## **Rational Numbers:**

**THE RATIONAL NUMBERS.** ,1968      **Rational Numbers to Linear Equations** Hung-Hsi Wu,2020-06-18 This is the first of three volumes that together give an exposition of the mathematics of grades 9 12 that is simultaneously mathematically correct and grade level appropriate The volumes are consistent with CCSSM Common Core State Standards for Mathematics and aim at presenting the mathematics of K 12 as a totally transparent subject The present volume begins with fractions then rational numbers then introductory geometry that can make sense of the slope of a line then an explanation of the correct use of symbols that makes sense of variables and finally a systematic treatment of linear equations that explains why the graph of a linear equation in two variables is a straight line and why the usual solution method for simultaneous linear equations by substitutions is correct This book should be useful for current and future teachers of K 12 mathematics as well as for some high school students and for education professionals      **Rational Numbers** Thomas P. Carpenter,Elizabeth Fennema,Thomas A. Romberg,1993 Until recently there had been relatively little integration of programs of research on teaching learning curriculum and assessment However in the last few years it has become increasingly apparent that a more unified program of research is needed to acquire an understanding of teaching and learning in schools that will inform curriculum development and assessment The chapters in this volume represent a first step toward an integration of research paradigms in one clearly specified mathematical domain Integrating a number of different research perspectives is a complex task and ways must be found to reduce the complexity without sacrificing the integration The research discussed in this volume is tied together because it deals with a common content strand During the last ten years specific content domains have served as focal points for research on the development of mathematical concepts in children The areas of addition and subtraction algebra rational numbers and geometry are notable examples Whether a similar organizational structure will prevail for programs of research that integrate the study of teaching learning curriculum and assessment is an open question The perspectives presented in this volume illustrate the potential for adopting this perspective      **Rational Number Theory in the 20th Century** Władysław Narkiewicz,2011-09-02 The last one hundred years have seen many important achievements in the classical part of number theory After the proof of the Prime Number Theorem in 1896 a quick development of analytical tools led to the invention of various new methods like Brun s sieve method and the circle method of Hardy Littlewood and Ramanujan developments in topics such as prime and additive number theory and the solution of Fermat s problem Rational Number Theory in the 20th Century From PNT to FLT offers a short survey of 20th century developments in classical number theory documenting between the proof of the Prime Number Theorem and the proof of Fermat s Last Theorem The focus lays upon the part of number theory that deals with properties of integers and rational numbers Chapters are divided into five time periods which are then further divided into subject areas With the introduction of each new topic developments are followed through to the present day This book will appeal to

graduate researchers and student in number theory however the presentation of main results without technicalities will make this accessible to anyone with an interest in the area      Rational Numbers with Integers and Reals John F. LeBlanc, 1976

This unit is 1 of 12 developed for the university classroom portion of the Mathematics Methods Program MMP created by the Indiana University Mathematics Education Development Center MEDC as an innovative program for the mathematics training of prospective elementary school teachers PSTs Each unit is written in an activity format that involves the PST in doing mathematics with an eye toward application of that mathematics in the elementary school This document is one of four units that are devoted to the basic number work in the elementary school In addition to an introduction to the unit the text has sections on integers in the elementary school rational numbers in the elementary school mathematics of the rational numbers rational numbers as decimals the real number system and appendices that cover self test answers the properties of number systems and skill builder exercises MP      ,      **Maths Mate** □ **7 NEW** Madhubun, 1 It is a series of eight textbooks for Classes 1 to 8 that conforms to the vision of National Curriculum Framework and is written in accordance with the latest syllabus of the CBSE 2 Learning Objectives Lists well what a learner will know and be able to do after studying the chapter 3 Let s Recall Refreshes the concepts learnt in the form of a revision exercise to brush up the concepts taught in previous chapters or grades 4 Let s Begin Introduction to the chapter 5 My Notes Tips to help the learner remember the important points formulae taught in the chapter 6 Let s Try Simple straight forward questions for quick practice while studying any topic based on the first two levels of Bloom s Taxonomy Knowledge and Understanding 7 Error Alarm Common mistakes which learners commit often along with the correct way of doing the same 8 Know More Additional information for the learners relating to the concepts learnt in the chapter 9 Maths in My Life includes questions relating Maths to daily life and which can help relate the topic with the environment life around us 10 Tricky Maths Challenge questions to help the learners build thinking skills and reasoning skills by solving tricky questions 11 Project Work Projects which can help learners connect Math with our daily life or that take the concepts learnt to a new level 12 Concept Map Summary points to list the important concepts learnt in the chapter in a crisp form 13 Test Zone Revision exercise of the concepts learnt in the chapter This includes both objective and subjective type of questions 14 Mental Maths Maths problems for performing faster calculations mentally 15 Maths Master Involves deep critical thinking of learners about any topic concept relation fact or anything related to that chapter May have open ended questions or extension of the topic 16 Application in Real Life Every chapter in each book also explains how and where it is used in daily life 17 In the Lab Math lab activities for helping the learners understand the concepts learnt through hands on experience 18 Practice Zone Chapter wise practice sheets includes subjective questions for additional practice which are a part of each book      *SELF-HELP TO I.C.S.E.*
