to reduce pathogen levels sufficiently to assure microbiological safety with the currently available technologies. A wiser strategy would be to avoid crop production conditions that result in microbial contamination to start. These critical problem oriented chapters have been written by researchers active in the areas of food safety and microbial contamination during production harvesting packing and fresh cut processing of horticultural crops and were designed to provide methods of contamination avoidance. Coverage includes policy and practices in the United States Mexico and Central America Europe and Japan. Addresses food borne contaminations from a prevention view providing proactive solutions to the

problems Covers core sources of contamination and methods for identifying those sources Includes best practice and regulatory information *Nutrient Metabolism* Martin Kohlmeier,2003-10-01 Nutrient Metabolism defines the molecular fate of nutrients and other dietary compounds in humans as well as outlining the molecular basis of processes supporting nutrition such as chemical sensing and appetite control It focuses on the presentation of nutritional biochemistry and the reader is given a clear and specific perspective on the events that control utilization of dietary compounds Slightly over 100 self contained chapters cover all essential and important nutrients as well as many other dietary compounds with relevance for human health An essential read for healthcare professionals and researchers in all areas of health and nutrition who want to access the wealth of nutrition knowledge available today in one single source Key Features Highly illustrated with relevant chemical structures and metabolic pathways Foreword by Steven Zeisel Editor in chief of the Journal of Nutritional Biochemistry First comprehensive work on the subject **Nutraceutical and Functional Food Regulations in the United States and Around the World** Debasis Bagchi,2008-07-18 Globalization of the nutraceutical and functional food industries presents significant challenges not the least of which is the regulatory variance between countries active in the marketplace Nutraceutical and Functional Food Regulations in the United States and Around the World has been written by eminent experts in the field with the specific intention of addressing these important considerations Beginning with insights into the scope importance and growing opportunities in these industries the book demonstrates the global scenario on the acceptance and demand for nutraceuticals and functional foods It explores the regulatory hurdles and claim substantiation of these foods and dietary supplements as well as the intricate aspects of manufacturing procedures Including regulations from South America Canada European Union Australia New Zealand Africa Japan Korea China India and Southeast Asia as well as the United States Nutraceutical and Functional Food Regulations in the United States and Around the World provides a valuable resource for understanding the key considerations of operating in this rapidly expanding area Overview of nutraceutical and functional food regulations around the world Discusses the importance of GRAS status and DSHEA regulations Provides insight on quality manufacturing techniques cGMP and standardized analytical techniques Includes salient features on overcoming regulatory hurdles Addresses the importance of safety efficacy and human clinical studies for worldwide acceptance Highlights anti terrorism safety assurance through traceability Explores the significance of intellectual property trademark and branding on marketing **Gluten-Free Cereal Products and Beverages** Elke Arendt,Fabio Dal Bello,2011-04-28 Gluten Free Cereal Products and Beverages is the only book to address gluten free foods and beverages from a food science perspective It presents the latest work in the development of gluten free products including description of the disease the detection of gluten and the labeling of gluten free products as well as exploring the raw materials and ingredients used to produce gluten free products Identifying alternatives to the unique properties of gluten has proven a significant challenge for food scientists and for the 1% of the world s population suffering from the immune mediated
