Catecholamines: Basic and Clinical Frontiers Earl Usdin, 2013-09-12 Catecholamines Basic and Clinical Frontiers is a collection of papers that discusses clinical problems related to this series of compounds which includes dopamine epinephrine and norepinephrine One paper discusses the role of biogenic amines in several mental disorders such as senile dementia schizophrenia chronic alcoholism and affective disorders Another paper describes that in studies of mice the number of neurotransmitter specific neurons is under a genetic control and can be a significant determinant of species dependent variation in brain chemistry nuclear organization drug responses and spontaneous behavior One paper investigates if prostaglandins can directly alter the release or reuptake of catecholamines in the central nervous system as well as their action upon the disposition of different metabolites of dopamine and norepinephrine in brain perfusate The effects of several drugs on shock elicited fighting in rats show no significant aspects with amphetamine apomorphine phenoxybenzamine or phentolamine The use of clonidine and propranolol shows a significant inhibition of fighting while low doses of piperoxane exhibits a marked increase in fighting behavior The collection can prove beneficial for pharmacologists biochemists micro biologists cellular researchers and academicians involved in the study of physiology or neuroendocrinology

Basic Limbic System Anatomy of the Rat Leonard Hamilton, 2012-12-06 If this were a traditional textbook of neuroanatomy many pages would be devoted to a description of the ascending and descending pathways of the spinal cord and several chapters to the organization of the sensory and motor systems and perhaps a detailed discussion of the neurological deficits that follow various types of damage to the nervous system would also be included But in the first draft of this book the spinal cord was mentioned only once in a figure caption of Chapter 2 in order to illustrate the meaning of longitudinal and cross sections Later it was decided that even this cursory treatment of the spinal cord went beyond the scope of this text and a carrot was substituted as the model The organization of the sensory and motor systems and of the peripheral nervous system have received similar coverage Thus this is not a traditional text and as a potential reader you may be led to ask What s in this book for me This book is directed primarily toward those students of

behavior who are either bored or frightened by the medically oriented texts that are replete with clinical signs confusing terminology and prolix descriptions of the human brain an organ which is never actually seen in their laboratories I should hasten to add however that this text may also serve some purpose for those who read and perhaps even enjoy the traditional texts

The Complete History of the Black Death Ole Jørgen Benedictow, 2021 Completely revised and updated for this new edition Benedictow's acclaimed study remains the definitive account of the Black Death and its impact on history The first edition of The Black Death collected and analysed the many local studies on the disease published in a variety of languages and examined a range of scholarly papers The medical and epidemiological characteristics of the disease its geographical origin its spread across Asia Minor the Middle East North Africa and Europe and the mortality in the countries and regions for which there are satisfactory studies are clearly presented and thoroughly discussed The pattern pace and seasonality of spread revealed through close scrutiny of these studies exactly reflect current medical work and standard studies on the epidemiology of bubonic plague Benedictow's findings made it clear that the true mortality rate was far higher than had been previously thought In the light of those findings the discussion in the last part of the book showing the Black Death as a turning point in history takes on a new significance OLE J BENEDICTOW is Professor of History at the University of Oslo

The Action Plan for Australian Mammals 2012 Andrew Burbidge, Peter Harrison, John Woinarski, 2014-06-02 The Action Plan for Australian Mammals 2012 is the first review to assess the conservation status of all Australian mammals It complements The Action Plan for Australian Birds 2010 Garnett et al 2011 CSIRO Publishing and although the number of Australian mammal taxa is marginally fewer than for birds the proportion of endemic extinct and threatened mammal taxa is far greater These authoritative reviews represent an important foundation for understanding the current status fate and future of the nature of Australia This book considers all species and subspecies of Australian mammals including those of external territories and territorial seas For all the mammal taxa about 300 species and subspecies considered Extinct Threatened Near Threatened or Data Deficient the size and trend of their population is presented along with information on geographic range and trend and relevant biological and ecological data The book also presents the current conservation status of each taxon under Australian legislation what additional information is needed for managers and the required management actions Recovery plans where they exist are evaluated The voluntary participation of more than 200 mammal

experts has ensured that the conservation status and information are as accurate as possible and allowed considerable unpublished data to be included All accounts include maps based on the latest data from Australian state and territory agencies from published scientific literature and other sources The Action Plan concludes that 29 Australian mammal species have become extinct and 63 species are threatened and require urgent conservation action However it also shows that where guided by sound knowledge management capability and resourcing and longer term commitment there have been some notable conservation success stories and the conservation status of some species has greatly improved over the past few decades The Action Plan for Australian Mammals 2012 makes a major contribution to the conservation of a wonderful legacy that is a significant part of Australia's heritage For such a legacy to endure our society must be more aware of and empathetic with our distinctively Australian environment and particularly its marvellous mammal fauna relevant information must be readily accessible environmental policy and law must be based on sound evidence those with responsibility for environmental management must be aware of what priority actions they should take the urgency for action and consequences of inaction must be clear and the opportunity for hope and success must be recognised It is in this spirit that this account is offered

Restoring the Oceanic Island Ecosystem Isamu Okochi, Kazuto Kawakami, 2010-03-15 Loss of biodiversity on tropical and subtropical oceanic islands is one of the most pressing conservation issues These oceanic islands are well known for their unique fauna and flora which evolved over long periods in isolation from external perturbation However the majority of these islands in the Pacific were eventually settled by Polynesians and then by Europeans by about 200 years ago only a few island groups remained untouched The Bonin Islands are one of these groups The Bonin Island group is one of the most remote in the world The islands are located 1 000 km south of Japan off the eastern fringe of Eurasia They were first discovered by the Japanese in 1670 settled by Westerners from Hawaii in 1830 and finally recognized as a Japanese territory in 1862 on condition that previous settlers would be protected and allowed to remain with full rights Because of this complicated history the Bonins have two names
