**Working Paper Series**, 2001 **Realistic Simulation of Financial Markets** Hajime Kita, Kazuhisa Taniguchi, Yoshihiro Nakajima, 2016-07-06 This book takes up unique agent based approaches to solving problems related to stock and their derivative markets Toward this end the authors have worked for more than 15 years on the development of an artificial market simulator called U Mart for use as a research and educational tool A noteworthy feature of the U Mart simulator compared to other artificial market simulators is that U Mart is an ultra realistic artificial stock and their derivative market simulator For example it can simulate arrowhead a next generation trading system used in the Tokyo Stock Exchange and other major markets as it takes into consideration the institutional design of the entire market Another interesting feature of the U Mart simulator is that it permits both human and computer programs to participate simultaneously as

traders in the artificial market In this book first the details of U Mart are explained enabling readers to install and run the simulator on their computers for research and educational purposes The simulator thus can be used for gaming simulation of the artificial market and even for users as agents to implement their own trading strategies for agent based simulation ABS The book also presents selected research cases using the U Mart simulator Here topics include automated acquisition of trading strategy using artificial intelligence techniques evaluation of a market maker system to treat thin markets such as those for small and regional businesses systemic risk analysis of the financial market considering institutional design of the market and analysis of how humans behave and learn in gaming simulation New perspectives on artificial market research are provided and the power potential and challenge of ABS are discussed As explained in this important work ABS is considered to be an effective tool as the third approach of social science an alternative to traditional literary and mathematical approaches
